RE: 2022 GW Sampling 4th Quarter

OrderNo.: 2212442

Dear Lesli Alexander:

Hall Environmental Analysis Laboratory received 10 sample(s) on 12/8/2022 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

A handwritten signature in black ink, appearing to read "Andy Freeman", is written over a light blue horizontal line.

Case Narrative

WO#: 2212442
Date: 1/17/2023

CLIENT: Marathon

Project: 2022 GW Sampling 4th Quarter

Analytical Notes Regarding EPA Method 8015D DRO/MRO:

The method blank had a low level detection for DRO. Samples with detections are flagged with a "B".

"S" flagged surrogates/spikes denote that the analyte recovery was outside of the standard limits.

Analytical Notes Regarding EPA Method 8270 and 8270 SIMS:

1-Methylnaphthalene, 2-Methylnaphthalene and Naphthalene were reported by EPA Method 8270 instead of EPA Method 8270SIMs because of their elevated concentrations for samples OW-57 and OW-63.

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

John Hawkins
Project Manager

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

| | |
|------------------------------|--|
| MDL | Method Detection Limit. |
| ND | Not detected at the Reporting Limit (or MDL where applicable). |
| RDL | Reported Detection Limit. |
| Rec. | Recovery. |
| RPD | Relative Percent Difference. |
| SDG | Sample Delivery Group. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| Analyte | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported. |
| Dilution | If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor. |
| Limits | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| Qualifier | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable. |
| Result | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |
| Uncertainty (Radiochemistry) | Confidence level of 2 sigma. |
| Case Narrative (Cn) | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report. |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material. |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis. |
| Sample Results (Sr) | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported. |
| Sample Summary (Ss) | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis. |

Qualifier Description

| | |
|----|---|
| P1 | RPD value not applicable for sample concentrations less than 5 times the reporting limit. |

**Enthalpy Analytical - El Dorado Hills
Work Order No. 2212123**

Mr. Andy Freeman
Hall Environmental Analytical Laboratory
4901 Hawkins NE
Albuquerque, NM 87109

Dear Mr. Freeman,

Enclosed are the results for the sample set received at Enthalpy Analytical - EDH on December 13, 2022 under your Project Name '2212442'.

Enthalpy Analytical - EDH is committed to serving you effectively. If you require additional information, please contact me at 916-673-1520 or by email at karen.volpendesta@enthalpy.com.

Thank you for choosing Enthalpy Analytical - EDH as part of your analytical support team.

Sincerely,

For

Karen L. Volpendesta
Project Manager

Enthalpy Analytical -EDH certifies that the report herein meets all the requirements set forth by NELAP for those applicable test methods. Results relate only to the samples as received by the laboratory. This report should not be reproduced except in full without the written approval of Enthalpy Analytical -EDH .

Enthalpy Analytical - EDH Work Order No. 2212123**Case Narrative****Sample Condition on Receipt:**

One groundwater sample and one aqueous sample were received and stored securely in accordance with Enthalpy Analytical - EDH standard operating procedures and EPA methodology. The samples were received in good condition and within the recommended temperature requirements. The backup bottles for the samples were received broken.

Analytical Notes:**PFAS Isotope Dilution Method**

The samples were extracted and analyzed for a selected list of PFAS using Enthalpy Analytical - EDH's PFAS Isotope Dilution Method. The results for PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Results for all other analytes include the linear isomers only.

Holding Times

The samples were extracted and analyzed within the hold times.

Quality Control

The Initial Calibration and Continuing Calibration Verifications met the acceptance criteria.

A Method Blank and Ongoing Precision and Recovery (OPR) sample were extracted and analyzed with the preparation batch. No analytes were detected in the Method Blank above the Reporting Limit. The OPR recoveries were within the method acceptance criteria.

The labeled standard recoveries for all QC and field samples were within the acceptance criteria.

RL - Reporting limit

Results reported to RL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

RL - Reporting limit

Results reported to RL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

DATA QUALIFIERS & ABBREVIATIONS

| | |
|---------|--|
| B | This compound was also detected in the method blank |
| Conc. | Concentration |
| CRS | Cleanup Recovery Standard |
| D | Dilution |
| DL | Detection Limit |
| E | The associated compound concentration exceeded the calibration range of the instrument |
| H | Recovery and/or RPD was outside laboratory acceptance limits |
| I | Chemical Interference |
| IS | Internal Standard |
| J | The amount detected is below the Reporting Limit/LOQ |
| LOD | Limit of Detection |
| LOQ | Limit of Quantitation |
| M | Estimated Maximum Possible Concentration (CA Region 2 projects only) |
| MDL | Method Detection Limit |
| NA | Not applicable |
| ND | Not Detected |
| OPR | Ongoing Precision and Recovery sample |
| P | The reported concentration may include contribution from chlorinated diphenyl ether(s). |
| Q | The ion transition ratio is outside of the acceptance criteria. |
| RL | Reporting Limit |
| RL | For 537.1, the reported RLs are the MRLs. |
| TEQ | Toxic Equivalency, sum of the toxic equivalency factors (TEF) multiplied by the sample concentrations. |
| TEQMax | TEQ calculation that uses the detection limit as the concentration for non-detects |
| TEQMin | TEQ calculation that uses zero as the concentration for non-detects |
| TEQRisk | TEQ calculation that uses ½ the detection limit as the concentration for non-detects |
| U | Not Detected (specific projects only) |
| * | See Cover Letter |

Unless otherwise noted, solid sample results are reported in dry weight. Tissue samples are reported in wet weight.

RE: 2022 GW Sampling 4th Quarter

OrderNo.: 2212630

Dear Lesli Alexander:

Hall Environmental Analysis Laboratory received 9 sample(s) on 12/9/2022 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

A handwritten signature in black ink, appearing to read "Andy Freeman", is written over a light blue horizontal line.

Case Narrative

WO#: 2212630
Date: 1/9/2023

CLIENT: Marathon

Project: 2022 GW Sampling 4th Quarter

Analytical Notes Regarding EPA Method 8015D DRO/MRO:

The method blank had a low level detection for DRO. Samples with detections are flagged with a "B".

"S" flagged surrogates/spikes denote that the analyte recovery was outside of the standard limits.

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

| | |
|------------------------------|--|
| MDL | Method Detection Limit. |
| ND | Not detected at the Reporting Limit (or MDL where applicable). |
| RDL | Reported Detection Limit. |
| Rec. | Recovery. |
| RPD | Relative Percent Difference. |
| SDG | Sample Delivery Group. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| Analyte | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported. |
| Dilution | If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor. |
| Limits | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| Qualifier | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable. |
| Result | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |
| Uncertainty (Radiochemistry) | Confidence level of 2 sigma. |
| Case Narrative (Cn) | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report. |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material. |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis. |
| Sample Results (Sr) | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported. |
| Sample Summary (Ss) | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis. |

RE: 2022 GW Sampling 4th Quarter

OrderNo.: 2212913

Dear Lesli Alexander:

Hall Environmental Analysis Laboratory received 8 sample(s) on 12/15/2022 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

A handwritten signature in black ink, appearing to read "Andy Freeman", is written over a horizontal line.

Case Narrative

WO#: 2212913
Date: 1/9/2023

CLIENT: Marathon

Project: 2022 GW Sampling 4th Quarter

Analytical Notes Regarding EPA Method 8015D DRO/MRO:

The method blank had a low level detection for DRO. Samples with detections are flagged with a "B".

"S" flagged surrogates/spikes denote that the analyte recovery was outside of the standard limits.

Analytical Notes Regarding EPA Method 8270 and 8270 SIMS:

1-Methylnaphthalene, 2-Methylnaphthalene and Naphthalene were reported by EPA Method 8270 instead of EPA Method 8270SIMs because of their elevated concentrations for samples OW-58 and DUP-12-14-22.

Analytical Notes Regarding EPA Method 8270 and 8270 SIMS:

1-Methylnaphthalene was reported by EPA Method 8270 instead of EPA Method 8270SIMs because of its elevated concentration for sample NAPI-2.

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

John Hawkins

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

| | |
|------------------------------|--|
| MDL | Method Detection Limit. |
| ND | Not detected at the Reporting Limit (or MDL where applicable). |
| RDL | Reported Detection Limit. |
| Rec. | Recovery. |
| RPD | Relative Percent Difference. |
| SDG | Sample Delivery Group. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| Analyte | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported. |
| Dilution | If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor. |
| Limits | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| Qualifier | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable. |
| Result | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |
| Uncertainty (Radiochemistry) | Confidence level of 2 sigma. |
| Case Narrative (Cn) | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report. |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material. |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis. |
| Sample Results (Sr) | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported. |
| Sample Summary (Ss) | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis. |

QualifierDescription

| | |
|----|---|
| J6 | The sample matrix interfered with the ability to make any accurate determination; spike value is low. |

RE: 2022 GW Sampling 4th Quarter

OrderNo.: 2301520

Dear Lesli Alexander:

Hall Environmental Analysis Laboratory received 1 sample(s) on 1/13/2023 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ✓ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J- | The result is an estimated concentration, but may be biased low |
| J+ | The result is an estimated concentration, but may be biased high |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 363 data points. The data completeness calculation does not include any submitted blank sample results. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformance related to this data set.

Method 8270: "S" flagged surrogates denote low surrogate recoveries due to matrix interferences/sample dilution.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No

If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

D – Sample diluted due to matrix.

E – Estimated value. *This laboratory flag was applied only to QC sample results in the laboratory report, and qualification of sample data was not required.*

H – Holding times for preparation or analysis exceeded.

J – Analyte detected below quantitation limits

J6 – The sample matrix interfered with the ability to make any accurate determination; spike value is low.

P1 – RPD value not applicable for sample concentrations less than 5 times the reporting limit.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by courier, and custody was maintained at all times.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| <u>Method</u> | <u>Sample(s)</u> | <u>Analyte(s)</u> | <u>Dilution Factor</u> |
|---------------|--------------------------------------|------------------------------|------------------------|
| 245.1 | East LDU | Total Mercury | 5 |
| 200.8 | East LDU, West LDU, DUP 3-18-22 | Total and Dissolved Metals | 5 |
| 200.7 | East LDU | Total and Dissolved Chromium | 10 |
| 200.7 | East LDU | Total and Dissolved Nickel | 10 |
| 9223B | STP-1 to EP-2 | E.Coli | 10 |
| 8015 | East LDU | GRO, DRO MRO | 10 |
| 8260B | East LDU | VOCs | 10 |
| 8270C | East LDU, STP-1 to EP-2, DUP 3-18-22 | SVOCs | 10 |

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? No

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.

The CoC requested total and dissolved metals using Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

| VALIDATION CRITERIA CHECKLIST | | | | | | | | | | | | | | | | | |
|--|---------------|--------|---------------|-------|---------------|-------|---------------|-------|--------------|-------|---------------|--------|-----------|-------|-----|--------|------------|
| 6. Were samples received in good condition within method-specified requirements? | Yes | | | | | | | | | | | | | | | | |
| <p>Comments: Samples were received on ice, in good condition, and with the cooler temperatures within the recommended temperature range of 4°C ± 2°C at 2.1°C, 2.3°C, and 2.4°C as noted on the CoC and the <i>Sample Log-in Check List</i>.</p> <p>Samples transferred to Pace National were received in good condition with the cooler temperature within the recommended range at 2.3°C as noted on the CoC.</p> | | | | | | | | | | | | | | | | | |
| 7. Were samples extracted/digested and analyzed within method-specified or technical holding times? | Yes | | | | | | | | | | | | | | | | |
| <p>Comments: The samples were extracted/digested and analyzed within method-specific holding times.</p> | | | | | | | | | | | | | | | | | |
| 8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. | Yes | | | | | | | | | | | | | | | | |
| <p>Comments: The results were reported in concentration units of micrograms per liter (µg/L), milligrams per liter (mg/L), and most probable number per 100 mL (MPN/100mL), which were acceptable for the sample matrix and the analyses requested.</p> | | | | | | | | | | | | | | | | | |
| 9. Did the laboratory provide any specific initial and/or continuing calibration results? | No | | | | | | | | | | | | | | | | |
| <p>Comments: Initial and continuing calibration data were not included as part of this data set.</p> | | | | | | | | | | | | | | | | | |
| 10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? | N/A | | | | | | | | | | | | | | | | |
| <p>Comments: Initial and continuing calibration data were not included as part of this data set.</p> | | | | | | | | | | | | | | | | | |
| 11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | Yes | | | | | | | | | | | | | | | | |
| <p>Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.</p> | | | | | | | | | | | | | | | | | |
| 12. Were target analytes reported as not detected in the laboratory blanks? | No | | | | | | | | | | | | | | | | |
| <p>Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.</p> <table border="1"> <thead> <tr> <th>Method</th> <th>Analyte</th> <th>Batch</th> <th>Concentration</th> </tr> </thead> <tbody> <tr> <td>245.1</td> <td>Total Mercury</td> <td>66396</td> <td>0.00014 mg/L</td> </tr> <tr> <td>8260B</td> <td>Chloromethane</td> <td>R86666</td> <td>0.66 µg/L</td> </tr> <tr> <td>8015D</td> <td>GRO</td> <td>G86666</td> <td>0.040 mg/L</td> </tr> </tbody> </table> <p>Detections of chloromethane and GRO in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of GRO in the associated samples that were greater than the reporting limits but less than or equal to 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.</p> | | Method | Analyte | Batch | Concentration | 245.1 | Total Mercury | 66396 | 0.00014 mg/L | 8260B | Chloromethane | R86666 | 0.66 µg/L | 8015D | GRO | G86666 | 0.040 mg/L |
| Method | Analyte | Batch | Concentration | | | | | | | | | | | | | | |

VALIDATION CRITERIA CHECKLIST

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>MS Sample Source</u> |
|---------------|-----------------------------|--------------|-------------------------|
| 200.7 | Total Metals | 66643 | Not Prepared |
| 200.7 | Dissolved Metals | A86607 | EB 3-18-22 |
| 200.7 | Dissolved Metals | A87332 | Not Prepared |
| 200.8 | Total Metals | 66341 | Not Prepared |
| 200.8 | Dissolved Metals | A86633 | Not Prepared |
| 200.8 | Dissolved Metals | B86624 | STP-1 to EP-2 |
| 245.1 | Dissolved and Total Mercury | 66396 | Not Prepared |
| 410.4 | COD | WG1836817 | Not Associated |
| 504.1 | EDB | 66262 | Not Prepared |
| 4500CN E | Cyanide | WG1836405 | Not Associated |
| 4500CN E | Cyanide | WG1836836 | Not Associated |
| 5210B | BOD | 66272 | Not Prepared |
| 8015D | TPH DRO and MRO | 66372 | Not Prepared |
| 8015D | TPH GRO | G86666 | West LDU |
| 8260B | VOCs | R86666 | East LDU |
| 8270C | SVOCs | 66282 | Not Prepared |
| 8270C | SVOCs | 66355 | Not Prepared |
| 8270C SIM | SVOCs | R86694 | Not Prepared |
| 8270C SIM | SVOCs | R86800 | Not Prepared |
| 9223B | E.Coli | 66276 | Not Prepared |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The MS/MSD percent recoveries and RPDs for project samples were within data validation and laboratory QC limits.

The percent recoveries and RPD values for MS/MSDs prepared from non-project samples were evaluated and considered, but data were not qualified based on those results since matrix similarity to project samples could not be guaranteed.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? Yes

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits.

VALIDATION CRITERIA CHECKLIST

17. Were surrogate recoveries within laboratory QC limits?

No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

| Method | Surrogate | Sample | Surrogate Recovery | QC Limits |
|--------|-----------------------|-------------|--------------------|------------|
| 8270C | 2-Fluorophenol | East LDU | 10.1% | 29.4-87.7% |
| 8270C | Phenol-d ₅ | East LDU | 25.0% | 28.5-64.7% |
| 8270C | 2,4,6-Tribromophenol | East LDU | 15.7% | 18.6-129% |
| 8015D | DNOP | DUP 3-18-22 | 159% | 42.2-138% |

The associated target analytes in the sample East LDU with surrogate recoveries that were less than lower laboratory QC limits were qualified as UJ if not detected and J- if detected due to evidence of potential low bias. The associated target analytes in the sample DUP 3-18-22 with a surrogate recovery that was greater than the upper laboratory QC limit were detections and were qualified as J+ due to evidence of potential high bias.

Since Method 8270 surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the samples West LDU and DUP 3-18-22, and qualification of sample data was not required.

The DRO and MRO results for sample East LDU were not qualified based on the surrogate non-conformance in the Method 8015D analysis since the applied dilution of 10 times resulted in a surrogate concentration below routinely calibrated levels, and that result was deemed unreliable and possibly inaccurate.

The SVOC results for sample STP-1 to EP-2 were not qualified based on the surrogate non-conformances in the Method 8070C analyses since the applied dilutions of 10 times resulted in surrogate concentrations below routinely calibrated levels, and those results were deemed unreliable and possibly inaccurate. Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit?

Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB 3-18-22, and one equipment blank sample, EB 3-18-22, were collected as part of this sample set.

VALIDATION CRITERIA CHECKLIST

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration</u> |
|------------------------|---------------|-----------------------|----------------------|
| Trip Blank | 8260B | Chloromethane | 0.67 µg/L |
| Trip Blank | 8015 | GRO | 0.035 mg/L |
| FB 3-18-22 | 8015 | GRO | 0.032 mg/L |
| EB 3-18-22 | 200.7 | Dissolved Zinc | 0.0068 mg/L |
| EB 3-18-22 | 8260B | Chloromethane | 0.67 µg/L |
| EB 3-18-22 | 8015D | GRO | 0.034 mg/L |
| EB 3-18-22 | 8015D | DRO | 0.023 mg/L |

The detection of dissolved zinc in the associated sample West LDU that was less than the applicable reporting limit was assigned a U qualifier. Detections of dissolved zinc in the associated samples that were greater than or equal to the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of dissolved zinc in the associated samples and detections of DRO that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

The chloromethane and GRO results were previously qualified due to laboratory blank contamination; therefore, additional qualification due to the trip, field, and equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples. Sample DUP 3-18-22 was collected as a field duplicate of sample West LDU.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exception.

The RPD value could not be calculated for 1,4-dioxane for the field duplicate pair West LDU and DUP 3-18-22 since the analyte was detected in the parent sample and was undetected in the duplicate sample. As the detection in the parent sample was greater than two times the reporting limit, 1,4-dioxane was qualified as J and UJ for the parent and duplicate samples, respectively.

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? N/A

Comments: Laboratory duplicates were prepared for these analyses and the laboratory duplicate sample sources are summarized in the following table.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>Laboratory Duplicate Sample Source</u> |
|---------------|-----------------|--------------|---|
| 410.4 | COD | WG1836817 | Not Associated |
| 4500CN E | Cyanide | WG1836405 | Not Associated |
| 4500CN E | Cyanide | WG1836836 | DUP 3-18-22, Not Associated |

Not Associated – The laboratory duplicate sample source was not associated with this project.

The RPD for the laboratory duplicate prepared from a project sample was not applicable since the results for one or both measurements were within 5 times the reporting limit.

The RPD values for the laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

VALIDATION CRITERIA CHECKLIST

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? N/A

Comments: Target analytes were not reported by more than one method in this data set.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results. The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result
(mg/L)</u> | <u>Dissolved Result
(mg/L)</u> |
|------------------|----------------|--------------------------------|------------------------------------|
| East LDU | Mercury | ND | 0.00010 |

| Trichloroethene | SW8260B | 0.58 µg/L | ND (1.0 µg/L) | DL |
| Xylenes, Total | SW8260B | 0.52 µg/L | 0.51 µg/L | 1.9% +/-RL |
| 1,4-Dioxane | SW8270C | 8.0 µg/L | ND (10 µg/L) | DL |
| Naphthalene | SW8270C | 0.16 µg/L | ND (1.0 µg/L) | DL |
| Pyrene | SW8270C | 0.16 µg/L | ND (2.0 µg/L) | DL |
| Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020. | | | | |

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

The RPD value could not be calculated for 1,4-dioxane for the field duplicate pair West LDU and DUP 3-18-22 since the analyte was detected in the parent sample and was undetected in the duplicate sample. As the detection in the parent sample was greater than two times the reporting limit, 1,4-dioxane was qualified as J and UJ for the parent and duplicate samples, respectively.

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| EBD | Equipment blank detection |
| ERPD-FD | High field duplicate RPD. |
| HT-AN | Sample was analyzed outside of the method holding time. |
| LR-SUR | The surrogate percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| HR-SUR | The surrogate percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| MBD | Method blank detection |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |

| Analyte | Method | Field Sample ID | Lab Sample ID | Result | Limit | Units | Reviewer Qualifier | DV Flag Reasons |
|------------------------|---------|-----------------|---------------|---------|--------|-------|--------------------|-----------------|

| Reviewer: Mike Phillips, Senior Chemist | |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB 3-22-22 | 2203B95-001 |
| OW-70 | 2203B95-002 |
| OW-12A | 2203B95-003 |
| KA-3 | 2203B95-004 |
| NAPIS-3 | 2203B95-005 |
| NAPIS-2 | 2203B95-006 |
| OAPIS-1 | 2203B95-007 |
| DUP-3-22-22 | 2203B95-008 |
| FB-3-22-22 | 2203B95-009 |
| Trip Blank | 2203B95-010 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ⊗ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates and Internal Standards) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| J- | The result is an estimated concentration, but may be biased low |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 630 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformance related to this data set.

Method 8270C SIM: The chrysene-d₁₂ internal standard area count for only the equipment blank was slightly out of range. Insufficient sample extract remained for reanalysis. This sample is non-detect for all PAH compounds.

Method 8270C: "S" flagged surrogates denote low surrogate recoveries due to matrix interferences/sample dilution.

1-methylphthalene was reported by EPA Method 8270 instead of EPA Method 8270 SIM because of its elevated concentration for sample NAPIS-2.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

E – Estimated value. *This laboratory flag was applied only to QC sample and surrogate results in the laboratory report, and qualification of sample data was not required.*

J – Analyte detected below quantitation limits

J3 – The associated batch QC was outside the established quality control range for precision.

J6 – The sample matrix interfered with the ability to make any accurate determination; spike value is low.

R – RPD outside of range.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by courier, and custody was maintained at all times.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| <u>Method</u> | <u>Sample(s)</u> | <u>Analyte(s)</u> | <u>Dilution Factor</u> |
|---------------|--------------------------|----------------------------|------------------------|
| 200.7 | OW-12A, NAPIS-3, NAPIS-2 | Total and Dissolved Barium | 5 |
| 200.8 | OAPIS-1 | Dissolved Metals | 5 |
| 200.8 | OW-12A, KA-3, OAPIS-1 | Total Metals | 5 |
| 8015D | OAPIS-1 | GRO, DRO MRO | 5 |
| 8260B | OAPIS-1 | VOCs | 5 |
| 200.7 | NAPIS-2 | Total Barium | 10 |
| 8015D | NAPIS-2 | GRO | 10 |
| 8260B | OW-12A | Select VOCs | 10 |
| 8260B | NAPIS-2 | VOCs | 10 |

| VALIDATION CRITERIA CHECKLIST | |
|---|-----|
| 5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? | No |
| <p>Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.</p> <p>The CoC requested total and dissolved metals using Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> <p>The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> | |
| 6. Were samples received in good condition within method-specified requirements? | No |
| <p>Comments: Samples were received on ice, in good condition, and with the cooler temperatures outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ between 0.1°C and 0.9°C as noted on the CoC and the <i>Sample Log-in Check List</i>. Samples transferred to Pace National were received in good condition with the cooler temperature outside the recommended range at 1.9°C as noted on the CoC. The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen.</p> | |
| 7. Were samples extracted/digested and analyzed within method-specified or technical holding times? | Yes |
| Comments: The samples were extracted/digested and analyzed within method-specific holding times. | |
| 8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. | Yes |
| Comments: The results were reported in concentration units of micrograms per liter ($\mu\text{g/L}$) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested. | |
| 9. Did the laboratory provide any specific initial and/or continuing calibration results? | No |
| Comments: Initial and continuing calibration data were not included as part of this data set. | |
| 10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? | N/A |
| Comments: Initial and continuing calibration data were not included as part of this data set. | |
| 11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | Yes |
| Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples. | |

VALIDATION CRITERIA CHECKLIST

12. Were target analytes reported as not detected in the laboratory blanks? No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

| Method | Analyte | Batch | Concentration |
|--------|---------------|--------|---------------|
| 245.1 | Total Mercury | 66396 | 0.00014 mg/L |
| 8015D | DRO | 66385 | 0.044 mg/L |
| 8260B | Chloromethane | R86734 | 0.66 µg/L |
| 8015D | GRO | G86734 | 0.041 mg/L |

Detections of chloromethane and GRO in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of GRO in the associated samples that were greater than the reporting limits but less than or equal to 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batch. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| Method | Analytes | Batch | MS Sample Source |
|-----------|-------------------|-----------|------------------------|
| 200.7 | Total Metals | 66643 | Not Prepared |
| 200.7 | Total Metals | 66644 | Not Prepared |
| 200.7 | Dissolved Metals | B86739 | Not Prepared |
| 200.8 | Total Metals | 66440 | EB 3-22-22 |
| 200.8 | Dissolved Metals | B86714 | EB 3-22-22, OW-70 |
| 245.1 | Total Mercury | 66396 | DUP-3-22-22 |
| 245.1 | Dissolved Mercury | 66455 | Not Prepared |
| 504.1 | EDB | 66393 | Not Prepared |
| 4500CN E | Cyanide | WG1838531 | Not Associated, OW-12A |
| 4500CN E | Cyanide | WG1839312 | Not Associated |
| 8015D | TPH DRO and MRO | 66372 | Not Prepared |
| 8015D | TPH DRO and MRO | 66385 | Not Prepared |
| 8015D | TPH GRO | G86734 | OW-12A |
| 8260B | VOCs | R86734 | OW-70 |
| 8260B | VOCs | R86760 | Not Prepared |
| 8270C | SVOCs | 66355 | Not Prepared |
| 8270C SIM | SVOCs | R86800 | Not Prepared |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

VALIDATION CRITERIA CHECKLIST

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? No

Comments: The MS/MSD percent recoveries and RPDs for project samples were within data validation and laboratory QC limits, with the following exception.

The MSD recovery for GRO in Method 8015D batch G86734 was outside the QC limits of 70-130% at 64.3%. GRO was detected in the associated samples, and these results were qualified as J- due to possible low bias.

The percent recoveries and RPD values for MS/MSDs prepared from non-project samples were evaluated and considered, but data were not qualified based on those results since matrix similarity to project samples could not be guaranteed.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | <u>LCS Recovery</u> | <u>LCSD Recovery</u> | <u>LCS/LCSD QC Limits</u> | <u>LCS/LCSD RPD</u> | <u>RPD QC Limits</u> |
|--------------|---------------------|--------------|---------------------|----------------------|---------------------------|---------------------|----------------------|
| 200.7 | Dissolved Cadmium | B86739 | 132% | ----- | 70-130% | ----- | ----- |
| 200.7 | Total Nickel | 66643 | 69.0% | ----- | 70-130% | ----- | ----- |
| 200.7 | Total Nickel | 66644 | 67.0% | ----- | 70-130% | ----- | ----- |
| 8015D | DRO | 66385 | 107% | Acceptable | 31.7%-75.4% | 56.8% | 20% |

The associated sample results were non-detections for dissolved cadmium and did not require qualification due to potential high bias.

The DRO results were detections in the associated samples, and these results were qualified as J+ due to potential high bias. These associated DRO results were also qualified as J due to evidence of poor precision.

Associated samples with detections for total nickel were qualified with J- flags to indicate estimated concentrations, and the associated sample EB 3-22-22 with a non-detection for total nickel was qualified with a UJ flag due to possible low bias.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

Since Method 8270 surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the sample OW-12A, and qualification of sample data was not required.

The 8270C SIM internal standard chrysene-d₁₂ was outside the acceptance range in sample EB 3-22-22. The associated analytes (benzo(a)anthracene, chrysene, and pyrene) were not detected in sample EB 3-22-22, and the results were assigned UJ qualifiers.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

VALIDATION CRITERIA CHECKLIST

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB-3-22-22, and one equipment blank sample, EB 3-22-22, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration</u> |
|------------------------|---------------|---------------------------|----------------------|
| Trip Blank | 8260B | Chloromethane | 0.70 µg/L |
| FB-3-22-22 | 8260B | 1,2-Dichloroethane | 0.42 µg/L |
| FB-3-22-22 | 8260B | 2-Butanone | 4.6 µg/L |
| FB-3-22-22 | 8260B | Chloromethane | 0.76 µg/L |
| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration</u> |
| EB 3-22-22 | 200.7 | Dissolved Zinc | 0.0065 mg/L |
| EB 3-22-22 | 200.8 | Total Lead | 0.00027 mg/L |
| EB 3-22-22 | 8015D | DRO | 0.026 mg/L |
| EB 3-22-22 | 8015D | GRO | 0.034 mg/L |
| EB 3-22-22 | 8260B | 2-Butanone | 6.1 µg/L |
| EB 3-22-22 | 8260B | Chloromethane | 0.88 µg/L |

Detections of 1,2-dichloroethane, 2-butanone, and dissolved zinc in the associated samples that were less than the applicable reporting limits were assigned U qualifiers. Detections of dissolved zinc and total lead in the associated samples that were greater than the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

The chloromethane and GRO results were previously qualified due to laboratory blank contamination in batches R86734 and G86734; therefore, additional qualification due to the trip, field, and equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples. Sample DUP-3-22-22 was collected as a field duplicate of sample OW-70.

VALIDATION CRITERIA CHECKLIST

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exceptions.

RPD values could not be calculated for acenaphthene and anthracene for the field duplicate pair OW-70 and DUP-3-22-22 since the analytes were detected in the duplicate sample and were undetected in the parent sample. As the detections in the duplicate sample were greater than two times the reporting limits, acenaphthene and anthracene were qualified as J and UJ for the duplicate and parent samples, respectively.

The RPD value for naphthalene exceeded the data validation limit of 30% at 36.4%, which was evidence of poor precision. The naphthalene results were qualified as J for samples OW-70 and DUP-3-22-22.

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? Yes

Comments: Laboratory duplicates were prepared for these analyses, and the laboratory duplicate sample sources are summarized in the following table.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>Laboratory Duplicate Sample Source</u> |
|---------------|-----------------|--------------|---|
| 4500CN E | Cyanide | WG1838531 | Not Associated, EB 3-22-22 |
| 4500CN E | Cyanide | WG1839312 | Not Associated, DUP-3-22-22 |

Not Associated – The laboratory duplicate sample source was not associated with this project.

The RPDs for the laboratory duplicates prepared from project samples were not applicable since the results for one or both measurements were within 5 times the reporting limit.

The RPD values for the laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

VALIDATION CRITERIA CHECKLIST

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? N/A

Comments: Target analytes were not reported by more than one method in this data set.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results. The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result

| Acenaphthene | SW8270C | ND (0.10 µg/L) | 0.22 µg/L | DL |
| Anthracene | SW8270C | ND (0.10 µg/L) | 0.26 µg/L | DL |
| Naphthalene | SW8270C | 0.18 µg/L | 0.26 µg/L | 36.4% |
| Phenanthrene | SW8270C | 0.80 µg/L | 1.0 µg/L | 22.2% |
| Pyrene | SW8270C | ND (0.20 µg/L) | 0.26 µg/L | DL |
| Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020. | | | | |

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

RPD values could not be calculated for acenaphthene and anthracene for the field duplicate pair OW-70 and DUP-3-22-22 since the analytes were detected in the duplicate sample and were undetected in the parent sample. As the detections in the duplicate sample were greater than two times the reporting limits, acenaphthene and anthracene were qualified as J and UJ for the duplicate and parent samples, respectively.

The RPD value for naphthalene exceeded the data validation limit of 30% at 36.4%, which was evidence of poor precision. The naphthalene results were qualified as J for samples OW-70 and DUP-3-22-22.

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|--|
| EBD | Equipment blank detection |
| ERPD-FD | High field duplicate RPD. |
| ERPD-LCS | The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision. |
| FBD | Field blank detection |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LIS | The internal standard area count is less than 50% of the area of the 12-hour standard. |
| LR-LCS | The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| LR-MS | The MS and/or MSD percent recovery was less than the lower acceptable limit indicating possible matrix interference. |
| MBD | Method blank detection |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |

| Analyte | Method | Field Sample ID | Lab Sample ID | Result | Limit | Units | Reviewer Qualifier | DV Flag Reasons |
|------------------------|---------|-----------------|---------------|--------|-------|-------|--------------------|-----------------|

| Data Validator: Daran O'Hollearn, Lead Project Scientist | |
| Reviewer: Mike Phillips, Senior Chemist | |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

Tier II Data Validation Report Summary

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-3-23-22 | 2203C69-001 |
| OW-54 | 2203C69-002 |
| OW-66 | 2203C69-003 |
| OW-55 | 2203C69-004 |
| OW-13 | 2203C69-005 |
| OW-56 | 2203C69-006 |
| OW-59 | 2203C69-007 |
| OW-60 | 2203C69-008 |
| MKTF-16 | 2203C69-009 |
| DUP-3-23-22 | 2203C69-010 |
| FB-3-23-22 | 2203C69-011 |
| Trip Blank | 2203C69-012 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ⊗ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates and Internal Standards) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ✓ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| J- | The result is an estimated concentration, but may be biased low |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |
| R | Rejected, data not usable |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 779 data points. The data completeness calculation does not include any submitted blank sample results. One data point was rejected. The data completeness measure for this data package is calculated to be 99.87% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformance related to this data set.

Naphthalene was reported by EPA Method 8270 instead of EPA Method 8270 SIM because of its elevated concentration for sample OW-55.

Naphthalene, 1-methylnaphthalene, and 2-methylnaphthalene were reported by EPA Method 8270 instead of EPA Method 8270 SIM because of their elevated concentrations for the following sample: OW-66.

"S" flagged surrogates denote low surrogate recoveries due to matrix interferences/sample dilution.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

B – Analyte detected in the associated method blank.

E – Estimated value. *This laboratory flag was applied only to QC sample and surrogate results in the laboratory report, and qualification of sample data was not required.*

J – Analyte detected below quantitation limits

J3 – The associated batch QC was outside the established quality control range for precision.

J6 – The sample matrix interfered with the ability to make any accurate determination; spike value is low.

R – RPD outside of range.

S – % Recovery outside of range due to dilution or matrix interference.

D – Sample diluted due to matrix.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by courier, and custody was maintained at all times.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| Method | Sample(s) | Analyte(s) | Dilution Factor |
|--------|---------------------|-----------------------------------|-----------------|
| 200.7 | OW-66 | Total and Dissolved Barium | 5 |
| 200.7 | OW-60 | Total Barium | 5 |
| 200.8 | Multiple Samples | Select Total and Dissolved Metals | 5 |
| 8015D | OW-54 | GRO | 5 |
| 8260B | OW-54 | Select VOCs | 5 |

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? No

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.

The CoC requested total and dissolved metals using Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

6. Were samples received in good condition within method-specified requirements? No

Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ between 0.3°C and 2.3°C as noted on the CoC and the *Sample Log-in Check List*. Samples transferred to Pace National were received in good condition with the cooler temperature within the recommended range at 2.7°C as noted on the CoC. The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen.

7. Were samples extracted/digested and analyzed within method-specified or technical holding times? Yes

Comments: The samples were extracted/digested and analyzed within method-specific holding times.

8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. Yes

Comments: The results were reported in concentration units of micrograms per liter ($\mu\text{g/L}$) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.

9. Did the laboratory provide any specific initial and/or continuing calibration results? No

Comments: Initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

VALIDATION CRITERIA CHECKLIST

12. Were target analytes reported as not detected in the laboratory blanks? No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

| Method | Analyte | Batch | Concentration |
|--------------|----------------------|---------------|-------------------|
| 8015D | DRO | 66385 | 0.044 mg/L |
| 8015D | DRO | 66409 | 0.040 mg/L |
| 8015D | MRO | 66409 | 0.099 mg/L |
| 8260B | Chloromethane | R86734 | 0.66 µg/L |
| 8260B | Carbon disulfide | R86760 | 0.87 µg/L |
| 8260B | Chloromethane | R86760 | 0.69 µg/L |
| 8260B | Trichloroethene | R86760 | 0.34 µg/L |
| 8260B | Vinyl Chloride | R86760 | 0.47 µg/L |
| 8270 SIM | Pyrene | R87058 | 0.16 µg/L |
| 8015D | GRO | G86734 | 0.041 mg/L |

Detections of DRO, chloromethane, and GRO in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of DRO, MRO, and GRO in the associated samples that were greater than the reporting limits but less than or equal to 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| Method | Analytes | Batch | MS Sample Source |
|-----------|-------------------|-----------|-------------------|
| 200.7 | Total Metals | 66644 | OW-54, OW-66 |
| 200.7 | Dissolved Metals | B86825 | Not Prepared |
| 200.8 | Total Metals | 66472 | EB-3-23-22 |
| 200.8 | Dissolved Metals | B86714 | Not Prepared |
| 245.1 | Total Mercury | 66425 | EB-3-23-22 |
| 245.1 | Dissolved Mercury | 66456 | Not Prepared |
| 504.1 | EDB | 66393 | Not Prepared |
| 504.1 | EDB | 66394 | Not Prepared |
| 4500CN E | Cyanide | WG1839312 | EB-3-23-22, OW-56 |
| 8015D | TPH DRO and MRO | 66385 | Not Prepared |
| 8015D | TPH DRO and MRO | 66409 | Not Prepared |
| 8015D | TPH GRO | G86734 | Not Prepared |
| 8260B | VOCs | R86734 | Not Prepared |
| 8260B | VOCs | R86760 | Not Prepared |
| 8270C | SVOCs | 66392 | Not Prepared |
| 8270C SIM | SVOCs | R86913 | Not Prepared |
| 8270C SIM | SVOCs | R87058 | Not Prepared |

Not Prepared – Matrix spikes were not prepared/reported for this batch.

VALIDATION CRITERIA CHECKLIST

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? No

Comments: The MS/MSD percent recoveries and RPDs for project samples were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | MS Recovery | MSD Recovery | MS/MSD QC Limits | MS/MSD RPD | RPD QC Limits |
|-----------|---------|-----------|-------------|--------------|------------------|------------|---------------|
| 4500 CN E | Cyanide | WG1839312 | Acceptable | 28.4% | 75-125% | 110% | 20% |
| 4500 CN E | Cyanide | WG1839312 | Acceptable | 73.1% | 75-125% | 29.5% | 20% |

Two MS/MSD pairs were analyzed for cyanide in batch WG1839312. The MSD recoveries were below the NFG QC limits for both of the MS/MSD pairs, but the MSD recovery for one of the pairs was less than 30%. The results for all of the associated samples in the batch would typically be qualified based on the MS/MSD results. However, since multiple MS/MSD pairs were analyzed for this batch, the determination of batch sample associations would be arbitrary. Therefore, only the parent sample EB-3-23-22 used for the MS/MSD pair that recovered at 28.4% was qualified as R to indicate rejected (not usable) data based on evidence of extreme low bias. The remaining samples were qualified as J- if detected and UJ if not detected.

In addition, both MS/MSD pairs exhibited MS/MSD RPDs that exceeded the laboratory QC limit indicating poor precision.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits | LCS / LCSD RPD | RPD QC Limits |
|-----------|------------------------|--------|--------------|---------------|--------------------|----------------|---------------|
| 200.7 | Total Nickel | 66644 | 67.0% | ----- | 70-130% | ----- | ----- |
| 8015D | DRO | 66385 | 107% | Acceptable | 31.7-75.4% | 56.8% | 20% |
| 8270C SIM | Phenanthrene | R87058 | Acceptable | Acceptable | 38.2-93.9% | 30.4% | 27.9% |
| 8270C SIM | Pyrene | R87058 | Acceptable | Acceptable | 51-113% | 29.5% | 20% |
| 8270C SIM | Benzo(a)anthracene | R87058 | Acceptable | Acceptable | 51-147% | 26.2% | 24.1% |
| 8270C SIM | Chrysene | R87058 | Acceptable | Acceptable | 55.3-115% | 33.0% | 20% |
| 8270C SIM | Benzo(b)fluoranthene | R87058 | Acceptable | Acceptable | 44.4-136% | 34.5% | 24.5% |
| 8270C SIM | Indeno(1,2,3-cd)pyrene | R87058 | Acceptable | Acceptable | 31.4-165% | 35.2% | 21.1% |

Total nickel results were assigned J- qualifiers in associated samples due to evidence of potential low bias, except the non-detect results for associated samples EB-3-23-22 and OW-13 which were assigned UJ qualifiers.

DRO was in the associated samples, and these results were qualified as J+ due to potential high bias. These associated DRO results were also qualified due to evidence of poor precision.

The Method 8270C SIM analytes with LCS/LCSD RPD values that were above the QC limits were not detected in the associated samples. These results were qualified as UJ due to evidence of poor precision.

VALIDATION CRITERIA CHECKLIST

17. Were surrogate recoveries within laboratory QC limits?

No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

| <u>Method</u> | <u>Surrogate</u> | <u>Sample</u> | <u>Surrogate Recovery</u> | <u>QC Limits</u> |
|---------------|----------------------|---------------|---------------------------|------------------|
| 8015D MOD | DNOP | OW-56 | 147% | 42.2-138% |
| 8270C | 2-Fluorophenol | OW-59 | 19.4% | 29.4-87.7% |
| 8270C | 2,4,6-Tribromophenol | OW-59 | 6.62% | 18.6-129% |

The target analytes DRO and MRO associated with the Method 8015 surrogate DNOP were detected in sample OW-56, and these results were assigned J+ qualifiers due to possible high bias.

The acid fraction target analytes associated with the identified non-compliant Method 8270C surrogate recoveries were not detected in sample OW-59. Normally, if a surrogate recovered below 10%, the associated analytes would be qualified as R, but one of the acid surrogates was acceptable and the recovery for the other acid surrogate was low but not below 10%. The associated acid fraction analytes were not detected in sample OW-59 and the results were assigned UJ qualifiers due to the evidence of low bias.

The SVOC results and the DRO and MRO results for sample OW-66 were not qualified based on the surrogate non-conformances in the Method 8270C and Method 8015D Modified analyses since the applied dilutions of 10 times resulted in surrogate concentrations below routinely calibrated levels, and those results were deemed unreliable and possibly inaccurate.

Since Method 8270C SIM surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the samples OW-66 and OW-55, and qualification of sample data was not required.

Since Method 8270C surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the sample OW-13, and qualification of sample data was not required.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit?

Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB-3-23-22, and one equipment blank sample, EB-3-23-22, were collected as part of this sample set.

VALIDATION CRITERIA CHECKLIST

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration</u> |
|------------------------|---------------|-------------------------|----------------------|
| Trip Blank | 8260B | Chloromethane | 0.69 µg/L |
| FB-3-23-22 | 8260B | 2-Butanone | 5.2 µg/L |
| FB-3-23-22 | 8260B | Chloromethane | 0.80 µg/L |
| EB-3-23-22 | 200.7 | Dissolved Nickel | 0.0035 mg/L |
| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration</u> |
| EB-3-23-22 | 200.7 | Dissolved Zinc | 0.0063 mg/L |
| EB-3-23-22 | 8015D | DRO | 0.033 mg/L |
| EB-3-23-22 | 8015D | GRO | 0.034 mg/L |
| EB-3-23-22 | 8260B | 2-Butanone | 5.0 µg/L |
| EB-3-23-22 | 8260B | Chloromethane | 0.70 µg/L |

Detections of 2-butanone, dissolved nickel, and dissolved zinc in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of dissolved nickel and dissolved zinc in the associated samples that were greater than the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

The DRO, chloromethane, and GRO results were previously qualified due to laboratory blank contamination in batches 66385, R86734, R86760, and G86734; therefore, additional qualification due to the trip, field, and equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples. Sample DUP-3-23-22 was collected as a field duplicate of sample OW-54.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? Yes

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples.

VALIDATION CRITERIA CHECKLIST

22. For laboratory duplicates prepared from project samples, were RPDs within data validation or laboratory QC limits? N/A

Comments: Laboratory duplicates were prepared for these analyses, and the laboratory duplicate sample sources are summarized in the following table.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>Laboratory Duplicate Sample Source</u> |
|---------------|-----------------|--------------|---|
| 4500CN E | Cyanide | WG1839312 | Not Associated |
| 4500CN E | Cyanide | WG1839312 | OW-13 |

Not Associated – The laboratory duplicate sample source was not associated with this project.

The RPD for the laboratory duplicate prepared from a project sample was not applicable since the results for one or both measurements were within 5 times the reporting limit.

The RPD value for the laboratory duplicate sample prepared from a non-project sample was evaluated and considered, but data were not qualified based on this result since matrix similarity to project samples could not be guaranteed.

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? N/A

Comments: Target analytes were not reported by more than one method in this data set.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results. The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
|------------------|----------------|----------------------------|--------------------------------|
| OW-54 | Antimony | ND | 0.00047 |
| DUP-3-23-22 | Antimony | ND | 0.00051 |
| OW-13 | Barium | 0.020 | 0.025 |
| OW-54 | Cobalt | 0.078 | 0.086 |
| OW-56 | Cobalt | 0.0069 | 0.0074 |
| OW-59 | Cobalt | 0.0043 | 0.0050 |
| DUP-3-23-22 | Cobalt | 0.081 | 0.085 |
| EB-3-23-22 | Nickel | ND | 0.0035 |

| Xylenes, Total | SW8260B | 2.0 µg/L | 2.4 µg/L | 18.2% +/-RL |
| Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020. | | | | |
| DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and | | | | |

therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|--|
| EBD | Equipment blank detection |
| ERPD-LCS | The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision. |
| ERPD-MS | The MS/MSD RPD exceeded the upper acceptable limit indicating poor precision. |
| FBD | Field blank detection |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-LCS | The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| LR-MS | The MS and/or MSD percent recovery was less than the lower acceptable limit indicating possible matrix interference. |
| LR-SUR | The surrogate percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| HR-SUR | The surrogate percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| MBD | Method blank detection |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |

| Analyte | Method | Field Sample ID | Lab Sample ID | Result | Limit | Units | Reviewer Qualifier | DV Flag Reasons |
|------------------------|---------|-----------------|---------------|--------|-------|-------|--------------------|-----------------|

| Reviewer: Mike Phillips, Senior Chemist | |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks

Tier II Data Validation Report Summary

- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-3-24-22 | 2203D54-001 |
| OW-30 | 2203D54-002 |
| OW-64 | 2203D54-003 |
| OW-14 | 2203D54-004 |
| STP-1-NW | 2203D54-005 |
| MKTF-44 | 2203D54-006 |
| DUP-3-24-22 | 2203D54-007 |
| FB-3-24-22 | 2203D54-008 |
| Trip Blank | 2203D54-009 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ⊗ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates and Internal Standards) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ✓ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| J- | The result is an estimated concentration, but may be biased low |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 540 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformance related to this data set.

"S" flagged denote that the surrogate recoveries are outside of the standard limits due to matrix interferences/sample dilution.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No

If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

B – Analyte detected in the associated method blank.

D – Sample diluted due to matrix.

E – Estimated value. *This laboratory flag was applied only to QC sample and surrogate results in the laboratory report, and qualification of sample data was not required.*

J – Analyte detected below quantitation limits.

J3 – The associated batch QC was outside the established quality control range for precision.

J6 – The sample matrix interfered with the ability to make any accurate determination; spike value is low.

R – RPD outside of range.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by courier, and custody was maintained at all times.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| Method | Sample(s) | Analyte(s) | Dilution Factor |
|--------|---------------------------|-----------------------------------|-----------------|
| 200.7 | OW-14 | Total and Dissolved Barium | 5 |
| 200.8 | STP-1-NW, MKTF-44 | Select Total and Dissolved Metals | 5 |
| 504.1 | Multiple Samples | EDB | 5 |
| 8015D | OW-14 | DRO and MRO | 10 |
| 8015D | OW-14 | GRO | 20 |
| 8260B | OW-14 | Ethylbenzene | 50 |
| 8260B | OW-30, OW-14, DUP-3-24-22 | MTBE | 50 |
| 8260B | OW-14 | Benzene | 1,000 |

VALIDATION CRITERIA CHECKLIST

| 5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? | No | | | | | | | | | | | | | | | | | | | | |
|--|------------|--------|----------------------|-------|---------------|-------|-----|-------|------------|-------|-----|-------|------------|-------|------------|--------|----------------------|----------|--------|--------|----------------------|
| <p>Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.</p> <p>The CoC requested total and dissolved metals using Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> <p>The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> | | | | | | | | | | | | | | | | | | | | | |
| 6. Were samples received in good condition within method-specified requirements? | Yes | | | | | | | | | | | | | | | | | | | | |
| <p>Comments: Samples were received on ice, in good condition, and with the cooler temperatures within the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ at 2.9°C, 3.5°C, and 4.0°C as noted on the CoC and the <i>Sample Log-in Check List</i>. Samples transferred to Pace National were received in good condition with the cooler temperature within the recommended range at 3.7°C as noted on the CoC.</p> | | | | | | | | | | | | | | | | | | | | | |
| 7. Were samples extracted/digested and analyzed within method-specified or technical holding times? | Yes | | | | | | | | | | | | | | | | | | | | |
| <p>Comments: The samples were extracted/digested and analyzed within method-specific holding times.</p> | | | | | | | | | | | | | | | | | | | | | |
| 8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. | Yes | | | | | | | | | | | | | | | | | | | | |
| <p>Comments: The results were reported in concentration units of micrograms per liter ($\mu\text{g/L}$) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.</p> | | | | | | | | | | | | | | | | | | | | | |
| 9. Did the laboratory provide any specific initial and/or continuing calibration results? | No | | | | | | | | | | | | | | | | | | | | |
| <p>Comments: Initial and continuing calibration data were not included as part of this data set.</p> | | | | | | | | | | | | | | | | | | | | | |
| 10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? | N/A | | | | | | | | | | | | | | | | | | | | |
| <p>Comments: Initial and continuing calibration data were not included as part of this data set.</p> | | | | | | | | | | | | | | | | | | | | | |
| 11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | Yes | | | | | | | | | | | | | | | | | | | | |
| <p>Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.</p> | | | | | | | | | | | | | | | | | | | | | |
| 12. Were target analytes reported as not detected in the laboratory blanks? | No | | | | | | | | | | | | | | | | | | | | |
| <p>Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.</p> <table border="1" data-bbox="420 1419 1198 1619"> <thead> <tr> <th>Method</th> <th>Analyte</th> <th>Batch</th> <th>Concentration</th> </tr> </thead> <tbody> <tr> <td>8015D</td> <td>DRO</td> <td>66409</td> <td>0.040 mg/L</td> </tr> <tr> <td>8015D</td> <td>MRO</td> <td>66409</td> <td>0.099 mg/L</td> </tr> <tr> <td>8260B</td> <td>Chloroform</td> <td>A86942</td> <td>0.21 $\mu\text{g/L}$</td> </tr> <tr> <td>8270 SIM</td> <td>Pyrene</td> <td>R87058</td> <td>0.16 $\mu\text{g/L}$</td> </tr> </tbody> </table> <p>Detections of the identified analytes in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of the identified analytes in the associated samples that were greater than the reporting limits but less than or equal to 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.</p> | | Method | Analyte | Batch | Concentration | 8015D | DRO | 66409 | 0.040 mg/L | 8015D | MRO | 66409 | 0.099 mg/L | 8260B | Chloroform | A86942 | 0.21 $\mu\text{g/L}$ | 8270 SIM | Pyrene | R87058 | 0.16 $\mu\text{g/L}$ |
| Method | Analyte | Batch | Concentration | | | | | | | | | | | | | | | | | | |
| 8015D | DRO | 66409 | 0.040 mg/L | | | | | | | | | | | | | | | | | | |
| 8015D | MRO | 66409 | 0.099 mg/L | | | | | | | | | | | | | | | | | | |
| 8260B | Chloroform | A86942 | 0.21 $\mu\text{g/L}$ | | | | | | | | | | | | | | | | | | |
| 8270 SIM | Pyrene | R87058 | 0.16 $\mu\text{g/L}$ | | | | | | | | | | | | | | | | | | |

VALIDATION CRITERIA CHECKLIST

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batch. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| Method | Analytes | Batch | MS Sample Source |
|-----------|-------------------|-----------|-----------------------|
| 200.7 | Total Metals | 66644 | Not Prepared |
| 200.7 | Dissolved Metals | A87332 | DUP-3-24-22 |
| 200.7 | Dissolved Metals | C86825 | OW-30, EB-3-24-22 |
| 200.8 | Total Metals | 66472 | Not Prepared |
| 200.8 | Total Metals | 66473 | MKTF-44 |
| 200.8 | Dissolved Metals | B86786 | Not Prepared |
| 245.1 | Total Mercury | 66425 | Not Prepared |
| 245.1 | Dissolved Mercury | 66456 | Not Prepared |
| 504.1 | EDB | 66394 | Trip Blank |
| 4500CN E | Cyanide | WG1841516 | OW-30, Not Associated |
| 8015D | TPH DRO and MRO | 66409 | Not Prepared |
| 8015D | TPH GRO | A86911 | EB-3-24-22 |
| 8015D | TPH GRO | B86939 | Not Prepared |
| 8260B | VOCs | A86942 | Not Prepared |
| 8260B | VOCs | A86972 | Not Prepared |
| 8260B | VOCs | A87014 | Not Prepared |
| 8270C | SVOCs | 66423 | Not Prepared |
| 8270C SIM | SVOCs | R87058 | Not Prepared |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? No

Comments: The MS/MSD percent recoveries and RPDs for project samples were within data validation and laboratory QC limits, with the following exceptions.

The MS and MSD recoveries for total antimony in Method 200.8 batch 66473 were outside the QC limits of 75-125% at 58.8% and 54.9%, respectively. Total antimony was not detected in the associated samples, and these results were qualified as UJ due to evidence of potential low bias.

The MS recovery for cyanide in Method 4500 CN E batch WG1841516 was outside the laboratory QC limits of 90-110% at 89.9%. However, the recovery was within data validation limits of 75-125%. Validation action was not required.

The percent recoveries and RPD values for MS/MSDs prepared from non-project samples were evaluated and considered but data were not qualified based on those results since matrix similarity to project samples could not be guaranteed.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples

VALIDATION CRITERIA CHECKLIST

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits | LCS/LCSD RPD | RPD QC Limits |
|-----------|------------------------|--------|--------------|---------------|--------------------|--------------|---------------|
| 200.7 | Total Nickel | 66644 | 67.0% | ----- | 70-130% | ----- | ----- |
| 8270C SIM | Phenanthrene | R87058 | Acceptable | Acceptable | 38.2-93.9% | 30.4% | 27.9% |
| 8270C SIM | Pyrene | R87058 | Acceptable | Acceptable | 51-113% | 29.5% | 20% |
| 8270C SIM | Benzo(a)anthracene | R87058 | Acceptable | Acceptable | 51-147% | 26.2% | 24.1% |
| 8270C SIM | Chrysene | R87058 | Acceptable | Acceptable | 55.3-115% | 33.0% | 20% |
| 8270C SIM | Benzo(b)fluoranthene | R87058 | Acceptable | Acceptable | 44.4-136% | 34.5% | 24.5% |
| 8270C SIM | Indeno(1,2,3-cd)pyrene | R87058 | Acceptable | Acceptable | 31.4-165% | 35.2% | 21.1% |

Associated samples with detections for total nickel were qualified with J- flags due to possible low bias., and the associated samples with non-detections for total nickel were qualified with a UJ flag due to possible low bias.

The analytes with LCS/LCSD RPD values that were above the QC limit that were not detected in the associated samples were qualified as UJ due to evidence of poor precision. The detected phenanthrene and pyrene results were qualified as J due to evidence of poor precision.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

The Method 8015D surrogate BFB was recovered in sample OW-64 above the acceptance limits of 70-130% at 317%. The target analyte, GRO, associated with this surrogate that was detected in sample OW-64 was assigned a J+ qualifier due to evidence of potential high bias.

The DRO and MRO results for sample OW-14 were not qualified based on the surrogate non-conformance in the Method 8015D analysis since the applied dilution of 10 times resulted in a surrogate concentration below routinely calibrated levels, and this result was deemed unreliable and possibly inaccurate.

Since Method 8270C surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the sample OW-14, and qualification of sample data was not required.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB-3-24-22, and one equipment blank sample, EB-3-24-22, were collected as part of this sample set.

VALIDATION CRITERIA CHECKLIST

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration</u> |
|------------------------|---------------|-----------------------|----------------------|
| Trip Blank | 8260B | Benzene | 0.57 µg/L |
| Trip Blank | 8260B | Chloroform | 0.20 µg/L |
| FB-3-24-22 | 8260B | 2-Butanone | 6.2 µg/L |
| FB-3-24-22 | 8260B | Benzene | 0.75 µg/L |
| FB-3-24-22 | 8260B | Ethylbenzene | 0.25 µg/L |
| EB-3-24-22 | 200.7 | Dissolved Zinc | 0.0071 mg/L |
| EB-3-24-22 | 8015D | DRO | 0.027 mg/L |
| EB-3-24-22 | 8015D | MRO | 0.09 mg/L |
| EB-3-24-22 | 8260B | 2-Butanone | 9.2 µg/L |

Detections of the identified analytes in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of dissolved zinc in the associated samples that were greater than the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

The chloroform, DRO, and MRO results were previously qualified due to laboratory blank contamination in batches A86942, 66409, and 66409, respectively; therefore, additional qualification due to the trip, field, and equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples. Sample DUP-3-24-22 was collected as a field duplicate of sample OW-30.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? Yes

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples.

VALIDATION CRITERIA CHECKLIST

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? N/A

Comments: Laboratory duplicates were prepared for these analyses, and the laboratory duplicate sample sources are summarized in the following table.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>Laboratory Duplicate Sample Source</u> |
|---------------|-----------------|--------------|---|
| 4500CN E | Cyanide | WG1841516 | EB-3-24-22 |
| 4500CN E | Cyanide | WG1841516 | Not Associated |

Not Associated – The laboratory duplicate sample source was not associated with this project.

The RPD for the laboratory duplicate prepared from a project sample was not applicable since the cyanide results for both measurements were non-detections.

The RPD value for the laboratory duplicate sample prepared from a non-project sample was evaluated and considered, but data were not qualified based on this result since matrix similarity to project samples could not be guaranteed.

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? N/A

Comments: Target analytes were not reported by more than one method in this data set.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

VALIDATION CRITERIA CHECKLIST

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results. The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result
(mg/L)</u> | <u>Dissolved Result
(mg/L)</u> |
|------------------|----------------|--------------------------------|------------------------------------|
| OW-30 | Arsenic | 0.00066 | 0.00084 |

| Xylenes, Total | SW8260B | 0.85 µg/L | ND (1.5 µg/L) | DL |
| <p>Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.</p> <p>DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).</p> <p>+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.</p> | | | | |

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|--|
| EBD | Equipment blank detection |
| ERPD-LCS | The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision. |
| FBD | Field blank detection |
| HR-SUR | The surrogate percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-LCS | The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| LR-MS | The MS and/or MSD percent recovery was less than the lower acceptable limit indicating possible matrix interference. |
| MBD | Method blank detection |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |
| TBD | Trip blank detection |

| Reviewer: Mike Phillips, Senior Chemist and Charles Ballek, Senior Chemist | |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-3-8-22 | 2203496-001 |
| BW-5C | 2203496-002 |
| BW-5B | 2203496-003 |
| OW-50 | 2203496-004 |
| OW-52 | 2203496-005 |
| OW-29 | 2203496-006 |
| MKTF-43 | 2203496-007 |
| OW-10 | 2203496-008 |
| DUP-3-8-22 | 2203496-009 |
| FB 3-8-22 | 2203496-010 |
| Trip Blank | 2203496-011 |

This data validation report was revised to incorporate data from a re-issued laboratory report with changes in analytes, results, and quality control information.

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)
- ✓ Data Relationships (Item 23)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, February 2021.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| JB | Estimated concentration due to blank contamination |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| R | Rejected, data not usable |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 728 data points. The data completeness calculation does not include any submitted blank sample results. Sixty-eight data points were rejected. The data completeness measure for this data package is calculated to be 90.66% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformance related to this data set.

Method 8270: Samples with "S" flagged surrogates were reextracted and reanalyzed to confirm the original data.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

J – Analyte detected below quantitation limits

J – The identification of the analyte is acceptable; the reported value is an estimate.

J6 – The sample matrix interfered with the ability to make any accurate determination; spike value is low.

R – % RPD is outside of range.

S – % Recovery outside of range due to dilution or matrix interference.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by courier, and custody was maintained at all times.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| <u>Method</u> | <u>Sample(s)</u> | <u>Analyte(s)</u> | <u>Dilution Factor</u> |
|---------------|-------------------|-----------------------------------|------------------------|
| 200.7 | MKTF-43 | Select Dissolved Metals | 5 |
| 200.8 | Multiple Samples | Select Total and Dissolved Metals | 5 |
| 8015D | OW-29 | GRO | 5 |
| 200.8 | BW-5B | Barium (Total and Dissolved) | 10 |
| 200.8 | MKTF-43 | Select Total Metals | 10 |
| 200.8 | MKTF-43 | Select Dissolved Metals | 20 |
| 200.8 | BW-5C, DUP-3-8-22 | Total Barium | 50 |
| 8260B | OW-29 | MTBE | 100 |

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? No

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.

The CoC requested total and dissolved metals using only Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and therefore, was an acceptable replacement.

| VALIDATION CRITERIA CHECKLIST | |
|--|-----|
| 6. Were samples received in good condition within method-specified requirements? | No |
| <p>Comments: Samples were received on ice, in good condition, and with the cooler temperatures outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ between 0.0°C and 1.6°C as noted on the CoC and the <i>Sample Log-in Check List</i>. The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen.</p> <p>Samples transferred to Pace National were received in good condition with the cooler temperature within the recommended range at 5.8°C as noted on the CoC.</p> | |
| 7. Were samples extracted/digested and analyzed within method-specified or technical holding times? | Yes |
| Comments: The samples were extracted/digested and analyzed within method-specific holding times. | |
| 8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. | Yes |
| Comments: The results were reported in concentration units of micrograms per liter ($\mu\text{g/L}$) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested. | |
| 9. Did the laboratory provide any specific initial and/or continuing calibration results? | No |
| Comments: Initial and continuing calibration data were not included as part of this data set. | |
| 10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? | N/A |
| Comments: Initial and continuing calibration data were not included as part of this data set. | |
| 11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | Yes |
| Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples. | |
| 12. Were target analytes reported as not detected in the laboratory blanks? | No |
| <p>Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.</p> <p>DRO was detected in the laboratory blank for Method 8015D batch 66084 at a concentration of 0.030 mg/L. DRO results in the associated samples that were less than the laboratory reporting limit were assigned U qualifiers. DRO results greater than the laboratory reporting limit but less than 10 times the blank concentration were qualified assigned JB qualifiers. Non-detections of DRO in the associated samples and results greater than ten times the blank concentration did not require qualification.</p> <p>GRO was detected in the laboratory blank for Method 8015D batch R86565 at a concentration of 0.042 mg/L. GRO results in the associated samples that were less than the laboratory reporting limit were assigned U qualifiers. GRO results greater than the laboratory reporting limit but less than 10 times the blank concentration were qualified assigned JB qualifiers. GRO results greater than ten times the blank concentration did not require qualification.</p> | |

VALIDATION CRITERIA CHECKLIST

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batch. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>MS Sample Source</u> |
|---------------|--------------------|--------------|----------------------------|
| 200.7 | Dissolved Metals | C86413 | EB-3-8-22 |
| 200.8 | Total Metals | 66151 | Not Prepared |
| 200.8 | Total Metals | 66191 | EB-3-8-22, OW-50 |
| 200.8 | Dissolved Antimony | A86624 | Not Prepared |
| 200.8 | Dissolved Metals | B86418 | Not Prepared |
| 200.8 | Dissolved Metals | B86537 | EB-3-8-22, OW-52 |
| 200.8 | Dissolved Metals | B86600 | OW-10, DUP-3-8-22 |
| 200.8 | Dissolved Metals | C86418 | Not Prepared |
| 245.1 | Total Mercury | 66216 | OW-52 |
| 245.1 | Dissolved Mercury | 66259 | Not Prepared |
| 504.1 | EDB | 66148 | Not Prepared |
| 4500CN E | Cyanide | WG1831850 | Not Associated, EB-3-8-22 |
| 4500CN E | Cyanide | WG1832545 | Not Associated, DUP-3-8-22 |
| 8015D | TPH DRO and MRO | 66084 | Not Prepared |
| 8015D | GRO | R86565 | EB-3-8-22 |
| 8260B | VOC | B86433 | BW-5C |
| 8260B | MTBE | B86459 | Not Prepared |
| 8270C SIM | SVOC | 66057 | Not Prepared |
| 8270C | SVOC | 66091 | Not Prepared |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The MS/MSD percent recoveries and RPDs for project samples were within data validation and laboratory QC limits.

The percent recoveries and RPD values for MS/MSDs prepared from non-project samples were evaluated and considered, but data were not qualified based on those results since matrix similarity to project samples could not be guaranteed.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

VALIDATION CRITERIA CHECKLIST

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | LCS/LCSD RPD | RPD QC Limits |
|----------|---------------------|-------|--------------|---------------|
| 8270 SIM | Naphthalene | 66057 | 40.0% | 25.6% |
| 8270 SIM | 1-Methylnaphthalene | 66057 | 38.9% | 25.0% |
| 8270 SIM | 2-Methylnaphthalene | 66057 | 37.7% | 25.0% |
| 8270 SIM | Acenaphthene | 66057 | 31.4% | 27.8% |

The identified analytes were not detected in the associated samples, and the results were assigned UJ qualifiers due to evidence of poor precision.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

| Method | Surrogate | Sample | Surrogate Recovery | QC Limits |
|--------|-----------------------------|------------|--------------------|------------|
| 8270C | 2-Fluorophenol | EB-3-8-22 | 29.0% | 29.4-87.7% |
| 8270C | Phenol-d ₅ | EB-3-8-22 | 21.9% | 28.5-64.7% |
| 8270C | Nitrobenzene-d ₅ | EB-3-8-22 | 36.8% | 36.9-103% |
| 8270C | 2-Fluorobiphenyl | EB-3-8-22 | 36.7% | 38.1-99.9% |
| 8270C | 2-Fluorophenol | OW-50 | 0.0% | 29.4-87.7% |
| 8270C | Phenol-d ₅ | OW-50 | 1.7% | 28.5-64.7% |
| 8270C | Nitrobenzene-d ₅ | OW-50 | 0.0% | 36.9-103% |
| 8270C | 2-Fluorobiphenyl | OW-50 | 11.5% | 38.1-99.9% |
| 8270C | 2-Fluorophenol | OW-52 | 1.4% | 29.4-87.7% |
| 8270C | Phenol-d ₅ | OW-52 | 2.1% | 28.5-64.7% |
| 8270C | Nitrobenzene-d ₅ | OW-52 | 2.0% | 36.9-103% |
| 8270C | 2-Fluorobiphenyl | OW-52 | 5.4% | 38.1-99.9% |
| 8270C | 2-Fluorophenol | OW-29 | 2.1% | 29.4-87.7% |
| 8270C | Phenol-d ₅ | OW-29 | 6.9% | 28.5-64.7% |
| 8270C | Nitrobenzene-d ₅ | OW-29 | 3.1% | 36.9-103% |
| 8270C | 2-Fluorobiphenyl | OW-29 | 15.5% | 38.1-99.9% |
| 8270C | 2-Fluorophenol | MKTF-43 | 0.0% | 29.4-87.7% |
| 8270C | Phenol-d ₅ | MKTF-43 | 2.1% | 28.5-64.7% |
| 8270C | 2,4,6-Tribromophenol | MKTF-43 | 2.3% | 18.6-129% |
| 8270C | Nitrobenzene-d ₅ | MKTF-43 | 0.0% | 36.9-103% |
| 8270C | 2-Fluorobiphenyl | MKTF-43 | 3.0% | 38.1-99.9% |
| 8270C | 2-Fluorophenol | OW-10 | 0.0% | 29.4-87.7% |
| 8270C | Phenol-d ₅ | OW-10 | 1.3% | 28.5-64.7% |
| 8270C | Nitrobenzene-d ₅ | OW-10 | 0.0% | 36.9-103% |
| 8270C | 2-Fluorobiphenyl | OW-10 | 3.4% | 38.1-99.9% |
| 8270C | 2-Fluorophenol | DUP-3-8-22 | 0.0% | 29.4-87.7% |
| 8270C | Phenol-d ₅ | DUP-3-8-22 | 2.0% | 28.5-64.7% |

VALIDATION CRITERIA CHECKLIST

| Method | Surrogate | Sample | Surrogate Recovery | QC Limits |
|--------|-----------------------------|------------|--------------------|------------|
| 8270C | Nitrobenzene-d ₅ | DUP-3-8-22 | 0.0% | 36.9-103% |
| 8270C | 2-Fluorobiphenyl | DUP-3-8-22 | 8.3% | 38.1-99.9% |

Since Method 8270C surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range.

The target analytes associated with surrogate recoveries that were less than the lower laboratory QC limits were not detected in the affected samples, and these results were qualified as UJ due to evidence of potential low bias.

The target analytes associated with surrogate recoveries that were less than 10% were qualified as R if not detected in the identified samples indicating rejected results, data not usable. For samples OW-50 and OW-29, two of three base/neutral extractable surrogates were recovered above 10%, and these undetected associated results were qualified as UJ.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB 3-8-22, and one equipment blank sample, EB-3-8-22, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| Blank Sample ID | Method | Analyte | Concentration |
|-----------------|--------|-------------------------------|---------------|
| EB-3-8-22 | 8260B | Chloromethane | 0.47 µg/L |
| EB-3-8-22 | 8015D | Gasoline Range Organics (GRO) | 0.040 mg/L |
| EB-3-8-22 | 200.8 | Dissolved Chromium | 0.00027 mg/L |
| EB-3-8-22 | 245.1 | Dissolved Mercury | 0.00010 mg/L |
| EB-3-8-22 | 200.7 | Dissolved Zinc | 0.0054 mg/L |

Detections of the identified analytes in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. The detection of dissolved zinc in the associated sample OW-29 that was greater than the reporting limit but less than 10 times the blank result was assigned a JB qualifier. Non-detections of the identified analytes in the associated samples did not require qualification.

The GRO results for the samples in batch R86565 were previously qualified due to a laboratory blank detection; therefore, additional qualification due to the equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples.

Sample DUP-3-8-22 was collected as a field duplicate of sample West BW-5C.

VALIDATION CRITERIA CHECKLIST

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exception.

An RPD value could not be calculated for dissolved nickel for the field duplicate pair BW-5C and DUP-3-8-22 since the analyte was detected in the parent sample and was undetected in the duplicate sample. As the detection in the parent sample was greater than two times the reporting limit, dissolved nickel was qualified as J and UJ for the parent and duplicate samples, respectively.

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? N/A

Comments: Laboratory duplicates were prepared for these analyses, and the laboratory duplicate sample sources are summarized in the following table.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>Laboratory Duplicate
Sample Source</u> |
|---------------|-----------------|--------------|---|
| 4500CN E | Cyanide | WG1831850 | Not Associated |
| 4500CN E | Cyanide | WG1832545 | Not Associated, OW-10 |

The RPD for the laboratory duplicate prepared from a project sample could not be calculated because both measurements were reported as not detected.

The RPD values for laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

VALIDATION CRITERIA CHECKLIST

23. Were the following data relationships realistic and acceptable?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270), and the results were in agreement? Yes

Comments: Target analytes were not reported by more than one method in this data set, with the following exception.

The target analyte 1,2-dibromoethane (EDB) was reported from analyses by both Method 8260B and Method 504.1. This analyte was reported as not detected by both methods. Qualification of data was not required.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The total metals concentrations were greater than or equal to the dissolved fractions, with the following exceptions.

| Sample ID | Analyte | Total Result | Dissolved Result | Reporting Limit | Units | RPD |

----- RPD could not be calculated.

♦ = One or both of the detections were less than 5 times the applicable reporting limits, and qualification of data was not required.

The differences for the corresponding analytical results were within five times the applicable reporting limits, and validation action was not required, or the RPDs between the results were less than 30% indicating that the data were within the measurement uncertainty for the methods, and qualification of results was not required based on the analytical inconsistencies.

FIELD DUPLICATE SUMMARY

| Client Sample ID: BW-5C
Field Duplicate Sample ID: DUP-3-8-22 | | | | |
|--|---------------|--------------------|-------------------------|-----------------------------------|
| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
| 1,1-Dichloroethane | SW8260B | 0.82 µg/L | 0.81 µg/L | 1.2% +/-RL |
| 1,2-Dichloroethane | SW8260B | 0.68 µg/L | 0.67 µg/L | 1.5% +/-RL |

| Cobalt, Dissolved | E 200.7 | ND (0.0060 mg/L) | 0.0035 mg/L | DL |
| Zinc, Dissolved | E 200.7 | 0.0073 mg/L | 0.0069 mg/L | 5.6% +/-RL |

Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

An RPD value could not be calculated for dissolved nickel for the field duplicate pair BW-5C and DUP-3-8-22 since the analyte was detected in the parent sample and was undetected in the duplicate sample. As the detection in the parent sample was greater than two times the reporting limit, dissolved nickel was qualified as J and UJ for the parent and duplicate samples, respectively.

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| EBD | Equipment blank detection |
| ERPD-FD | High field duplicate RPD. |
| ERPD-LCS | The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision. |
| LR-SUR | The surrogate percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| MBD | Method blank detection |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |

Tier II Data Validation Report Summary

| | |
|--|--|
| Client: Marathon Oil | Laboratory: Hall Environmental Analysis Laboratory |
| Project Name: Western Refining Southwest, GW Sampling 2022 | Sample Matrix: Groundwater |
| Project Number: 697-080-002 Task: 0006 | Sample Start Date: 03/09/2022 |
| Date Validated: 03/30/2022 | Sample End Date: 03/09/2022 |
| Parameters Included:

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- Laboratory control samples (LCS)

Method compliance was established by reviewing sample integrity, holding times, detection limits, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| MKTF-41 | 2203571-001 |
| MKTF-32 | 2203571-002 |
| MKTF-34 | 2203571-003 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ⊗ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ✓ Laboratory Blanks (Items 11 and 12)
- Matrix Spikes (MS) and Matrix Spike Duplicates (MSD) (Items 13 and 14)
- ✓ LCS (Items 15 and 16)
- System Monitoring Compounds (i.e., Surrogates) (Item 17)
- Field, Equipment, and Trip Blanks (Items 18 and 19)
- Field Duplicates (Items 20 and 21)
- Laboratory Duplicates (Item 22)
- Data Relationships (Item 23)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|---------------------------|
| J | Estimated concentration |
| UJ | Estimated reporting limit |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 3 data points. The data completeness measure for this data package is calculated to be 100% and is acceptable.

| VALIDATION CRITERIA CHECKLIST | |
|---|-----|
| 1. Was the report free of non-conformances identified by the laboratory? | Yes |
| Comments: The laboratory did not identify non-conformances regarding the analytical data. | |
| 2. Were the data free of data qualification flags and/or notes used by the laboratory?
If no, define. | Yes |
| Comments: The laboratory did not apply qualification flags or other notes to the data in the laboratory report. | |
| 3. Were sample CoC forms and custody procedures complete? | Yes |
| Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by courier, and custody was maintained at all times. | |
| 4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? | Yes |
| Comments: The reporting limits for the analyses were reviewed and appeared to be acceptable. Dilutions were not applied for the analyses of the submitted samples. | |
| 5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? | Yes |
| Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC. | |
| 6. Were samples received in good condition within method-specified requirements? | No |
| Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ between 0.9°C and 3.5°C as noted on the CoC and the <i>Sample Log-in Check List</i> . The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen. | |
| 7. Were samples extracted/digested and analyzed within method-specified or technical holding times? | No |
| Comments: The samples were not analyzed within method-specific holding times.
Method 2540D: The submitted samples were analyzed outside the defined holding time of 7 days by approximately 1 day. Detected results for samples MKTF-32 and MKTF-34 by Method 2540D were assigned J qualifiers based on the holding time exceedances. The non-detect result for sample MKTF-41 was assigned a UJ qualifier based on the holding time exceedance. | |
| 8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. | Yes |
| Comments: The results were reported in concentration units of milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested. | |
| 9. Did the laboratory provide any specific initial and/or continuing calibration results? | No |
| Comments: Initial and continuing calibration data were not included as part of this data set. | |
| 10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? | N/A |
| Comments: Initial and continuing calibration data were not included as part of this data set. | |

| VALIDATION CRITERIA CHECKLIST | | |
|---|-----|--|
| 11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | Yes | |
| Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples. | | |
| 12. Were target analytes reported as not detected in the laboratory blanks? | Yes | |
| Comments: Target analytes were reported as not detected in the laboratory blanks. | | |
| 13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | No | |
| Comments: The total number of matrix spike samples prepared was not equal to at least 5% of the total number of samples. Matrix spikes were not prepared for the analyses in this data set. | | |
| 14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? | N/A | |
| Comments: MS/MSD samples were not prepared using project samples as the sample source. | | |
| 15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? | Yes | |
| Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples. | | |
| 16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? | Yes | |
| Comments: The LCS percent recoveries were within laboratory QC limits. LCSDs were not analyzed as part of this sample set. | | |
| 17. Were surrogate recoveries within laboratory QC limits? | N/A | |
| Comments: Surrogates were not required for the analyses included in this data set. | | |
| 18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? | No | |
| Comments: Trip, field, and equipment blank samples were not collected for this sample set. | | |
| 19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? | N/A | |
| Comments: Trip, field, and equipment blank samples were not collected for this sample set. | | |
| 20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? | No | |
| Comments: Field duplicates were not collected as part of this sample set. | | |
| 21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? | N/A | |
| Comments: Field duplicates were not collected as part of this sample set. | | |
| 22. For laboratory duplicates prepared from project samples, were RPDs within data validation or laboratory QC limits? | N/A | |
| Comments: Laboratory duplicate samples were not prepared for this sample set. | | |

| VALIDATION CRITERIA CHECKLIST | | |
|---|--|-----|
| 23. Were the following data relationships realistic and acceptable? | | |
| <ul style="list-style-type: none">Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270), and the results were in agreement? | | N/A |
| Comments: Target analytes were not reported by more than one method. | | |
| <ul style="list-style-type: none">Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? | | N/A |
| Comments: Total and dissolved metals analyses were not performed for this data set. | | |

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| HT-AN | Sample was analyzed outside of the method holding time. |

| Analyte | Method | Field Sample ID | Lab Sample ID | Result | Limit | Units | Reviewer Qualifier | DV Flag Reasons |
|-------------------------|-----------|-----------------|---------------|--------|-------|-------|--------------------|-----------------|
| Solids, Total Suspended | SM 2540 D | MKTF-32 | 2203571-002A | 91 | 4.0 | mg/L | J | HT-AN |
| Solids, Total Suspended | SM 2540 D | MKTF-34 | 2203571-003A | 27 | 4.0 | mg/L | J | HT-AN |
| Solids, Total Suspended | SM 2540 D | MKTF-41 | 2203571-001A | ND | 4.0 | mg/L | UJ | HT-AN |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

| FB 3-9-22 | 2203574-009 |
| Trip Blank | 2203574-010 |

This data validation report was revised to incorporate data from a re-issued laboratory report with changes in analytes, results, and quality control information.

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)
- ✓ Data Relationships (Item 23)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| JB | Estimated concentration due to blank contamination |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| R | Rejected, data not usable |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 637 data points. The data completeness calculation does not include any submitted blank sample results. Six data points were rejected. The data completeness measure for this data package is calculated to be 99.06% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformance related to this data set.

Method 8270: "S" flagged surrogates are due to sample dilution and/or matrix interferences.

Method 8015D: "S" flagged surrogates are due to sample dilution and/or matrix interferences.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

D – Sample diluted due to matrix.

J – Analyte detected below quantitation limits

J – The identification of the analyte is acceptable; the reported value is an estimate.

J6 – The sample matrix interfered with the ability to make any accurate determination; spike value is low.

R – % RPD is outside of range.

S – % Recovery outside of range due to dilution or matrix interference.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by courier, and custody was maintained at all times.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| Method | Sample(s) | Analyte(s) | Dilution Factor |
|----------|------------------------------|-----------------------------------|-----------------|
| 8015 | MKTF-32, DUP-3-9-22 | GRO | 2 |
| 8260B | MKTF-32, DUP-3-9-22 | VOCs | 2 |
| 200.8 | Multiple Samples | Select Total and Dissolved Metals | 5 |
| 504.1 | Multiple Samples | EDB | 10 |
| 8270C | MKTF-42, DUP-3-9-22 | SVOCs | 10 |
| 8270 SIM | MKTF-42 | 1,4-Dioxane | 20 |
| 8015D | MKTF-42, DUP-3-9-22 | DRO and MRO | 20 |
| 8260B | MKTF-32 | MTBE | 20 |
| 8270 SIM | MKTF-42, MKTF-41, DUP-3-9-22 | SVOCs | 20 |

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? No

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.

The CoC requested total and dissolved metals using Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

VALIDATION CRITERIA CHECKLIST

6. Were samples received in good condition within method-specified requirements?

No

Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ between 0.9°C and 3.5°C as noted on the CoC and the *Sample Log-in Check List*. The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen.

Samples transferred to Pace National were assumed to be received within the recommended temperature range, since results to the contrary were not reported.

7. Were samples extracted/digested and analyzed within method-specified or technical holding times?

Yes

Comments: The samples were extracted/digested and analyzed within method-specific holding times.

8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil.

Yes

Comments: The results were reported in concentration units of micrograms per liter ($\mu\text{g/L}$) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.

9. Did the laboratory provide any specific initial and/or continuing calibration results?

No

Comments: Initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits?

N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method?

Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

12. Were target analytes reported as not detected in the laboratory blanks?

No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

| Method | Analyte | Batch | Concentration |
|--------|-----------------------------|--------|-----------------------|
| 8260B | Chloromethane | R86565 | 0.65 $\mu\text{g/L}$ |
| 8260B | Trichloroethene | R86565 | 0.24 $\mu\text{g/L}$ |
| 8015D | GRO | R86565 | 0.042 mg/L |
| 8015D | DRO | 66129 | 0.026 mg/L |
| 245.1 | Dissolved and Total Mercury | 66260 | 0.00012 mg/L |

Detections of the identified analytes in the associated samples that were less than the applicable reporting limits were assigned U qualifiers. Detections of the identified analytes in the associated samples that were greater than the reporting limits but less than or equal to 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

VALIDATION CRITERIA CHECKLIST

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batch. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>MS Sample Source</u> |
|---------------|-----------------------------|--------------|-------------------------|
| 200.7 | Dissolved Metals | C86413 | EB-3-9-22 |
| 200.8 | Total Metals | 66151 | Not Prepared |
| 200.8 | Total Metals | 66191 | Not Prepared |
| 200.8 | Dissolved Metals | A86537 | Not Prepared |
| 200.8 | Dissolved Metals | A86624 | Not Prepared |
| 200.8 | Dissolved Metals | B86600 | Not Prepared |
| 245.1 | Dissolved and Total Mercury | 66259 | MKTF-41 |
| 245.1 | Dissolved and Total Mercury | 66260 | EB-3-9-22 |
| 504.1 | EDB | 66232 | Not Prepared |
| 4500CN E | Cyanide | WG1832548 | Not Associated, PW-4 |
| 8015D | TPH DRO and MRO | 66129 | Not Prepared |
| 8015D | GRO | R86565 | Not Prepared |
| 8260B | VOCs | R86565 | MKTF-42 |
| 8270C | SVOCs | 66111 | Not Prepared |
| 8270C SIM | SVOCs | 66214 | Not Prepared |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The MS/MSD percent recoveries and RPDs for project samples were within data validation and laboratory QC limits.

The percent recoveries and RPD values for MS/MSDs prepared from non-project samples were evaluated and considered, but data were not qualified based on those results since matrix similarity to project samples could not be guaranteed.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

VALIDATION CRITERIA CHECKLIST

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits | LCS/LCSD RPD | RPD QC Limits |
|--------|---------------------|--------|--------------|---------------|--------------------|--------------|---------------|
| 8270C | 1,4-Dichlorobenzene | 66111 | Acceptable | Acceptable | 15.0-87.6% | 32.0% | 30.4% |
| 8270C | Phenol | 66111 | Acceptable | Acceptable | 16.8-70.5% | 38.9% | 37.2% |
| 200.8 | Dissolved Selenium | A86537 | 69.2% | ----- | 70-130% | ----- | ----- |
| 245.1 | Mercury | 66259 | 143% | ----- | 70-130% | ----- | ----- |
| 245.1 | Mercury | 66260 | 140% | ----- | 70-130% | ----- | ----- |

1,4-Dichlorobenzene and phenol were not detected in the associated samples in Method 8270C batch 66111, and these results were assigned UJ qualifiers due to evidence of poor precision.

Dissolved selenium was not detected in the associated sample EB-3-9-22, and this result was qualified as UJ due to potential low bias.

Detections of mercury in the associated samples in Method 245.1 batches 66259 and 66260 were assigned J+ qualifiers due to evidence of potential high bias. The non-detect results for mercury in these batches did not require qualification based on these non-conformances.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

| Method | Surrogate | Sample | Surrogate Recovery | QC Limits |
|--------|-----------------------|---------|--------------------|------------|
| 8270C | 2-Fluorophenol | MKTF-34 | 0.0% | 29.4-87.7% |
| 8270C | Phenol-d ₅ | MKTF-34 | 5.8% | 28.5-64.7% |

Since Method 8270 surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the samples MKTF-41, MKTF-32, PW-3, and PW-4, and qualification of sample data was not required.

The acid fraction target analytes associated with the identified surrogate recoveries were not detected in sample MKTF-34. Since the surrogate recoveries were less than 10%, the results for the acid extractables were qualified as R indicating rejected results, data not usable, due to evidence of extreme low bias.

The DRO and MRO results for samples MKTF-42 and DUP-3-9-22 were not qualified based on the surrogate non-conformances in the Method 8015D analyses since the applied dilutions of 20 times resulted in surrogate concentrations below routinely calibrated levels, and those results were deemed unreliable and possibly inaccurate.

The SVOC results for samples MKTF-42 and DUP-3-9-22 were not qualified based on the surrogate non-conformances in the Method 8270C analyses since the applied dilutions of 10 times resulted in surrogate concentrations below routinely calibrated levels, and those results were deemed unreliable and possibly inaccurate.

The SVOC results for samples MKTF-42, MKTF-41, and DUP-3-9-22 were not qualified based on the surrogate non-conformances in the Method 8270 SIM analyses since the applied dilutions of 20 times resulted in surrogate concentrations below routinely calibrated levels, and those results were deemed unreliable and possibly inaccurate.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

VALIDATION CRITERIA CHECKLIST

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB 3-9-22, and one equipment blank sample, EB-3-9-22, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration</u> |
|------------------------|---------------|---------------------------|----------------------|
| Trip Blank | 8260B | Chloromethane | 0.70 µg/L |
| Trip Blank | 8260B | Methylene Chloride | 0.51 µg/L |
| FB-3-9-22 | 8260B | Acetone | 3.1 µg/L |
| FB-3-9-22 | 8260B | Chloromethane | 0.68 µg/L |
| FB-3-9-22 | 8260B | Methylene Chloride | 4.0 µg/L |
| EB-3-9-22 | 8260B | 1,2-Dichloroethane | 0.41 µg/L |
| EB-3-9-22 | 8260B | Chloromethane | 0.66 µg/L |
| EB-3-9-22 | 8015D | GRO | 0.039 mg/L |
| EB-3-9-22 | 8015D | DRO | 0.022 mg/L |
| EB-3-9-22 | 200.7 | Dissolved Zinc | 0.0045 mg/L |
| EB-3-9-22 | 200.8 | Dissolved Chromium | 0.00020 mg/L |
| EB-3-9-22 | 245.1 | Dissolved Mercury | 0.000095 mg/L |

Detections of the identified analytes in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of the identified analytes in the associated samples that were greater than or equal to the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

The chloromethane, dissolved mercury, DRO, and GRO results for the samples in batches R86565, 66260, 66129, and R86565, respectively, were previously qualified due to laboratory method blank detections; therefore, additional qualification due to the trip, field, and equipment blank detections was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples.

Sample DUP-3-9-22 was collected as a field duplicate of sample MKTF-42.

| VALIDATION CRITERIA CHECKLIST | |
|--|-----|
| 21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? | No |
| <p>Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exceptions.</p> <p>The RPD values for multiple analytes exceeded the data validation limit of 30%, which was evidence of poor precision. These analyte results were qualified as J for samples MKTF-42 and DUP-3-9-22.</p> <p>An RPD value could not be calculated for total chromium for the field duplicate pair MKTF-42 and DUP-3-9-22 since the analyte was detected in the parent sample and was undetected in the duplicate sample. As the detection in the parent sample was greater than two times the reporting limit, total chromium was qualified as J and UJ for the parent and duplicate samples, respectively.</p> | |
| 22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? | Yes |
| <p>Comments: Laboratory duplicates were prepared for the analysis of cyanide in batch WG1832548 from sample MKTF-32 and from a sample not associated with this data set.</p> <p>The RPD for the laboratory duplicate prepared from a project sample was within laboratory acceptance limits.</p> <p>The RPD value for the laboratory duplicate sample prepared from a non-project sample was evaluated and considered, but data were not qualified based on this result since matrix similarity to project samples could not be guaranteed.</p> | |

VALIDATION CRITERIA CHECKLIST

23. Were the following data relationships realistic and acceptable?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270), and the results were in agreement? Yes

Comments: Target analytes were not reported by more than one method in this data set, with the following exception.

The target analyte 1,2-dibromoethane (EDB) was reported from analyses by both Method 8260B and Method 504.1. This analyte was reported as not detected by both methods, or the results were less than the applicable RLs for the comparable analyses, or one or both results were within 5 times the applicable reporting limit. Validation action was not required.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The total metals concentrations were greater than or equal to the dissolved fractions, with the following exceptions.

| Sample ID | Analyte | Total Result | Dissolved Result | Reporting Limit | Units | RPD |
|------------|----------|--------------|------------------|-----------------|-------|---------|
| MKTF-41 | Mercury | 0.00011 | 0.00016 | 0.00020 | mg/L | ♦ |
| PW-3 | Mercury | ND | 0.000093 | 0.00020 | mg/L | ----- ♦ |
| EB-3-9-22 | Mercury | ND | 0.000095 | 0.00020 | mg/L | ----- ♦ |
| MKTF-41 | Arsenic | 0.0021 | 0.0023 | 0.0010 | mg/L | ♦ |
| MKTF-41 | Barium | 0.063 | 0.066 | 0.0050 | mg/L | 4.7% |
| MKTF-34 | Barium | 0.17 | 0.18 | 0.0050 | mg/L | 5.7% |
| PW-3 | Barium | 0.011 | 0.013 | 0.0010 / 0.0050 | mg/L | ♦ |
| EB-3-9-22 | Chromium | ND | 0.00020 | 0.0010 | mg/L | ----- ♦ |
| MKTF-34 | Cobalt | 0.0077 | 0.0080 | 0.0010 / 0.0060 | mg/L | ♦ |
| PW-3 | Cobalt | ND | 0.0032 | 0.0010 / 0.0060 | mg/L | ----- ♦ |
| PW-4 | Cobalt | ND | 0.0025 | 0.0010 / 0.0060 | mg/L | ----- ♦ |
| MKTF-42 | Zinc | ND | 0.011 | 0.010 | mg/L | ----- ♦ |
| MKTF-41 | Zinc | ND | 0.0097 | 0.010 | mg/L | ----- ♦ |
| MKTF-34 | Zinc | 0.0086 | 0.013 | 0.010 | mg/L | ♦ |
| PW-3 | Zinc | 0.0080 | 0.012 | 0.010 | mg/L | ♦ |
| PW-4 | Zinc | 0.014 | 0.022 | 0.010 | mg/L | ♦ |
| DUP-3-9-22 | Zinc | ND | 0.013 | 0.010 | mg/L | ----- ♦ |
| EB-3-9-22 | Zinc | ND | 0.0045 | 0.010 | mg/L | ----- ♦ |

----- RPD could not be calculated.

♦ = One or both of the detections were less than 5 times the applicable reporting limits, and qualification of data was not required.

The differences for the corresponding analytical results were within five times the applicable reporting limits, and validation action was not required, or the RPDs between the results were less than 30% indicating that the data were within the measurement uncertainty for the methods, and qualification of results was not required based on the analytical inconsistencies.

FIELD DUPLICATE SUMMARY

| Client Sample ID: MKTF-42
Field Duplicate Sample ID: DUP-3-9-22 | | | | |
|--|----------------|--------------------|-------------------------|-----------------------------------|
| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
| Vanadium, Dissolved | E 200.7 | 0.058 mg/L | 0.056 mg/L | 3.5% +/-RL |
| Zinc, Dissolved | E 200.7 | 0.011 mg/L | 0.013 mg/L | 16.7% +/-RL |

| Isopropylbenzene | SW8260B | 1.5 µg/L | 3.3 µg/L | 75.0% +/-RL |
| MTBE | SW8260B | 1.2 µg/L | 2.5 µg/L | 70.3% +/-RL |
| n-Butylbenzene | SW8260B | 0.46 µg/L | 1.2 µg/L | 89.2% +/-RL |
| n-Propylbenzene | SW8260B | 1.6 µg/L | 3.5 µg/L | 74.5% +/-RL |
| p-Isopropyltoluene | SW8260B | 0.37 µg/L | 0.84 µg/L | 77.7% +/-RL |
| sec-Butylbenzene | SW8260B | 0.38 µg/L | 0.85 µg/L | 76.4% +/-RL |
| Toluene | SW8260B | 0.43 µg/L | 1.2 µg/L | 94.5% +/-RL |
| Vinyl Chloride | SW8260B | ND (1.0 µg/L) | 0.87 µg/L | DL |
| Xylenes, Total | SW8260B | 26 µg/L | 56 µg/L | 73.2% |
| Naphthalene | SW8270C | ND (2.0 µg/L) | 2.0 µg/L | DL |

Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

The RPD values for multiple analytes exceeded the data validation limit of 30%, which was evidence of poor precision. These analyte results were qualified as J for samples MKTF-42 and DUP-3-9-22.

An RPD value could not be calculated for total chromium for the field duplicate pair MKTF-42 and DUP-3-9-22 since the analyte was detected in the parent sample and was undetected in the duplicate sample. As the detection in the parent sample was greater than two times the reporting limit, total chromium was qualified as J and UJ for the parent and duplicate samples, respectively.

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| MBD | Method blank detection |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-LCS | The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| ERPD-LCS | The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision. |
| LR-SUR | The surrogate percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| TBD | Trip blank detection |
| FBD | Field blank detection |
| EBD | Equipment blank detection |
| ERPD-FD | High field duplicate RPD. |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |

Tier II Data Validation Report Summary

| | |
|---|--|
| Client: Marathon Oil | Laboratory: Hall Environmental Analysis Laboratory |
| Project Name: Western Refining Southwest, Q1 GW Sampling | Sample Matrix: Groundwater |
| Project Number: 697-080-002 Task: 0006 | Sample Start Date: 03/10/2022 |
| Date Validated: 09/19/2022 | Sample End Date: 03/10/2022 |
| Parameters Included: <ul style="list-style-type: none"> ▪ Volatile Organic Compounds (VOCs) by Environmental Protection Agency (EPA) Test Methods for Evaluating Solid Waste (SW-846) Method 8260B ▪ 1,2-Dibromoethane (EDB) by EPA Method 504.1 ▪ Semivolatile Organic Compounds (SVOCs) by SW-846 Method 8270C and Method 8270C with Selected Ion Monitoring (SIM) ▪ Total Petroleum Hydrocarbons (TPH) Gasoline Range Organics (GRO) by SW-846 Method 8015D ▪ TPH Diesel Range Organics (DRO) and Motor Oil Range Organics (MRO) by SW-846 Method 8015D Modified ▪ Total and Dissolved Metals by EPA Method 200.7 and Method 200.8 ▪ Total and Dissolved Mercury by EPA Method 245.1 ▪ Cyanide by Standard Methods for the Examination of Water and Wastewater (SM) Method 4500 CN E ▪ Per- and Polyfluorinated Alkyl Substances (PFAS) by Liquid Chromatography with Tandem Mass Spectrometry (LC-MS/MS) and Isotope Dilution (ID) | |
| Laboratory Project ID: 2203667 | |
| Data Validator: Daran O'Hollearn, Lead Project Scientist | |
| Reviewer: Charles Ballek, Senior Chemist | |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace National of Mount Juliet, Tennessee, and from Vista Analytical Laboratory of El Dorado Hills, California, evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ⊗ Laboratory Identified Issues (Item 1)
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ⊗ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates and Internal Standards) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Data review and evaluation was performed following criteria set forth in Data Review and Validation Guidelines for Perfluoroalkyl Substances (PFASs) Analyzed Using EPA Method 537, document number EPA 910-R-18-001, November 2018.
- Data were reviewed and evaluated according to criteria set forth in the Department of Defense (DoD) / Department of Energy (DOE) Quality Systems Manual (QSM) for Environmental Laboratories, Version 5.3, 2019.

Tier II Data Validation Report Summary

- Data were reviewed and evaluated according to criteria set forth in Data Validation Guidelines Module 3: Data Validation Procedure for Per- and Polyfluoroalkyl Substances Analysis by QSM Table B-15, United States Department of Defense, Environmental Data Quality Workgroup, May 2020.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| Qualifier | Definition |
|-----------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| J- | The result is an estimated concentration, but may be biased low |
| JB | Estimated concentration due to blank contamination |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| R | Rejected, data not usable |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 654 data points. The data completeness calculation does not include any submitted blank sample results. One data points was rejected. The data completeness measure for this data package is calculated to be 99.85% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformance related to this data set.

Method 8270C SIM: A laboratory error on the spiking of the LCS/LCSD occurred. The LCS/LCSD for only the 8270 SIM compound was spiked with the inappropriate spike and the laboratory could not determine the LCS/LCSD concentrations for the samples in this batch (R86533). The surrogate recoveries were all acceptable for the 8270 SIM samples and all other method criteria were met. We have flagged all compounds with an "E" flag to represent the fact that the data for the 8270SIM test should be considered estimated. **The samples in Method 8270C SIM batch R86533 were assigned J qualifiers for detections and UJ for non-detections due to incomplete required quality control analyses.**

Method 8270C: "S" flagged surrogates denote low surrogate recoveries due to matrix interferences/sample dilution.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No

If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

D – Sample diluted due to matrix.

E – Estimated value.

H – Recovery was outside laboratory acceptance criteria.

J – Analyte detected below quantitation limits.

J3 – The associated batch QC was outside the established quality control range for precision.

J6 – The sample matrix interfered with the ability to make any accurate determination; spike value is low.

R – RPD value outside of range.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. The laboratory noted that the shipping containers were sealed, and custody seals were present and intact on the shipping containers.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| Method | Sample(s) | Analyte(s) | Dilution Factor |
|--------|-----------------------|----------------------------|-----------------|
| 200.7 | OW-57, OW-63, MKTF-35 | Total and Dissolved Barium | 5 |
| 200.8 | MKTF-35 | Select Total Metals | 5 |
| 245.1 | DUP 3-10-22, MKTF-35 | Total Mercury | 5 |
| 200.7 | OW-58, MKTF-35 | Total and Dissolved Barium | 10 |
| 504.1 | Multiple Samples | EDB | 10 |
| 8015 D | OW-58, OW-57, OW-58A | DRO and MRO | 10 |
| 8015D | MKTF-35 | GRO | 10 |
| 8260B | MKTF-35 | Select VOCs | 10 |
| 8015D | OW-58A | GRO | 20 |
| 8260B | OW-58A | Select VOCs | 20 |
| 8015D | OW-58, OW-57, OW-63 | GRO | 50 |

| VALIDATION CRITERIA CHECKLIST | | | | |
|-------------------------------|--------|---------------------|-------------|-----------------|
| | Method | Sample(s) | Analyte(s) | Dilution Factor |
| | 8260B | OW-58, OW-57, OW-63 | Select VOCs | 50 |
| | 8260B | MKTF-35 | Select VOCs | 100 |
| | 8260B | OW-58A | Benzene | 200 |
| | 8260B | OW-58, OW-57, OW-63 | Benzene | 500 |

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? No

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.

The CoC requested total and dissolved metals using Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

6. Were samples received in good condition within method-specified requirements? No

Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ between -0.5°C to 5.3°C as noted on the CoC and the *Sample Log-in Check List*. Samples transferred to Pace National were received in good condition with the cooler temperature outside the recommended range at 1.7°C as noted on the CoC. Samples transferred to Vista were received in good condition with the cooler temperature outside the recommended range at 0.7°C as noted on the Sample Log-in Checklist. The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen.

7. Were samples extracted/digested and analyzed within method-specified or technical holding times? Yes

Comments: The samples were extracted/digested and analyzed within method-specific holding times.

8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. Yes

Comments: The results were reported in concentration units of nanograms per liter (ng/L), micrograms per liter (µg/L), and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.

9. Did the laboratory provide any specific initial and/or continuing calibration results? No

Comments: Initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

VALIDATION CRITERIA CHECKLIST

12. Were target analytes reported as not detected in the laboratory blanks? No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

| Method | Analyte | Batch | Concentration |
|--------|---------------|--------|---------------|
| 8015D | DRO | 66129 | 0.026 mg/L |
| 8015D | DRO | 66219 | 0.018 mg/L |
| 8260B | Chloromethane | R86601 | 0.66 µg/L |
| 8260B | Chloromethane | R86626 | 0.68 µg/L |
| 8015D | GRO | R86601 | 0.044 mg/L |
| 8015D | GRO | G86626 | 0.034 mg/L |

Detections of DRO, GRO, and chloromethane in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of GRO in the associated samples that were greater than the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were greater than the reporting limit and greater than ten times the blank concentration did not require qualification.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| Method | Analytes | Batch | MS Sample Source |
|-------------|-----------------------------|-----------|-------------------|
| 200.7 | Total Metals | 66641 | Not Prepared |
| 200.7 | Total Metals | 66642 | OW-57, OW-58 |
| 200.7 | Dissolved Metals | A86443 | Not Prepared |
| 200.7 | Dissolved Barium | A87332 | Not Prepared |
| 200.8 | Total Metals | 66191 | Not Prepared |
| 200.8 | Dissolved Metals | A86482 | EB 3-10-22 |
| 200.8 | Dissolved Lead | A86537 | MKTF-46 |
| 245.1 | Total and Dissolved Mercury | 66283 | DUP 3-10-22 |
| 504.1 | EDB | 66149 | Not Prepared |
| 504.1 | EDB | 66232 | Not Prepared |
| 4500CN E | Cyanide | WG1834196 | EB 3-10-22, OW-63 |
| 8015D | TPH DRO and MRO | 66129 | Not Prepared |
| 8015D | TPH DRO and MRO | 66219 | Not Prepared |
| 8015D | TPH GRO | G86626 | Not Prepared |
| 8015D | TPH GRO | R86601 | Not Prepared |
| 8260B | VOCs | R86601 | MKTF-46 |
| 8260B | VOCs | R86626 | Not Prepared |
| 8270C | SVOCs | 66142 | Not Prepared |
| 8270C SIM | 1,4-Dioxane | R86533 | Not Prepared |
| PFAS Method | PFAs | B22C148 | Not Prepared |

Not Prepared – Matrix spikes were not prepared/reported for this batch.

VALIDATION CRITERIA CHECKLIST

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? No

Comments: The percent recoveries and RPDs for MS/MSDs prepared from project samples were within data validation and laboratory QC limits or were not applicable because the unspiked amount was more than four times the spike added, with the following exceptions, with the following exceptions.

The MS recovery for cyanide in Method 4500 CN E batch WG1834196 was outside the QC limits of 75-125% at 74.2%. Cyanide results were qualified as J- if detected and UJ if not detected in the associated samples due to evidence of potential low bias.

Also, the MS/MSD RPD for cyanide Method 4500 CN E batch WG1834196 exceeded the QC limit of 20% at 28.4%. The associated sample results were qualified as J if detected or UJ if not detected due to evidence of poor precision.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits | LCS/LCSD RPD | RPD QC Limits |
|----------|--------------------|--------|--------------|---------------|--------------------|--------------|---------------|
| 200.7 | Total Nickel | 66642 | 67.7% | ----- | 70-130% | ----- | ----- |
| 200.8 | Dissolved Antimony | A86482 | 67.8% | ----- | 70-130% | ----- | ----- |
| 8015D | TPH DRO | 66219 | 77.8% | Acceptable | 31.7-75.4% | Acceptable | 20% |
| 8270 SIM | Acenaphthene | R86533 | Acceptable | Acceptable | 29.8-82.7% | 40.5% | 27.8% |

The total nickel and dissolved antimony results were qualified as J- if detected and UJ if not detected in the associated samples due to evidence of potential low bias.

Detections of TPH DRO in the associated samples in batch 66219 were qualified as J+ due to evidence of potential high bias.

The acenaphthene results were qualified as J for detections and UJ for non-detections for the associated samples due to evidence of poor precision.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

Since Method 8270C surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the sample MKTF-35, and qualification of sample data was not required.

The DRO and MRO results for samples OW-57, OW-58, and OW-58A were not qualified based on the surrogate non-conformances in the Method 8015D analysis since the applied dilutions of 10 times resulted in a surrogate concentrations below routinely calibrated levels, and this result was deemed unreliable and possibly inaccurate.

The PFAS Method extracted internal standard (EIS) $^{13}\text{C}_3$ -PFBA for sample OW-63 was recovered outside the data validation limits of 50-150% at 19.5%. The associated target analyte PFBA was not detected in sample OW-63, and this result was qualified as R due to evidence of extreme low bias (recovery less than 20%).

VALIDATION CRITERIA CHECKLIST

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, two field blank samples, FB 3-10-22 and PFAS-FB, and one equipment blank sample, EB 3-10-22, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration</u> |
|------------------------|------------------|-----------------------|----------------------|
| Trip Blank | 8260B | Benzene | 0.29 µg/L |
| Trip Blank | 8260B | Chloromethane | 0.69 µg/L |
| Trip Blank | 8015D | TPH GRO | 0.034 mg/L |
| FB 3-10-22 | 8260B | Acetone | 4.5 µg/L |
| FB 3-10-22 | 8260B | Benzene | 0.37 µg/L |
| FB 3-10-22 | 8015D | TPH GRO | 0.040 mg/L |
| EB 3-10-22 | 8260B | 2-Butanone | 5.7 µg/L |
| EB 3-10-22 | 8260B | Chloromethane | 0.78 µg/L |
| EB 3-10-22 | 8015D | TPH GRO | 0.039 mg/L |
| EB 3-10-22 | 8015D | TPH DRO | 0.025 mg/L |
| EB 3-10-22 | 8270C SIM | Pyrene | 0.24 µg/L |
| EB 3-10-22 | 200.7 | Dissolved Zinc | 0.0070 mg/L |

Detections of benzene, pyrene, and dissolved zinc in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of pyrene and dissolved zinc in the associated samples that were greater than the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

The chloromethane (batches R86601 and R86626), TPH GRO (batches R86601 and R86626), and TPH DRO (batches 66129 and 66219) results were previously qualified due to laboratory blank contamination; therefore, additional qualification due to the trip and equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples. Sample DUP-3-10-22 was collected as a field duplicate of sample MKTF-46.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exception.

The RPD value for naphthalene exceeded the data validation limit of 30% at 61.5%. The naphthalene results were qualified as J for samples MKTF-46 and DUP-3-10-22 due to evidence of poor precision.

VALIDATION CRITERIA CHECKLIST

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? N/A

Comments: Laboratory duplicates were prepared for these analyses, and the laboratory duplicate sample sources are summarized in the following table.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>Laboratory Duplicate Sample Source</u> |
|---------------|-----------------|--------------|---|
| 4500CN E | Cyanide | WG1834196 | Not Associated |
| 4500CN E | Cyanide | WG1834196 | MKTF-35 |

Not Associated – The laboratory duplicate sample source was not associated with this project.

The RPDs for laboratory duplicates prepared from project samples were not applicable since the result for one or both measurements were within 5 times the reporting limit.

The RPD values for the laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? N/A

Comments: Target analytes were not reported by more than one method in this data set.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results. The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
|------------------|----------------|----------------------------|--------------------------------|
| MKTF-46 | Antimony | ND | 0.0015 |
| MKTF-35 | Antimony | ND | 0.00071 |
| OW-58A | Barium | 0.90 | 0.94 |
| OW-63 | Barium | 4.3 | 4.6 |
| OW-57 | Nickel | 0.055 | 0.057 |
| OW-58A | Nickel | 0.034 | 0.037 |
| OW-63 | Nickel | 0.025 | 0.027 |
| OW-63 | Vanadium | 0.0026 | 0.0027 |
| OW-58 | Zinc | ND | 0.0091 |
| OW-57 | Zinc | ND | 0.0080 |
| OW-58A | Zinc | ND | 0.015 |
| OW-63 | Zinc | ND | 0.015 |
| DUP 3-10-22 | Zinc | ND | 0.0081 |
| EB 3-10-22 | Zinc | ND | 0.0070 |
| MKTF-46 | Zinc | ND | 0.0099 |

FIELD DUPLICATE SUMMARY

| Client Sample ID: MKTF-46
Field Duplicate Sample ID: DUP-3-10-22 | | | | |
|---|----------------|-------------------|------------------|-----------------------------------|
| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
| 1,2,4-Trimethylbenzene | SW8260B | 0.37 µg/L | 1.1 µg/L | 99.3% +/-RL |
| 1,3,5-Trimethylbenzene | SW8260B | ND (1.0 µg/L) | 0.21 µg/L | DL |
| Benzene | SW8260B | ND (1.0 µg/L) | 0.39 µg/L | DL |
| Chlorobenzene | SW8260B | 0.19 µg/L | 0.38 µg/L | 66.7% +/-RL |
| Chloromethane | SW8260B | 0.67 µg/L | 0.67 µg/L | 0.0% +/-RL |
| sec-Butylbenzene | SW8260B | 0.21 µg/L | 0.37 µg/L | 55.2% +/-RL |
| Xylenes, Total | SW8260B | 0.77 µg/L | 1.8 µg/L | 80.2% +/-RL |

| Arsenic, Dissolved | E200.8 | 0.00093 mg/L | 0.00096 mg/L | 3.2% +/-RL |
| Arsenic, Total | E200.8 | 0.0012 mg/L | 0.0012 mg/L | 0.0% +/-RL |
| Lead, Total | E200.8 | 0.0011 mg/L | 0.0010 mg/L | 9.5% |
| <p>Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.</p> <p>DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).</p> <p>+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.</p> <p>The RPD value for naphthalene exceeded the data validation limit of 30% at 61.5%, which was evidence of poor precision. The naphthalene results were qualified as J for samples MKTF-46 and DUP-3-10-22.</p> | | | | |

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|--|
| HZ-QAQC | Analysis of QA/QC samples was not performed at the required frequency. |
| MBD | Method blank detection |
| LR-MS | The MS and/or MSD percent recovery was less than the lower acceptable limit indicating possible matrix interference. |
| ERP-D-MS | The MS/MSD RPD exceeded the upper acceptable limit indicating poor precision. |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-LCS | The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| ERP-D-LCS | The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision. |
| LR-EIS | The extracted internal standard (EIS) recovery was less than the lower acceptance limit. |
| EBD | Equipment blank detection |
| TBD | Trip blank detection |
| ERP-D-FD | High field duplicate RPD. |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |

Tier II Data Validation Report Summary

| | |
|---|--|
| Client: Marathon Oil | Laboratory: Hall Environmental Analysis Laboratory |
| Project Name: Western Refining Southwest, GW Sampling 2022 | Sample Matrix: Groundwater |
| Project Number: 697-080-002 Task: 0006 | Sample Start Date: 03/10/2022 |
| Date Validated: 03/31/2022 | Sample End Date: 03/10/2022 |
| Parameters Included: <ul style="list-style-type: none">Total Suspended Solids (TSS) by Standard Methods for the Examination of Water and Wastewater (SM) Method 2540D | |
| Laboratory Project ID: 2203670 | |
| Data Validator: Daran O'Hollearn, Lead Project Scientist | |
| Reviewer: Mike Phillips, Senior Chemist | |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report package generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- Laboratory control samples (LCS)

Method compliance was established by reviewing sample integrity, holding times, detection limits, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| OW-57 | 2203670-001 |
| OW-58A | 2203670-002 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ✓ Laboratory Blanks (Items 11 and 12)
- Matrix Spikes (MS) and Matrix Spike Duplicates (MSD) (Items 13 and 14)
- ✓ LCS (Items 15 and 16)
- System Monitoring Compounds (i.e., Surrogates) (Item 17)
- Field, Equipment, and Trip Blanks (Items 18 and 19)
- Field Duplicates (Items 20 and 21)
- Laboratory Duplicates (Item 22)
- Data Relationships (Item 23)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Trihydro Data Validation Variance Documentation, February 2021.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers were not applied as a result of this validation.

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 2 data points. The data completeness measure for this data package is calculated to be 100% and is acceptable.

| VALIDATION CRITERIA CHECKLIST | |
|--|-----|
| 1. Was the report free of non-conformances identified by the laboratory? | Yes |
| Comments: The laboratory did not identify non-conformances regarding the analytical data. | |
| 2. Were the data free of data qualification flags and/or notes used by the laboratory?
If no, define. | Yes |
| Comments: The laboratory did not apply qualification flags or other notes to the data in the laboratory report. | |
| 3. Were sample CoC forms and custody procedures complete? | Yes |
| Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by courier, and custody was maintained at all times. | |
| 4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? | Yes |
| Comments: The reporting limits for the analyses were reviewed and appeared to be acceptable. Dilutions were not applied for the analyses of the submitted samples. | |
| 5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? | Yes |
| Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC. | |
| 6. Were samples received in good condition within method-specified requirements? | No |
| Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ between -0.8°C and 5.3°C as noted on the CoC and the <i>Sample Log-in Check List</i> . The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen. | |
| 7. Were samples extracted/digested and analyzed within method-specified or technical holding times? | Yes |
| Comments: The samples were analyzed within method-specific holding times. | |
| 8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. | Yes |
| Comments: The results were reported in concentration units of milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested. | |
| 9. Did the laboratory provide any specific initial and/or continuing calibration results? | No |
| Comments: Initial and continuing calibration data were not included as part of this data set. | |
| 10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? | N/A |
| Comments: Initial and continuing calibration data were not included as part of this data set. | |
| 11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | Yes |
| Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples. | |
| 12. Were target analytes reported as not detected in the laboratory blanks? | Yes |
| Comments: Target analytes were reported as not detected in the laboratory blanks. | |

| VALIDATION CRITERIA CHECKLIST | |
|---|-----|
| 13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | No |
| Comments: The total number of matrix spike samples prepared was not equal to at least 5% of the total number of samples. Matrix spikes were not prepared for the analyses in this data set. | |
| 14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? | N/A |
| Comments: MS/MSD samples were not prepared using project samples as the sample source. | |
| 15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? | Yes |
| Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples. | |
| 16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? | Yes |
| Comments: The LCS percent recoveries were within laboratory QC limits. LCSDs were not analyzed as part of this sample set. | |
| 17. Were surrogate recoveries within laboratory QC limits? | N/A |
| Comments: Surrogates were not required for the analyses included in this data set. | |
| 18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? | No |
| Comments: Trip, field, and equipment blank samples were not collected for this sample set. | |
| 19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? | N/A |
| Comments: Trip, field, and equipment blank samples were not collected for this sample set. | |
| 20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? | No |
| Comments: Field duplicates were not collected as part of this sample set. | |
| 21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? | N/A |
| Comments: Field duplicates were not collected as part of this sample set. | |
| 22. For laboratory duplicates prepared from project samples, were RPDs within data validation or laboratory QC limits? | N/A |
| Comments: Laboratory duplicate samples were not prepared for this sample set. | |

| VALIDATION CRITERIA CHECKLIST | | |
|---|--|-----|
| 23. Were the following data relationships realistic and acceptable? | | |
| <ul style="list-style-type: none">Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270), and the results were in agreement? | | N/A |
| Comments: Target analytes were not reported by more than one method. | | |
| <ul style="list-style-type: none">Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? | | N/A |
| Comments: Total and dissolved metals analyses were not performed for this data set. | | |

DATA QUALIFICATION SUMMARY

Data qualifiers were not applied as a result of this validation.

Tier II Data Validation Report Summary

| | |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB 3-15-22 | 2203825-001 |
| OW-1 | 2203825-002 |
| MKTF-17R | 2203825-003 |
| MKTF-18R | 2203825-004 |
| MKTF-38 | 2203825-005 |
| MKTF-04R | 2203825-006 |
| MKTF-11 | 2203825-007 |
| MKTF-10 | 2203825-008 |
| FB 3-15-22 | 2203825-009 |
| DUP-3-15-22 | 2203825-010 |
| Trip Blank | 2203825-011 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ⊗ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)
- ✓ Data Relationships (Item 23)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, February 2021.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| J- | The result is an estimated concentration, but may be biased low |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |
| R | Rejected, data not usable |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 720 data points. The data completeness calculation does not include submitted blank sample results. Three data points were rejected. The data completeness measure for this data package is calculated to be 99.58% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformance related to this data set.

Method 8270: "S" flagged surrogates denote low surrogate recoveries due to matrix interferences/sample dilution.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

D – Sample diluted due to matrix.

J – Analyte detected below quantitation limits

J6 – The sample matrix interfered with the ability to make any accurate determination; spike value is low.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by courier, and custody was maintained at all times.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| <u>Method</u> | <u>Sample(s)</u> | <u>Analyte(s)</u> | <u>Dilution Factor</u> |
|---------------|------------------------|----------------------------|------------------------|
| 200.8 | MKTF-38 | Dissolved Barium | 5 |
| 200.8 | MKTF-11, MKTF-10, OW-1 | Select Total Metals | 5 |
| 8015D | MKTF-04R | GRO | 5 |
| 8260B | MKTF-04R | VOCs | 5 |
| 200.8 | MKTF-17R | Dissolved Barium | 10 |
| 8015D | Multiple Samples | DRO, MRO, GRO | 10 |
| 8260B | Multiple Samples | VOCs | 10 |
| 8270 SIM | MKTF-04R | 1,4-Dioxane | 10 |
| 200.8 | MKTF-38, MKTF-17R | Total Barium | 20 |
| 200.8 | MKTF-04R | Dissolved Barium | 20 |
| 200.8 | MKTF-18R, MKTF-04R | Total Barium | 50 |
| 200.8 | MKTF-18R | Dissolved Barium | 50 |
| 8260B | MKTF-04R | Benzene | 50 |
| 8260B | Multiple Samples | Select VOCs | 100 |
| 200.8 | MKTF-11 | Dissolved and Total Barium | 200 |
| 200.8 | MKTF-10 | Dissolved and Total Barium | 500 |
| 8260B | MKTF-17R | Toluene | 1,000 |

VALIDATION CRITERIA CHECKLIST

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? No

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.

The CoC requested total and dissolved metals using Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

6. Were samples received in good condition within method-specified requirements? No

Comments: Samples were received on ice, in good condition, and with the cooler temperatures outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ between -0.1°C and 1.0°C as noted on the CoC and the *Sample Log-in Check List*. The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen.

Samples transferred to Pace National were received in good condition with the cooler temperature within the recommended range at 3.0°C as noted on the CoC.

7. Were samples extracted/digested and analyzed within method-specified or technical holding times? Yes

Comments: The samples were extracted/digested and analyzed within method-specific holding times.

8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. Yes

Comments: The results were reported in concentration units of micrograms per liter ($\mu\text{g/L}$) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.

9. Did the laboratory provide any specific initial and/or continuing calibration results? No

Comments: Initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

12. Were target analytes reported as not detected in the laboratory blanks? No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

| Method | Analyte | Batch | Concentration |
|----------|---------------|--------|----------------------|
| 8015D | DRO | 66219 | 0.018 mg/L |
| 8015D | DRO | 66236 | 0.030 mg/L |
| 8260B | Chloromethane | R86601 | 0.66 $\mu\text{g/L}$ |
| 8260B | Chloromethane | R86626 | 0.68 $\mu\text{g/L}$ |
| 8270 SIM | Pyrene | R86628 | 0.22 $\mu\text{g/L}$ |

VALIDATION CRITERIA CHECKLIST

| Method | Analyte | Batch | Concentration |
|--------|---------|--------|---------------|
| 8015D | GRO | R86601 | 0.044 mg/L |
| 8015D | GRO | G86626 | 0.034 mg/L |

Detections of the identified analytes in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of the identified analytes in the associated samples that were greater than the reporting limits but less than or equal to 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batch. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| Method | Analytes | Batch | MS Sample Source |
|-----------|-----------------------------|-----------|--------------------------|
| 200.7 | Dissolved Metals | A86535 | EB 3-15-22 |
| 200.8 | Total Metals | 66254 | EB 3-15-22, OW-1 |
| 200.8 | Dissolved Metals | A86624 | MKTF-11, MKTF-10 |
| 200.8 | Dissolved Metals | B86600 | Not Prepared |
| 245.1 | Dissolved and Total Mercury | 66284 | DUP-3-15-22 |
| 504.1 | EDB | 66256 | Not Prepared |
| 4500CN E | Cyanide | WG1835677 | Not Associated, MKTF-04R |
| 8015D | TPH DRO and MRO | 66219 | Not Prepared |
| 8015D | TPH DRO and MRO | 66236 | Not Prepared |
| 8015D | TPH GRO | G86626 | Not Prepared |
| 8015D | TPH GRO | R86601 | Not Prepared |
| 8260B | VOCs | R86601 | Not Prepared |
| 8260B | VOCs | R86626 | Not Prepared |
| 8270C | SVOCs | 66226 | Not Prepared |
| 8270C SIM | SVOCs | R86628 | Not Prepared |
| 8270C SIM | 1,4-Dioxane | R86665 | Not Prepared |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? No

Comments: The MS/MSD percent recoveries and RPDs for project samples were within data validation and laboratory QC limits, with the following exception.

The MSD recovery for cyanide in Method 4500CN E batch WG1835677 (R86794) was outside the data validation QC limits of 75-125% at 74.8%. Cyanide results were qualified as J- if detected and UJ if not detected in the associated samples due to evidence of potential low bias.

The percent recoveries and RPD values for MS/MSDs prepared from non-project samples were evaluated and considered but data were not qualified based on those results since matrix similarity to project samples could not be guaranteed.

VALIDATION CRITERIA CHECKLIST

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exception.

The LCS recovery for DRO in Method 8015D batch 66219 was outside the acceptance limits of 31.7-75.4% at 77.8%. DRO was detected in the associated samples, and these results were qualified as J+ due to potential high bias.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

| Method | Surrogate | Sample | Surrogate Recovery | QC Limits |
|--------|-----------------------|----------|--------------------|------------|
| 8270C | 2-Fluorophenol | MKTF-17R | 0.0% | 29.4-87.7% |
| 8270C | Phenol-d ₅ | MKTF-17R | 27.3% | 28.5-64.7% |
| 8270C | Phenol-d ₅ | MKTF-11 | 26.9% | 28.5-64.7% |
| 8270C | 2,4,6-Tribromophenol | MKTF-11 | 12.6% | 18.6-129% |
| 8270C | 2-Fluorophenol | MKTF-10 | 0.0% | 29.4-87.7% |
| 8270C | Phenol-d ₅ | MKTF-10 | 24.7% | 28.5-64.7% |
| 8270C | 2,4,6-Tribromophenol | MKTF-10 | 1.8% | 18.6-129% |

Since Method 8270 surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the sample DUP-3-15-22, and qualification of sample data was not required.

For samples MKTF-17R and MKTF-11, two or three of the three acid extractable surrogates reported recoveries above 10%. Therefore, the associated target analytes in these samples with surrogate recoveries that were less than the lower laboratory QC limits were qualified as J- if detected and UJ if not detected due to potential low bias.

For sample MKTF-10, two of the three acid extractable surrogates were recovered below 10%. The target analytes associated with surrogate recoveries that were less than 10% were qualified as R if not detected in the identified samples indicating rejected results, data not usable due to evidence of extreme low bias. The detected results were qualified as J- for sample MKTF-10 due to potential low bias.

The DRO and MRO results for samples MKTF-17R and MKTF-18R were not qualified based on the surrogate non-conformances in the Method 8015D analyses since the applied dilutions of 10 times resulted in surrogate concentrations below routinely calibrated levels, and those results were deemed unreliable and possibly inaccurate.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB 3-15-22, and one equipment blank sample, EB 3-15-22, were collected as part of this sample set.

VALIDATION CRITERIA CHECKLIST

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration</u> |
|------------------------|---------------|---------------------------|----------------------|
| Trip Blank | 8260B | GRO | 0.035 mg/L |
| Trip Blank | 8260B | Chloromethane | 0.66 µg/L |
| FB 3-15-22 | 8260B | 1,1-Dichloroethene | 0.57 µg/L |
| FB 3-15-22 | 8260B | 2-Butanone | 7.9 µg/L |
| FB 3-15-22 | 8260B | Chloromethane | 0.89 µg/L |
| EB 3-15-22 | 200.7 | Dissolved Zinc | 0.0063 mg/L |
| EB 3-15-22 | 200.8 | Dissolved Barium | 0.00082 mg/L |
| EB 3-15-22 | 8015D | DRO | 0.026 mg/L |
| EB 3-15-22 | 8015D | GRO | 0.037 mg/L |
| EB 3-15-22 | 8260B | 2-Butanone | 7.30 µg/L |
| EB 3-15-22 | 8260B | Benzene | 0.23 µg/L |
| EB 3-15-22 | 8260B | Chloromethane | 0.91 µg/L |

Detections of the identified analytes in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of dissolved zinc in the associated samples that were greater than or equal to the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

The chloromethane, DRO, and GRO results were previously qualified due to laboratory blank contamination; therefore, additional qualification due to the trip, field, and equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples. Sample DUP-3-15-22 was collected as a field duplicate of sample OW-1.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exceptions.

RPD values could not be calculated for 1-methylnaphthalene and 2-methylnaphthalene for the field duplicate pair OW-1 and DUP-3-15-22 since the analytes were detected in the parent sample and were undetected in the duplicate sample. As the detections in the parent sample were greater than two times the reporting limits, 1-methylnaphthalene and 2-methylnaphthalene were qualified as J and UJ for the parent and duplicate samples, respectively.

VALIDATION CRITERIA CHECKLIST

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? N/A

Comments: Laboratory duplicates were prepared for the analysis of cyanide in batch WG1835677 from sample EB 3-15-22 and from a sample not associated with this data set.

The RPD for the laboratory duplicate prepared from a project sample was not applicable since the results for one or both measurements were within 5 times the reporting limit.

The RPD value for the laboratory duplicate sample prepared from a non-project sample was evaluated and considered, but data were not qualified based on this result since matrix similarity to project samples could not be guaranteed.

23. Were the following data relationships realistic and acceptable?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270), and the results were in agreement? Yes

Comments: Target analytes were not reported by more than one method in this data set, with the following exception.

The target analyte 1,2-dibromoethane (EDB) was reported from analyses by both Method 8260B and Method 504.1. This analyte was reported as not detected by both methods.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The total metals concentrations were greater than or equal to the dissolved fractions, with the following exceptions.

| Sample ID | Analyte | Total Result | Dissolved Result | Reporting Limit | Units | RPD |
|-------------|----------|--------------|------------------|-----------------|-------|---------|
| OW-1 | Mercury | ND | 0.00036 | 0.00020 | mg/L | ----- ♦ |
| MKTF-10 | Barium | 7.9 | 8.7 | 0.50 | mg/L | 9.6% |
| DUP-3-15-22 | Barium | 0.041 | 0.044 | 0.0010 | mg/L | 7.1% |
| EB 3-15-22 | Barium | ND | 0.00082 | 0.0010 | mg/L | ----- ♦ |
| OW-1 | Barium | 0.044 | 0.046 | 0.0050 / 0.0010 | mg/L | 4.4% |
| MKTF-11 | Cobalt | 0.0039 | 0.0058 | 0.0050 / 0.0060 | mg/L | ♦ |
| MKTF-17R | Cobalt | 0.0023 | 0.0033 | 0.0010 / 0.0060 | mg/L | ♦ |

----- RPD could not be calculated.

♦ = One or both of the detections were less than 5 times the applicable reporting limits, and qualification of data was not required.

The differences for the corresponding analytical results were within five times the applicable reporting limits and validation action was not required, or the RPDs between the results were less than 30% indicating that the data were within the measurement uncertainty for the methods, and qualification of results was not required based on the analytical inconsistencies.

FIELD DUPLICATE SUMMARY

| Client Sample ID: OW-1
Field Duplicate Sample ID: DUP-3-15-22 | | | | |
|--|----------------|-------------------|-----------------------|-----------------------------------|
| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
| Vanadium, Dissolved | E 200.7 | 0.041 mg/L | 0.044 mg/L | 7.1% +/-RL |

| Pyrene | SW8270C | 0.24 µg/L | ND (0.40 µg/L) | DL |
| <p>Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.</p> <p>DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).</p> <p>+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.</p> <p>RPD values could not be calculated for 1-methylnaphthalene and 2-methylnaphthalene since the analytes were detected in the parent sample and were undetected in the duplicate sample. As the detections in the parent sample were greater than two times the reporting limits, 1-methylnaphthalene and 2-methylnaphthalene were qualified as J and UJ for the parent and duplicate samples, respectively.</p> | | | | |

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|--|
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-MS | The MS and/or MSD percent recovery was less than the lower acceptable limit indicating possible matrix interference. |
| LR-SUR | The surrogate percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| EBD | Equipment blank detection |
| FBD | Field blank detection |
| ERPD-FD | High field duplicate RPD. |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB 3-16-22 | 2203920-001 |
| MKTF-40 | 2203920-002 |
| MKTF-31 | 2203920-003 |
| MKTF-25 | 2203920-004 |
| MKTF-24 | 2203920-005 |
| MKTF-02R | 2203920-006 |
| FB 3-16-22 | 2203920-007 |
| DUP-3-16-22 | 2203920-008 |
| Trip Blank | 2203920-009 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ⊗ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ⊗ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates and Internal Standards) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ✓ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|---|
| J | Estimated concentration |
| J- | The result is an estimated concentration, but may be biased low |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |
| R | Rejected, data not usable |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 540 data points. The data completeness calculation does not include any submitted blank sample results. Seven data points were rejected. The data completeness measure for this data package is calculated to be 98.70% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformance related to this data set.

Method 8270C: "S" flagged surrogates denote low surrogate recoveries due to matrix interferences/sample dilution.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

J – Analyte detected below quantitation limits

J3 – The associated batch QC was outside the established quality control range for precision.

J6 – The sample matrix interfered with the ability to make any accurate determination; spike value is low.

P1 – RPD value not applicable for sample concentrations less than 5 times the reporting limit.

R – RPD value outside of range.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. The laboratory noted that the shipping containers were sealed, and custody seals were present and intact on the shipping containers.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| Method | Sample(s) | Analyte(s) | Dilution Factor |
|-----------|----------------------------|-----------------------------------|-----------------|
| 200.8 | Multiple Samples | Select Total and Dissolved Metals | 5 |
| 245.1 | MKTF-24 | Total Mercury | 5 |
| 8015D | MKTF-31, DUP-3-16-22 | GRO | 5 |
| 8260B | MKTF-31, DUP-3-16-22 | VOCs | 5 |
| 8015D | MKTF-25, MKTF-24 | GRO | 10 |
| 8260B | MKTF-02R, MKTF-25, MKTF-24 | VOCs | 10 |
| 8270C SIM | Multiple Samples | 1,4-Dioxane | 10 |
| 504.1 | MKTF-02R | EDB | 20 |
| 8260B | MKTF-24 | Benzene | 100 |

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? No

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.

The CoC requested total and dissolved metals using Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

VALIDATION CRITERIA CHECKLIST

6. Were samples received in good condition within method-specified requirements?

No

Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ at 0.2°C , 0.9°C , 1.3°C , and 3.9°C as noted on the CoC and the *Sample Log-in Check List*. Samples transferred to Pace National were received in good condition with the cooler temperature outside the recommended range at 0.6°C as noted on the CoC. The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen.

7. Were samples extracted/digested and analyzed within method-specified or technical holding times?

No

Comments: The samples were extracted/digested and analyzed within method-specific holding times, with the following exceptions.

Method 4500 CN E: Samples EB 3-16-22, MKTF-40, MKTF-31, and MKTF-25 were analyzed for cyanide outside the defined holding time of 14 days by approximately 1 day. Cyanide was detected in samples MKTF-40, MKTF-31, and MKTF-25 by Method 4500 CN E and the results were assigned J qualifiers based on the holding time exceedances. The non-detect result for sample EB 3-16-22 was assigned an R qualifier to indicate that the result was rejected based on the holding time exceedance.

8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil.

Yes

Comments: The results were reported in concentration units of micrograms per liter ($\mu\text{g/L}$) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.

9. Did the laboratory provide any specific initial and/or continuing calibration results?

No

Comments: Initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits?

N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method?

Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

12. Were target analytes reported as not detected in the laboratory blanks?

No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

| Method | Analyte | Batch | Concentration |
|--------|---------------|--------|-----------------------|
| 8015D | DRO | 66236 | 0.030 mg/L |
| 8260B | Chloromethane | R86626 | 0.68 $\mu\text{g/L}$ |
| 8260B | Chloromethane | R86666 | 0.66 $\mu\text{g/L}$ |
| 8015D | GRO | G86626 | 0.034 $\mu\text{g/L}$ |

Detections of DRO, chloromethane, and GRO in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of DRO in the associated samples that were greater than the reporting limits but less than or equal to 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

VALIDATION CRITERIA CHECKLIST

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>MS Sample Source</u> |
|---------------|-----------------------------|--------------|--------------------------|
| 200.7 | Total Metals | 66642 | Not Prepared |
| 200.7 | Total Metals | 66643 | Not Prepared |
| 200.7 | Dissolved Metals | A86535 | Not Prepared |
| 200.8 | Total Metals | 66254 | Not Prepared |
| 200.8 | Dissolved Metals | B86624 | Not Prepared |
| 245.1 | Total and Dissolved Mercury | 66370 | MKTF-24 |
| 504.1 | EDB | 66256 | Not Prepared |
| 4500CN E | Cyanide | WG1838528 | Not Associated |
| 4500CN E | Cyanide | WG1837590 | Not Associated |
| 4500CN E | Cyanide | WG1836404 | Not Associated, MKTF-02R |
| 8015D | TPH DRO and MRO | 66236 | Not Prepared |
| 8015D | TPH GRO | G86626 | MKTF-31 |
| 8260B | VOCs | R86626 | MKTF-40 |
| 8260B | VOCs | R86666 | Not Prepared |
| 8270C | SVOCs | 66244 | Not Prepared |
| 8270C SIM | SVOCs | R86665 | Not Prepared |
| 8270C SIM | 1,4-Dioxane | R86694 | Not Prepared |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? No

Comments: The MS/MSD percent recoveries and RPDs for project samples were within data validation and laboratory QC limits, with the following exceptions.

| <u>Method</u> | <u>Analyte</u> | <u>Batch</u> | <u>MS/MSD RPD</u> | <u>RPD QC Limits</u> |
|------------------|----------------|------------------|-------------------|----------------------|
| 4500 CN E | Cyanide | WG1836404 | 23% | 20% |
| 8015D | TPH GRO | G86626 | 26.9% | 20% |

The identified analytes with MS/MSD RPD values that were above the QC limit were qualified as J for detections and UJ for non-detections for the associated samples due to evidence of poor precision.

The percent recoveries and RPD values for MS/MSDs prepared from non-project samples were evaluated and considered, but data were not qualified based on those results since matrix similarity to project samples could not be guaranteed.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

VALIDATION CRITERIA CHECKLIST

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| <u>Method</u> | <u>Analyte</u> | <u>Batch</u> | <u>LCS Recovery</u> | <u>LCS/LCSD QC Limits</u> |
|---------------|----------------|--------------|---------------------|---------------------------|
| 200.7 | Total Nickel | 66642 | 67.7% | 70-130% |
| 200.7 | Total Nickel | 66643 | 69.0% | 70-130% |

Detections of total nickel in the associated samples were assigned J- qualifiers due to potential low bias. Total nickel was not detected in the associated sample EB 3-16-22 and the result was assigned a UJ qualifier.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

| <u>Method</u> | <u>Surrogate</u> | <u>Sample</u> | <u>Surrogate Recovery</u> | <u>QC Limits</u> |
|---------------|-----------------------|---------------|---------------------------|------------------|
| 8270C | 2-Fluorophenol | MKTF-02R | 6.13% | 29.4-87.7% |
| 8270C | Phenol-d ₅ | MKTF-02R | 19.0% | 28.5-64.7% |
| 8270C | 2,4,6-Tribromophenol | MKTF-02R | 2.36% | 18.6-129% |

Since Method 8270C surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. **Since 2 of the 3 acid fraction surrogates were recovered below 10% in sample MKTF-02R, acid fraction analytes were assigned R qualifiers indicating rejected results.**

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB 3-16-22, and one equipment blank sample, EB 3-16-22, were collected as part of this sample set.

VALIDATION CRITERIA CHECKLIST

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration</u> |
|------------------------|---------------|---------------------------|----------------------|
| Trip Blank | 8260B | 1,1-Dichloroethene | 0.68 µg/L |
| Trip Blank | 8260B | Chloromethane | 0.69 µg/L |
| FB-3-16-22 | 8260B | 1,1-Dichloroethene | 0.57 µg/L |
| FB-3-16-22 | 8260B | 2-Butanone | 5.7 µg/L |
| FB-3-16-22 | 8260B | Chloromethane | 0.84 µg/L |
| EB 3-16-22 | 200.7 | Dissolved Zinc | 0.0067 mg/L |
| EB 3-16-22 | 8015D | GRO | 0.036 mg/L |
| EB 3-16-22 | 8260B | 2-Butanone | 8.5 µg/L |
| EB 3-16-22 | 8260B | Chloromethane | 1.1 µg/L |

Detections of 1,1-dichloroethene, 2-butanone, and dissolved zinc in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of dissolved zinc in the associated samples that were greater than the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

The chloromethane (batches R86626 and R86666) and GRO (batch G86626) results were previously qualified due to laboratory blank contamination; therefore, additional qualification due to the trip, field, and equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples. Sample DUP-3-16-22 was collected as a field duplicate of sample MKTF-31.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? Yes

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples.

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? Yes

Comments: Laboratory duplicates were prepared for these analyses, and the laboratory duplicate sample sources are summarized in the following table.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>Laboratory Duplicate Sample Source</u> |
|---------------|-----------------|--------------|---|
| 4500CN E | Cyanide | WG1836404 | Not Associated, MKTF-24 |
| 4500CN E | Cyanide | WG1837590 | MKTF-25. Not Associated |
| 4500CN E | Cyanide | WG1838528 | MKTF-31, Not Associated |

Not Associated – The laboratory duplicate sample source was not associated with this project.

The RPDs for laboratory duplicates prepared from project samples were within laboratory acceptance limits or were not applicable since the result for one or both measurements were within 5 times the reporting limit.

The RPD values for the laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

VALIDATION CRITERIA CHECKLIST

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? N/A

Comments: Target analytes were not reported by more than one method in this data set.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results. The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
|------------------|----------------|----------------------------|--------------------------------|
| MKTF-24 | Arsenic | 0.0030 | 0.0031 |
| MKTF-24 | Barium | 0.76 | 0.81 |
| MKTF-40 | Cobalt | 0.0039 | 0.0051 |
| MKTF-40 | Nickel | 0.0094 | 0.010 |
| MKTF-24 | Nickel | 0.031 | 0.033 |
| MKTF-02R | Nickel | 0.013 | 0.014 |
| MKTF-40 | Silver | ND | 0.0016 |
| MKTF-02R | Silver | ND | 0.0016 |
| EB 3-16-22 | Zinc | ND | 0.0067 |
| MKTF-40 | Zinc | 0.0079 | 0.010 |
| MKTF-24 | Zinc | 0.0076 | 0.0088 |
| MKTF-02R | Zinc | 0.011 | 0.013 |

FIELD DUPLICATE SUMMARY

| <p>Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.</p> <p>DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).</p> <p>+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.</p> | | | | |

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| HT-AN | Sample was analyzed outside of the method holding time. |
| ERP-MS | The MS/MSD RPD exceeded the upper acceptable limit indicating poor precision. |
| LR-LCS | The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| LR-SUR | The surrogate percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| MBD | Method blank detection |
| EBD | Equipment blank detection |
| FBD | Field blank detection |
| TBD | Trip blank detection |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB 3-17-22 | 2203989-001 |
| MKTF-01R | 2203989-002 |
| MKTF-27 | 2203989-003 |
| MKTF-28 | 2203989-004 |
| MKTF-29 | 2203989-005 |
| MKTF-30 | 2203989-006 |
| FB 3-17-22 | 2203989-007 |
| DUP-3-17-22 | 2203989-008 |
| Trip Blank | 2203989-009 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates and Internal Standards) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|---|
| J | Estimated concentration |
| J- | The result is an estimated concentration, but may be biased low |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |
| R | Rejected, data not usable |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 540 data points. The data completeness calculation does not include any submitted blank sample results. Eighteen data points were rejected. The data completeness measure for this data package is calculated to be 96.67% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformances related to this data set.

"S" flagged surrogates denote low surrogate recoveries due to matrix interferences/sample dilution.

Naphthalene was reported by EPA Method 8270 instead of EPA Method 8270 SIM because of its elevated concentration for sample MKTF-01R.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No

If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

E – Estimated value. *This laboratory flag was applied only to QC sample and surrogate results in the laboratory report, and qualification of sample data was not required.*

J – Analyte detected below quantitation limits.

J6 – The sample matrix interfered with the ability to make any accurate determination; spike value is low.

P1 – RPD value not applicable for sample concentrations less than 5 times the reporting limit.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by courier, and custody was maintained at all times.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| Method | Sample(s) | Analyte(s) | Dilution Factor |
|--------|-------------------------------|----------------------------|-----------------|
| 200.7 | MKTF-27, DUP-3-17-22 | Total and Dissolved Metals | 5 |
| 200.8 | MKTF-27, MKTF-29, DUP-3-17-22 | Total and Dissolved Metals | 5 |
| 245.1 | MKTF-29 | Total Mercury | 5 |
| 200.7 | MKTF-01R | Total and Dissolved Barium | 10 |
| 8015 | MKTF-01R | GRO | 10 |
| 8260B | MKTF-01R | Select VOCs | 10 |
| 8260B | MKTF-01R | Benzene | 100 |

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? No

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.

The CoC requested total and dissolved metals using Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

VALIDATION CRITERIA CHECKLIST

6. Were samples received in good condition within method-specified requirements?

No

Comments: Samples were received on ice, in good condition, and with the cooler temperatures outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ between 0.3°C and 1.7°C as noted on the CoC and the *Sample Log-in Check List*. Samples transferred to Pace National were received in good condition with the cooler temperature within the recommended range at 2.3°C as noted on the CoC. The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen.

7. Were samples extracted/digested and analyzed within method-specified or technical holding times?

Yes

Comments: The samples were extracted/digested and analyzed within method-specific holding times.

8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil.

Yes

Comments: The results were reported in concentration units of micrograms per liter ($\mu\text{g/L}$) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.

9. Did the laboratory provide any specific initial and/or continuing calibration results?

No

Comments: Initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits?

N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method?

Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

12. Were target analytes reported as not detected in the laboratory blanks?

No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

| <u>Method</u> | <u>Analyte</u> | <u>Batch</u> | <u>Concentration</u> |
|---------------|----------------|--------------|----------------------|
| 8015D | DRO | 66267 | 0.027 mg/L |
| 8260B | Chloromethane | R86626 | 0.68 $\mu\text{g/L}$ |
| 8015D | GRO | G86626 | 0.034 mg/L |

Detections of the identified analytes in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of DRO and GRO in the associated samples that were greater than the reporting limits but less than or equal to 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

VALIDATION CRITERIA CHECKLIST

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batch. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| Method | Analytes | Batch | MS Sample Source |
|-----------|-----------------------------|-----------|----------------------|
| 200.7 | Total Metals | 66643 | MKTF-01R, MKTF-27 |
| 200.7 | Dissolved Metals | A86575 | EB 3-17-22 |
| 200.7 | Dissolved Barium | A87332 | Not Prepared |
| 200.8 | Total Metals | 66341 | EB 3-17-22, MKTF-01R |
| 200.8 | Dissolved Metals | A86633 | MKTF-27 |
| 200.8 | Dissolved Metals | B86624 | Not Prepared |
| 245.1 | Total and Dissolved Mercury | 66371 | Not Prepared |
| 504.1 | EDB | 66256 | Not Prepared |
| 504.1 | EDB | 66262 | Not Prepared |
| 4500CN E | Cyanide | WG1836836 | MKTF-01R, MKTF-30 |
| 8015D | TPH DRO and MRO | 66267 | Not Prepared |
| 8015D | TPH GRO | G86626 | Not Prepared |
| 8260B | VOCs | R86626 | Not Prepared |
| 8270C | SVOCs | 66282 | Not Prepared |
| 8270C SIM | SVOCs | R86694 | Not Prepared |

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? No

Comments: The MS/MSD percent recoveries and RPDs for project samples were within data validation and laboratory QC limits, with the following exceptions.

The MS and MSD recoveries for cyanide in Method 4500 CN E batch WG1836836 were outside the laboratory QC limits of 90-110% at 86.2% and 79.2%, respectively. However, the recoveries were within data validation limits of 75-125%. Validation action was not required.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exception.

The LCS recovery for total nickel in Method 200.7 batch 66643 were outside the data validation acceptance limits of 70-130% at 69%, indicating a potential low bias. Associated samples with detections for total nickel were qualified with J- flags due to possible low bias, and the associated samples with non-detections for total nickel were qualified with a UJ flag due to possible low bias.

VALIDATION CRITERIA CHECKLIST

17. Were surrogate recoveries within laboratory QC limits?

No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

| Method | Surrogate | Sample | Surrogate Recovery | QC Limits |
|--------|-----------------------|-------------|--------------------|------------|
| 8270C | 2-Fluorophenol | MKTF-27 | 5.18% | 29.4-87.7% |
| 8270C | Phenol-d ₅ | MKTF-27 | 10.6% | 28.5-64.7% |
| 8270C | 2,4,6-Tribromophenol | MKTF-27 | 2.12% | 18.6-129% |
| 8270C | 2-Fluorophenol | MKTF-29 | 5.56% | 29.4-87.7% |
| 8270C | Phenol-d ₅ | MKTF-29 | 18.0% | 28.5-64.7% |
| 8270C | 2,4,6-Tribromophenol | MKTF-29 | 1.77% | 18.6-129% |
| 8270C | 2-Fluorophenol | DUP-3-17-22 | 3.92% | 29.4-87.7% |
| 8270C | Phenol-d ₅ | DUP-3-17-22 | 9.97% | 28.5-64.7% |
| 8270C | 2,4,6-Tribromophenol | DUP-3-17-22 | 1.87% | 18.6-129% |

Since Method 8270C surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range.

The associated analytes were not detected in the listed samples. Since the recoveries for 2 of 3 surrogates in each of the identified samples were below 10%, these non-detected results were qualified as R indicating rejected results, data not usable.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit?

Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB 3-17-22, and one equipment blank sample, EB 3-17-22, were collected as part of this sample set.

VALIDATION CRITERIA CHECKLIST

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration</u> |
|------------------------|---------------|---------------------------|----------------------|
| Trip Blank | 8260B | Chloromethane | 0.69 µg/L |
| FB-3-17-22 | 8260B | 2-Butanone | 5.1 µg/L |
| FB-3-17-22 | 8260B | Chloromethane | 0.71 µg/L |
| EB-3-17-22 | 200.7 | Dissolved Zinc | 0.0044 mg/L |
| EB-3-17-22 | 8015D | TPH DRO | 0.021 mg/L |
| EB-3-17-22 | 8015D | TPH GRO | 0.037 mg/L |
| EB-3-17-22 | 8260B | 1,1-Dichloroethene | 0.54 µg/L |
| EB-3-17-22 | 8260B | 2-Butanone | 5.3 µg/L |

Detections of 2-butanone and dissolved zinc in the associated samples that were less than the applicable reporting limits were assigned U qualifiers. The detection of 1,1-dichloroethene in the associated sample MKTF-30 that was greater than the reporting limit but less than 10 times the blank result was assigned a JB qualifier. Non-detections of the identified analytes in the associated samples did not require qualification.

The chloromethane, DRO, and GRO results were previously qualified due to laboratory blank contamination in batches R86626, 66267, and G86626, respectively; therefore, additional qualification due to the trip, field, and equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples. Sample DUP-3-17-22 was collected as a field duplicate of sample MKTF-27.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exception.

The RPD value for total cyanide exceeded the data validation limit of 30% at 90.0%, which was evidence of poor precision. The total cyanide results were qualified as J for samples MKTF-27 and DUP-3-17-22.

VALIDATION CRITERIA CHECKLIST

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? N/A

Comments: Laboratory duplicates were prepared for these analyses and the laboratory duplicate sample sources are summarized in the following table.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>Laboratory Duplicate Sample Source</u> |
|---------------|-----------------|--------------|---|
| 4500CN E | Cyanide | WG1836836 | Not Associated |
| 4500CN E | Cyanide | WG1836836 | MKTF-28 |

Not Associated – The laboratory duplicate sample source was not associated with this project.

The RPD for the laboratory duplicate prepared from a project sample was not applicable since the cyanide results for both measurements were non-detections.

The RPD value for the laboratory duplicate sample prepared from a non-project sample was evaluated and considered, but data were not qualified based on this result since matrix similarity to project samples could not be guaranteed.

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? N/A

Comments: Target analytes were not reported by more than one method in this data set.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results. The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
|------------------|----------------|----------------------------|--------------------------------|
| MKTF-01R | Barium | 5.1 | 5.6 |
| MKTF-29 | Barium | 0.21 | 0.22 |

| 1,4-Dioxane | SW8270C | 3.3 µg/L | 3.6 µg/L | 8.7% |
| <p>Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.</p> <p>DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).</p> <p>+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.</p> <p>The RPD value for total cyanide exceeded the data validation limit of 30% at 90.0%, which was evidence of poor precision. The total cyanide results were qualified as J for samples MKTF-27 and DUP-3-17-22.</p> | | | | |

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| EBD | Equipment blank detection |
| ERPD-FD | High field duplicate RPD. |
| FBD | Field blank detection |
| LR-LCS | The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| LR-SUR | The surrogate percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| MBD | Method blank detection |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |

Western Refining Southwest LLC
D/B/A Marathon Gallup Refinery
2022 Annual Groundwater Monitoring Report

Appendix D-2. 2nd Quarter Data Validation Reports

Tier II Data Validation Report Summary

| | |
|---|--|
| Client: Marathon Oil | Laboratory: Hall Environmental Analysis Laboratory |
| Project Name: Western Refining Southwest, Q2 GW Sampling | Sample Matrix: Aqueous |
| Project Number: 697-080-002 Task: 0006 | Sample Start Date: 06/21/2022 |
| Date Validated: 09/19/2022 | Sample End Date: 06/21/2022 |
| Parameters Included: <ul style="list-style-type: none"> ▪ Volatile Organic Compounds (VOCs) by Environmental Protection Agency (EPA) Test Methods for Evaluating Solid Waste (SW-846) Method 8260B ▪ 1,2-Dibromoethane (EDB) by EPA Method 504.1 ▪ Semivolatile Organic Compounds (SVOCs) by SW-846 Method 8270C and Method 8270C with Selected Ion Monitoring (SIM) ▪ Total Petroleum Hydrocarbons (TPH) Gasoline Range Organics (GRO) by SW-846 Method 8015D ▪ TPH Diesel Range Organics (DRO) and Motor Oil Range Organics (MRO) by SW-846 Method 8015D Modified ▪ Total and Dissolved Metals by EPA Method 200.7 and Method 200.8 ▪ Total and Dissolved Mercury by EPA Method 245.1 ▪ Cyanide by Standard Methods for the Examination of Water and Wastewater (SM) Method 4500 CN E | |
| Laboratory Project ID: 2206B30 | |
| Data Validator: Daran O'Hollearn, Lead Project Scientist | |
| Reviewer: Charles Ballek, Senior Chemist | |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace National of Mount Juliet, Tennessee, evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-6-21-22 | 2206B30-001 |
| MKTF-46 | 2206B30-002 |
| MKTF-18R | 2206B30-003 |
| MKTF-35 | 2206B30-004 |
| MKTF-38 | 2206B30-005 |
| MKTF-11 | 2206B30-006 |
| MKTF-16 | 2206B30-007 |
| FB-6-21-22 | 2206B30-008 |
| DUP-6-21-22 | 2206B30-009 |
| Trip Blank | 2206B30-010 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| J- | The result is an estimated concentration, but may be biased low |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 628 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformances related to this data set.

Method 8270C: Naphthalene, 1-methylnaphthalene, and 2-methylnaphthalene may be reported by either EPA Method 8270 or EPA Method 8270 SIM, depending which method needs the least dilution. In this report naphthalene, 1-methylnaphthalene, and 2-methylnaphthalene were reported by EPA Method 8270 instead of EPA Method 8270 SIM for sample MKTF-18R. Naphthalene and 2-methylnaphthalene were reported by EPA Method 8270 instead of EPA Method 8270 SIM for sample MKTF-35.

Method 4500CN E: For samples MKTF-18R, MKTF-38, and MKTF-16, analyses were performed from improper containers.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

J – Analyte detected below quantitation limits.

P – Sample pH not in range.

P1 – RPD value not applicable for sample concentrations less than 5 times the reporting limit.

R – RPD value outside of range.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. The laboratory noted that the shipping containers were sealed, and custody seals were present and intact on the shipping containers.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| Method | Sample(s) | Analyte(s) | Dilution Factor |
|--------|----------------------------|-----------------------------------|-----------------|
| 200.7 | Multiple Samples | Total and/or Dissolved Barium | 2 |
| 200.8 | MKTF-35, MKTF-11, MKTF-16 | Select Total and Dissolved Metals | 5 |
| 8015D | MKTF-18R, MKTF-35, MKTF-11 | TPH GRO | 10 |
| 8260B | MKTF-18R, MKTF-11 | Select VOCs | 10 |
| 8260B | MKTF-35 | VOCs | 20 |
| 8260B | MKTF-18R, MKTF-11 | Benzene | 100 |
| 200.7 | MKTF-35 | Total Barium | 100 |
| 8260B | MKTF-35 | Benzene and Toluene | 200 |

| VALIDATION CRITERIA CHECKLIST | |
|--|-----|
| 5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? | No |
| <p>Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.</p> <p>The CoC requested total and dissolved metals using Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> <p>The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> | |
| 6. Were samples received in good condition within method-specified requirements? | No |
| <p>Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ between 0.4°C and 5.3°C as noted on the CoC and the <i>Sample Log-in Check List</i>. Samples transferred to Pace National were received in good condition with the cooler temperature outside the recommended range at 1.1°C as noted on the CoC. The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen.</p> <p>A preserved vial was submitted for the Method 8015D GRO analysis for sample MKTF-18R but the pH at the time of analysis was greater than two. Following EPA defined actions, the holding time for this sample was reduced from 14 days to 7 days from sampling to analysis.</p> | |
| 7. Were samples extracted/digested and analyzed within method-specified or technical holding times? | Yes |
| Comments: The samples were extracted/digested and analyzed within method-specific and reduced holding times. | |
| 8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. | Yes |
| Comments: The results were reported in concentration units of micrograms per liter ($\mu\text{g/L}$) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested. | |
| 9. Did the laboratory provide any specific initial and/or continuing calibration results? | No |
| Comments: Initial and continuing calibration data were not included as part of this data set. | |
| 10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? | N/A |
| Comments: Initial and continuing calibration data were not included as part of this data set. | |
| 11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | Yes |
| Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples. | |
| 12. Were target analytes reported as not detected in the laboratory blanks? | No |
| <p>Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exception.</p> <p>TPH DRO was detected in the laboratory blank for Method 8015D batch 68348 at a concentration of 0.021 mg/L. TPH DRO was detected in sample EB-6-21-22 at a concentration less than the laboratory reporting limit and the result was qualified with a U flag. The TPH DRO results for sample DUP-6-21-22 and sample MKTF-46 that were greater than the blank detection and the laboratory reporting limit but less than 10 times the blank concentration were qualified with JB flags. Detections of this analyte in the associated samples greater than ten times the blank concentration did not require qualification.</p> | |

VALIDATION CRITERIA CHECKLIST

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>MS Sample Source</u> |
|---------------------|-----------------------------|--------------|-------------------------|
| 200.7 | Total Metals | 68353 | Not Prepared |
| 200.7 | Dissolved Metals | A88979 | Not Prepared |
| 200.7 | Dissolved Metals | B88979 | DUP-6-21-22 |
| 200.8 | Total Metals | 68353 | Not Prepared |
| 200.8 | Dissolved Metals | A88981 | Not Prepared |
| 245.1 | Total and Dissolved Mercury | 68333 | Not Prepared |
| 504.1 | EDB | 68319 | Not Prepared |
| 4500CN E | Cyanide | WG1886404 | MKTF-35 |
| 8015D | TPH DRO and MRO | 68348 | Not Prepared |
| 8015D | TPH GRO | A89029 | Not Prepared |
| 8260B | Benzene | A89138 | Not Prepared |
| 8260B | VOCs | R89107 | Not Prepared |
| 8260B | VOCs | W89041 | MKTF-46 |
| 8270C and 8270C SIM | SVOCs | 68332 | Not Prepared |

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The percent recoveries and RPDs for MS/MSDs prepared from project samples were within data validation and laboratory QC limits.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

VALIDATION CRITERIA CHECKLIST

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits?

No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits | LCS/LCSD RPD | RPD QC Limits |
|-----------|----------------|-------|--------------|---------------|--------------------|--------------|---------------|
| 200.7 | Total Nickel | 68353 | 53.6% | ----- | 70-130% | ----- | ----- |
| 200.8 | Total Selenium | 68353 | 131% | ----- | 70-130% | ----- | ----- |
| 504.1 | EDB | 68319 | Acceptable | Acceptable | 70-130% | 21.9% | 20% |
| 8015D | TPH DRO | 68348 | 81.2% | 89.2% | 31.7-75.4% | Acceptable | 20% |
| 8270C SIM | 1,4-Dioxane | 68332 | 53.0% | 55.0% | 20.2-48.4% | Acceptable | 30.1% |
| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits | LCS/LCSD RPD | RPD QC Limits |
| 8270C SIM | Acenaphthene | 68332 | Acceptable | 83.0% | 29.8-82.7% | Acceptable | 27.8% |
| 8270C SIM | Phenanthrene | 68332 | Acceptable | 94.0% | 38.2-93.9% | Acceptable | 27.9% |

Total nickel results were qualified as J- if detected and UJ if not detected in the associated samples due to evidence of potential low bias.

Analytes with LCS and/or LCSD recoveries greater than the laboratory or data validation QC limits were detected in associated samples and the results were qualified as J+ to indicate estimated concentrations that may be biased high. Non-detections of these analytes in the associated samples did not require qualification.

EDB was not detected in the associated samples and the results were qualified UJ due to evidence of poor precision.

17. Were surrogate recoveries within laboratory QC limits?

No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

Since Method 8270C and Method 8270C SIM surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the samples MKTF-46 and MKTF-35 Method 8270C analyses.

The Method 8015D surrogate BFB was recovered in sample MKTF-35 outside the acceptance limits of 70-130% at 151%. The target analyte, TPH GRO, associated with this surrogate was detected in sample MKTF-35, and the result was assigned a J+ qualifier due to evidence of potential high bias.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit?

Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB-6-21-22, and one equipment blank sample, EB 6-21-22, were collected as part of this sample set.

VALIDATION CRITERIA CHECKLIST

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration</u> |
|------------------------|---------------|-----------------------|----------------------|
| FB-6-21-22 | 8260B | Acetone | 3.6 µg/L |
| EB-6-21-22 | 8260B | Acetone | 3.2 µg/L |
| EB-6-21-22 | 8260B | Methylene Chloride | 0.80 µg/L |
| EB-6-21-22 | 8015D | TPH DRO | 0.041 mg/L |
| EB-6-21-22 | 200.7 | Dissolved Zinc | 0.0075 mg/L |

Detections of acetone and dissolved zinc in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of dissolved zinc in the associated samples that were greater than the reporting limits but less than 10 times the blank result were assigned JB qualifiers. Non-detections of these analytes in the associated samples did not require qualification.

The TPH DRO results in batch 68348 were previously qualified due to laboratory blank contamination; therefore, additional qualification due to the equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples. Sample DUP-6-21-22 was collected as a field duplicate of sample MKTF-46.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exception.

The RPD value for TPH DRO exceeded the data validation limit of 30% at 96.3%, which was evidence of poor precision. The TPH DRO results were qualified as J for samples MKTF-46 and DUP-6-21-22.

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? N/A

Comments: Laboratory duplicates were prepared for the analysis of cyanide in batch WG1886404 from samples not associated with this data set.

The RPD values for the laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

VALIDATION CRITERIA CHECKLIST

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? N/A

Comments: Target analytes were not reported by more than one method in this data set.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results. The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |

| Lead, Total | E200.8 | 0.0014 mg/L | 0.0014 mg/L | 0.0% |
| Selenium, Total | E200.8 | 0.00045 mg/L | 0.00051 mg/L | 12.5% +/-RL |
| Mercury, Total | E245.1 | 0.00013 mg/L | 0.00013 mg/L | 0.0% +/-RL |
| <p>Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.</p> <p>DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).</p> <p>+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.</p> <p>The RPD value for TPH DRO exceeded the data validation limit of 30% at 96.3%, which was evidence of poor precision. The TPH DRO results were qualified as J for samples MKTF-46 and DUP-6-21-22.</p> | | | | |

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| MBD | Method blank detection |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-LCS | The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| ERPD-LCS | The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision. |
| HR-SUR | The surrogate percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| EBD | Equipment blank detection |
| FBD | Field blank detection |
| ERPD-FD | High field duplicate RPD. |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |

| Reviewer: Mike Phillips, Senior Chemist | |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-6-22-22 | 2206C26-001 |
| MKTF-40 | 2206C26-002 |
| MKTF-31 | 2206C26-003 |
| FB-6-22-22 | 2206C26-004 |
| DUP-6-22-22 | 2206c26-005 |
| Trip Blank | 2206c26-006 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ⊗ Laboratory Qualifiers (Item 2)
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ✓ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| J- | The result is an estimated concentration, but may be biased low |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 270 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? Yes

Comments: The laboratory did not report non-conformances related to the analytical data for this sample set.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

E – Estimated value. **The target analyte 1,4-dioxane was flagged by the laboratory with the E flag for sample MKTF-31. This result was assigned a J qualifier to indicate an estimated concentration.**

J – Analyte detected below quantitation limits

J3 – The associated batch QC was outside the established quality control range for precision.

J6 – The sample matrix interfered with the ability to make any accurate determination; spike value is low.

P1 – RPD value not applicable for sample concentrations less than 5 times the reporting limit.

R – % RPD is outside of range.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. The laboratory noted that the shipping containers were sealed, and custody seals were present and intact on the shipping containers.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| Method | Sample(s) | Analyte(s) | Dilution Factor |
|--------|----------------------|----------------------------|-----------------|
| 8260B | MKTF-31 | VOCs | 2 |
| 200.8 | MKTF-40, DUP-6-22-22 | Dissolved and Total Metals | 5 |
| 8260B | MKTF-31 | MTBE | 10 |

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? No

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.

The CoC requested total and dissolved metals using only Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

VALIDATION CRITERIA CHECKLIST

6. Were samples received in good condition within method-specified requirements?

No

Comments: Samples were received on ice, in good condition, and with the cooler temperatures outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ at 0.9°C and 1.1°C as noted on the CoC and the *Sample Log-in Check List*. Samples transferred to Pace National were received in good condition with the cooler temperature outside the recommended range at 0.5°C as noted on the CoC.

The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen.

7. Were samples extracted/digested and analyzed within method-specified or technical holding times?

Yes

Comments: The samples were extracted/digested and analyzed within method-specific holding times.

8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil.

Yes

Comments: The results were reported in concentration units of micrograms per liter ($\mu\text{g/L}$) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.

9. Did the laboratory provide any specific initial and/or continuing calibration results?

No

Comments: Initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits?

N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method?

Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

12. Were target analytes reported as not detected in the laboratory blanks?

No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exception.

TPH DRO was detected in the laboratory blank for Method 8015D batch 68348 at a concentration of 0.021 mg/L. TPH DRO results in the associated samples (EB-6-22-22 and MKTF-40) that were less than the laboratory reporting limit were assigned U qualifiers. The TPH DRO result for sample MKTF-31 that was greater than the laboratory reporting limit but less than or equal to 10 times the blank concentration was assigned a JB qualifier. The TPH DRO result in the associated sample DUP-6-22-22 was greater than ten times the blank concentration and did not require qualification.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method?

Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| Method | Analytes | Batch | MS Sample Source |
|--------|------------------|--------|------------------|
| 200.7 | Total Metals | 68353 | DUP-6-22-22 |
| 200.7 | Dissolved Metals | B88979 | Not Prepared |
| 200.8 | Total Metals | 68353 | Not Prepared |
| 200.8 | Dissolved Metals | B89062 | Not Prepared |
| 200.8 | Dissolved Metals | C89140 | Not Prepared |

VALIDATION CRITERIA CHECKLIST

| Method | Analytes | Batch | MS Sample Source |
|-----------|-----------------------------|-----------|------------------|
| 245.1 | Total and Dissolved Mercury | 68334 | EB-6-22-22 |
| 504.1 | EDB | 68319 | DUP-6-22-22 |
| 4500CN E | Cyanide | WG1888356 | Not Associated |
| 4500CN E | Cyanide | WG1888360 | Not Associated |
| 8015D | TPH DRO and MRO | 68348 | Not Prepared |
| 8015D | GRO | A89029 | Not Prepared |
| 8260B | VOC | A89211 | Not Prepared |
| 8260B | VOC | R89156 | MKTF-40 |
| 8270C SIM | SVOC | 68332 | Not Prepared |
| 8270C | SVOC | 68332 | Not Prepared |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The MS/MSD percent recoveries and RPDs for project samples were within data validation and laboratory QC limits.

The percent recoveries and RPD values for MS/MSDs prepared from non-project samples were evaluated and considered, but data were not qualified based on those results since matrix similarity to project samples could not be guaranteed.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits | LCS/LCSD RPD | RPD QC Limits |
|-----------|----------------|-------|--------------|---------------|--------------------|--------------|---------------|
| 200.7 | Total Nickel | 68353 | 53.6% | ----- | 70-130% | ----- | ----- |
| 200.8 | Total Selenium | 68353 | 131% | ----- | 70-130% | ----- | ----- |
| 8011 | EDB | 68319 | Acceptable | Acceptable | 70-130% | 21.9% | 20% |
| 8015D | TPH DRO | 68348 | 81.2% | 89.2% | 31.7-75.4% | Acceptable | 20% |
| 8270C SIM | 1,4-Dioxane | 68332 | 53.0% | 55.0% | 20.2-48.4% | Acceptable | 30.1% |
| 8270C SIM | Acenaphthene | 68332 | Acceptable | 83.0% | 29.8-82.7% | Acceptable | 27.8% |
| 8270C SIM | Phenanthrene | 68332 | Acceptable | 94.0% | 38.2-93.9% | Acceptable | 27.9% |

Detections of total nickel in the associated samples were qualified as J- and non-detected total nickel results were qualified as UJ due to evidence of low bias.

Detections of the identified analytes in the associated samples with LCS and/or LCSD percent recoveries that were greater than the upper laboratory QC limits were qualified as J+ due to evidence of potential high bias. Non-detection of these analytes in the associated samples did not require qualification.

EDB was not detected in the associated samples, and the results were assigned UJ qualifiers due to evidence of poor precision.

VALIDATION CRITERIA CHECKLIST

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

Since Method 8270C surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the sample EB-6-22-22, and qualification of sample data was not required.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB-6-22-22, and one equipment blank sample, EB-6-22-22, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration</u> |
|------------------------|---------------|--------------------|----------------------|
| FB-6-22-22 | 8260B | Acetone | 5.7 µg/L |
| EB-6-22-22 | 200.7 | Dissolved Vanadium | 0.0021 mg/L |
| EB-6-22-22 | 200.7 | Dissolved Zinc | 0.0066 mg/L |
| EB-6-22-22 | 8015 | TPH DRO | 0.023 mg/L |
| EB-6-22-22 | 8260B | Acetone | 5.30 µg/L |

Detections of acetone, dissolved vanadium, and dissolved zinc in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. The detections of dissolved zinc in the associated samples DUP-6-22-22 and MKTF-40 that were greater than the reporting limit but less than 10 times the blank result were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples did not require qualification.

The TPH DRO results for the samples in batch 68348 were previously qualified due to a laboratory blank detection; therefore, additional qualification due to the equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples.

Sample DUP-6-22-22 was collected as a field duplicate of sample MKTF-40.

VALIDATION CRITERIA CHECKLIST

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exceptions.

The RPD value for TPH DRO greatly exceeded the data validation limit of 30% at 163.6%. The reported results for TPH DRO were assigned J qualifiers for the parent and field duplicate samples, and J qualifiers for the results for TPH DRO in the associated samples due to evidence of extremely poor precision (RPD > 100%).

An RPD value could not be calculated for TPH ORO for the field duplicate pair MKTF-40 and DUP-6-22-22 since the analyte was detected in the duplicate sample and was undetected in the parent sample. As the detection in the duplicate sample was greater than two times the reporting limit, TPH ORO was qualified as J and UJ for the duplicate and parent samples, respectively.

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? N/A

Comments: Laboratory duplicates were prepared for these analyses, and the laboratory duplicate sample sources are summarized in the following table.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>Laboratory Duplicate Sample Source</u> |
|---------------|-----------------|--------------|---|
| 4500CN E | Cyanide | WG1888356 | Not Associated |
| 4500CN E | Cyanide | WG1888360 | Not Associated |

Not Associated – The duplicate sample source was not associated with this project.

The RPD values for laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

VALIDATION CRITERIA CHECKLIST

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? N/A

Comments: Target analytes were not reported by more than one method in this data set.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results. The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
|------------------|----------------|----------------------------|--------------------------------|
| MKTF-40 | Nickel | 0.0093 | 0.013 |
| DUP-6-22-22 | Nickel | 0.010 | 0.011 |
| MKTF-40 | Silver | ND | 0.0056 |
| MKTF-31 | Silver | ND | 0.0016 |
| DUP-6-22-22 | Silver | ND | 0.0060 |
| EB-6-22-22 | Vanadium | ND | 0.0021 |
| EB-6-22-22 | Zinc | ND | 0.0066 |

FIELD DUPLICATE SUMMARY

| Client Sample ID: MKTF-40
Field Duplicate Sample ID: DUP-6-22-22 | | | | |
|---|---------------|------------------------|------------------|-----------------------------------|
| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
| Barium, Dissolved | E 200.7 | 0.047 mg/L | 0.050 mg/L | 6.2% |
| Barium, Total | E 200.7 | 0.29 mg/L | 0.26 mg/L | 10.9% |
| Chromium, Total | E 200.7 | 0.0048 mg/L | 0.0032 mg/L | 40.0% +/-RL |

Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

The RPD value for TPH DRO greatly exceeded the data validation limit of 30% at 163.6%. The reported results for TPH DRO were assigned J qualifiers for the parent and field duplicate samples, and J qualifiers for the results for TPH DRO in the associated samples due to evidence of extremely poor precision (RPD > 100%).

An RPD value could not be calculated for TPH ORO for the field duplicate pair MKTF-40 and DUP-6-22-22 since the analyte was detected in the duplicate sample and was undetected in the parent sample. As the detection in the duplicate sample was greater than two times the reporting limit, TPH ORO was qualified as J and UJ for the duplicate and parent samples, respectively.

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| EBD | Equipment blank detection |
| ECAL | The result exceeds the calibration range. |
| ERPD-FD | High field duplicate RPD. |
| ERPD-LCS | The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision. |
| FBD | Field blank detection |
| MBD | Method blank detection |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-LCS | The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blank
- Field blank
- Equipment blank

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-6-24-22 | 2206E09-001 |
| MKTF-27 | 2206E09-002 |
| MKTF-28 | 2206E09-003 |
| NAPIS-2 | 2206E09-004 |
| NAPIS-3 | 2206E09-005 |
| KA-3 | 2206E09-006 |
| STP-1 to EP-2 | 2206E09-007 |
| EP-2 | 2206E09-008 |
| EP-6 | 2206E09-009 |
| FB-6-24-22 | 2206E09-010 |
| DUP-6-24-22 | 2206E09-011 |
| Trip Blank | 2206E09-012 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicate (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| J- | The result is an estimated concentration, but may be biased low |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |
| R | Rejected, data not usable |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 819 data points. The data completeness calculation does not include any submitted blank sample results. One data point was rejected. The data completeness measure for this data package is calculated to be 99.88% and is acceptable.

| VALIDATION CRITERIA CHECKLIST | |
|--|-----|
| 1. Was the report free of non-conformances identified by the laboratory? | Yes |
| Comments: The laboratory did not identify non-conformances regarding the analytical data. | |
| 2. Were the data free of data qualification flags and/or notes used by the laboratory?
If no, define. | No |
| Comments: The laboratory used the following data qualification flags with this data set.
D – Sample diluted due to matrix
J – Analyte detected below quantitation limits
J6 – The sample matrix interfered with the ability to make any accurate determination; spike value is low.
P1 – RPD value not applicable for sample concentrations less than 5 times the RL.
R – RPD outside of range
S – % Recovery outside of range due to dilution or matrix interference.
* – Value exceeds maximum contaminant level. | |
| 3. Were sample CoC forms and custody procedures complete? | Yes |
| Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by courier, and custody was maintained at all times. | |
| 4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? | Yes |
| Comments: The detection limits appeared to be acceptable. The following dilutions were applied.
<u>Method 8260B</u> : Dilutions of 2 to 20 times were applied for the VOC analyses of select samples.
<u>Methods 8270C/8270 SIM</u> : Dilutions of 10 times were applied for the SVOC analyses of samples STP-1 to EP-2, EP-2, and EP-6.
<u>Method 200.7</u> : Dilutions of 5 and 10 times were applied for the total and dissolved metals analysis of samples NAPIS-2, NAPIS-3, and EP-6.
<u>Method 200.8</u> : Dilutions of 5 to 100 times were applied for the metals analyses of select samples.
<u>Method 245.1</u> : A dilution of 5 times was applied for the mercury analysis of sample KA-3.
<u>Method 410.4</u> : A dilution of 5 times was applied for the COD analysis of sample EP-6.
<u>SM 9223B</u> : Dilutions of 10 times were applied for the E. coli analysis of samples NAPIS-2, NAPIS-3, and EP-6. | |
| 5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? | Yes |
| Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC. | |
| 6. Were samples received in good condition within method-specified requirements? | No |
| Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of 4°C ± 2°C between 0.8°C and 5.3°C as noted on the <i>Sample Log-In Check List</i> and CoC. The cooler temperatures below 2°C were judged as acceptable since the samples were not reported to be frozen upon receipt at the laboratory, and the sample containers were reported to be intact. | |
| 7. Were samples extracted/digested and analyzed within method-specified or technical holding times? | Yes |
| Comments: The samples were extracted/digested and analyzed within method-specific holding times. | |

VALIDATION CRITERIA CHECKLIST

8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. Yes

Comments: The results were reported in concentration units of micrograms per liter (µg/L), milligrams per liter (mg/L), and most probable number per 100 milliliters (MPN/100 mL), which were acceptable for the sample matrix and the analyses requested.

9. Did the laboratory provide any specific initial and/or continuing calibration results? No

Comments: Initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

12. Were target analytes reported as not detected in the laboratory blanks? No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

Method 8015D Modified: **The analyte TPH DRO was detected in the method blank from batch 68464 at 0.037 mg/L. TPH DRO was detected in samples EB-6-24-22, EP-2, and STP-1 to EP-2 at concentrations less than the blank detection and the results were qualified as U. TPH DRO was detected in samples DUP-6-24-22, MKTF-27, and MKTF-28 at concentrations greater than the blank detection but less than or equal to 10 times the blank concentration and the results were qualified as JB.** TPH DRO results in the associated samples that were greater than 10 times the blank detection did not require qualification.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batch. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| Method | Analytes | Batch | MS Sample Source |
|--------|------------------|--------|------------------|
| 200.7 | Total Metals | 68406 | Not Prepared |
| 200.7 | Dissolved Metals | B89068 | Not Prepared |
| 200.7 | Dissolved Metals | A89154 | Not Prepared |

VALIDATION CRITERIA CHECKLIST

| Method | Analytes | Batch | MS Sample Source |
|-----------|----------|-----------|----------------------------|
| 8270 SIM | SVOC | 68408 | Not Prepared |
| 8270 SIM | SVOC | 68468 | Not Prepared |
| 5210B | BOD | 68337 | Not Prepared |
| 9223B | E. Coli | 68346 | Not Prepared |
| 4500 CN E | Cyanide | WG1888930 | Not Associated |
| 4500 CN E | Cyanide | WG1889365 | Not Associated and MKTF-28 |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The MS/MSD percent recoveries and RPDs for project samples were within data validation and laboratory QC limits.

Recoveries and RPDs for MS/MSDs prepared from non-project samples were considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the exceptions listed in the following table.

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits | LCS/LCSD RPD | RPD QC Limits |
|-----------------|----------------------------|--------------|--------------|---------------|--------------------|--------------|---------------|
| 200.7 | Nickel, Total | 68406 | 136% | ----- | 70-130% | ----- | ----- |
| 8015D | TPH DRO | 68464 | 83.6% | Acceptable | 31.7-75.4% | Acceptable | 20% |
| 8270C | Pyrene | 68408 | Acceptable | Acceptable | 61-123% | 12.3% | 11.8% |
| 8270C | Acenaphthene | 68468 | Acceptable | Acceptable | 21.3-104% | 58.7% | 45.3% |
| 8270C | 1,4-Dichlorobenzene | 68468 | Acceptable | Acceptable | 15-89.8% | 55.4% | 39.6% |
| 8270C | Phenol | 68468 | Acceptable | Acceptable | 17-61.1% | 59.2% | 42.5% |
| 8270C | Pyrene | 68468 | Acceptable | Acceptable | 61-123% | 19.2% | 11.8% |
| 8270 SIM | 1,4-Dioxane | 68408 | 53.0% | Acceptable | 20.2-48.4% | Acceptable | 30.1% |
| 8270 SIM | Naphthalene | 68408 | 80.0% | Acceptable | 21.3-79.9% | Acceptable | 25.6% |
| 8270 SIM | Acenaphthene | 68408 | 84.0% | Acceptable | 29.8-82.7% | Acceptable | 27.8% |

Analytes with LCS recoveries greater than laboratory QC limits were detected in the associated samples and the results were qualified as J+ to indicate estimated concentrations that may be biased high. Non-detections did not require qualification based on the evidence of potential high bias.

Results for 1,4-dichlorobenzene and phenol were qualified as J if detected in the associated samples and UJ if not detected due to evidence of poor precision.

Qualification was not required for acenaphthene and pyrene by Method 8270C as the associated samples' results were reported from Method 8270 SIM and the non-compliant LCS results did not apply to those analyses.

VALIDATION CRITERIA CHECKLIST

17. Were surrogate recoveries within laboratory QC limits?

No

Comments: Surrogate recoveries were within laboratory QC limits, with the exceptions listed in the following table.

| Method | Surrogate | Sample | Surrogate Recovery | QC Limits |
|----------|-----------------------------|---------------|--------------------|------------|
| 8015D | Bromofluorobenzene | NAPIS-2 | 354% | 70-130% |
| 8015D | Bromofluorobenzene | NAPIS-3 | 198% | 70-130% |
| 8015D | Bromofluorobenzene | KA-3 | 161% | 70-130% |
| 8015D | Di-n-octylphthalate | STP-1 to EP-2 | 25.5% | 42.2-138% |
| 8270C | 2-Fluorophenol | STP-1 to EP-2 | 0% | 29.4-87.7% |
| 8270C | Phenol-d ₅ | STP-1 to EP-2 | 0% | 28.5-64.7% |
| 8270C | 2,4,6-Tribromophenol | STP-1 to EP-2 | 0% | 18.6-129% |
| 8270C | Nitrobenzene-d ₅ | STP-1 to EP-2 | 0% | 36.9-103% |
| 8270C | 2-Fluorobiphenyl | STP-1 to EP-2 | 0% | 38.1-99.9% |
| 8270C | 4-Terphenyl-d ₁₄ | STP-1 to EP-2 | 0% | 48-155% |
| 8270 SIM | Nitrobenzene-d ₅ | STP-1 to EP-2 | 0% | 31.6-100% |
| 8270 SIM | 2-Fluorobiphenyl | STP-1 to EP-2 | 0% | 26.7-90.1% |
| 8270 SIM | 4-Terphenyl-d ₁₄ | STP-1 to EP-2 | 0% | 72.3-147% |
| 8015D | Di-n-octylphthalate | EP-2 | 6.11% | 42.2-138% |
| 8270C | 2-Fluorophenol | EP-2 | 0% | 29.4-87.7% |
| 8270C | Phenol-d ₅ | EP-2 | 0% | 28.5-64.7% |
| 8270C | 2,4,6-Tribromophenol | EP-2 | 0% | 18.6-129% |
| 8270C | Nitrobenzene-d ₅ | EP-2 | 0% | 36.9-103% |
| 8270C | 2-Fluorobiphenyl | EP-2 | 0% | 38.1-99.9% |
| 8270C | 4-Terphenyl-d ₁₄ | EP-2 | 0% | 48-155% |
| 8270 SIM | Nitrobenzene-d ₅ | EP-2 | 0% | 31.6-100% |
| 8270 SIM | 2-Fluorobiphenyl | EP-2 | 0% | 26.7-90.1% |
| 8270 SIM | 4-Terphenyl-d ₁₄ | EP-2 | 0% | 72.3-147% |
| 8270C | 2-Fluorophenol | EP-6 | 0% | 29.4-87.7% |
| 8270C | Phenol-d ₅ | EP-6 | 0% | 28.5-64.7% |
| 8270C | 2,4,6-Tribromophenol | EP-6 | 0% | 18.6-129% |
| 8270C | Nitrobenzene-d ₅ | EP-6 | 0% | 36.9-103% |
| 8270C | 2-Fluorobiphenyl | EP-6 | 0% | 38.1-99.9% |
| 8270C | 4-Terphenyl-d ₁₄ | EP-6 | 0% | 48-155% |
| 8270 SIM | Nitrobenzene-d ₅ | EP-6 | 0% | 31.6-100% |
| 8270 SIM | 2-Fluorobiphenyl | EP-6 | 0% | 26.7-90.1% |

The analyte associated with bromofluorobenzene (TPH GRO) was detected in the affected samples and was qualified as J+ to indicate estimated concentrations that may be biased high.

The analytes associated with Method 8015 D surrogate di-n-octylphthalate were qualified as J- if detected and UJ if not detected in the affected samples. As the surrogate recovery in sample EP-2 was less than 10%, the non-detect result for TPH ORO was qualified as R to indicate a rejected datum.

Qualification was not required for samples STP-1 to EP-2, EP-2, and EP-6 as the listed surrogates were diluted out.

Qualification was not required based on surrogate nonconformance in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

VALIDATION CRITERIA CHECKLIST

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB-6-24-22, and one equipment blank sample, EB-6-24-22, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples, with the exceptions listed in the following table.

| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration</u> |
|------------------------|---------------|-----------------------|----------------------|
| FB-6-24-22 | 8260B | Acetone | 7.4 µg/L |
| FB-6-24-22 | 8260B | Toluene | 0.22 µg/L |
| FB-6-24-22 | 8260B | Xylenes, Total | 0.64 µg/L |
| EB-6-24-22 | 8260B | Acetone | 4.9 µg/L |
| EB-6-24-22 | 8260B | Chloromethane | 0.6 µg/L |
| EB-6-24-22 | 8260B | Toluene | 0.23 µg/L |
| EB-6-24-22 | 8260B | Xylenes, Total | 0.64 µg/L |
| EB-6-24-22 | 8015D | TPH GRO | 0.019 mg/L |
| EB-6-24-22 | 8015D | TPH DRO | 0.031 mg/L |
| EB-6-24-22 | 200.7 | Total Zinc | 0.0046 mg/L |
| EB-6-24-22 | 200.7 | Dissolved Zinc | 0.0053 mg/L |

Detections in the associated samples that were less than the applicable reporting limits were assigned U qualifiers. Detections in the associated samples that were greater than the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

The TPH DRO results were previously qualified due to laboratory blank contamination in batch 68464; therefore, additional qualification due to the equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples. Sample DUP-6-24-22 was collected as a field duplicate of sample MKTF-27.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exception.

The RPD value for total barium exceeded the data validation QC limit of 30% at 33.3%, which was evidence of poor precision. The total barium results were qualified as J for samples MKTF-27 and DUP-6-24-22.

VALIDATION CRITERIA CHECKLIST

22. For laboratory duplicates prepared from project samples, were RPDs within data validation or laboratory QC limits? Yes

Comments: Laboratory duplicates prepared for these analyses and laboratory duplicate sample sources are summarized in the following table.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>Laboratory Duplicate Sample Source</u> |
|---------------|-----------------|--------------|---|
| 410.4 | COD | WG1891521 | STP-1 to EP-2 and Not Associated |
| 4500 CN E | Cyanide | WG1888930 | Not Associated and EB-6-24-22 |
| 4500CN E | Cyanide | WG1889365 | Not Associated |

Not Associated – The laboratory duplicate sample source was not associated with this project.

Laboratory duplicate RPDs were within data validation and laboratory QC limits.

The RPD values for laboratory duplicate samples prepared from non-project samples were considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? N/A

Comments: Target analytes were not reported by more than one method.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results. The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
|------------------|----------------|----------------------------|--------------------------------|
| STP-1 to EP-2 | Antimony | 0.00056 | 0.0012 |

| Lead, Total | 200.8 | 0.0025 mg/L | 0.0019 mg/L | 27.3% +/-RL |
| Selenium, Dissolved | 200.8 | 0.0018 mg/L | ND (0.005 mg/L) | DL |
| Selenium, Total | 200.8 | ND (0.005 mg/L) | 0.0020 mg/L | DL |
| Cyanide, Total | 4500 CN E | 16.3 µg/L | 14.7 µg/L | 10.3% |

Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

The RPD value for total barium exceeded the data validation QC limit and was qualified as J for samples MKTF-27 and DUP-6-24-22 due to evidence of poor precision.

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| MBD | Method blank detection |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| ERPD-LCS | The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision. |
| HR-SUR | The surrogate percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-SUR | The surrogate percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| FBD | Field blank detection |
| EBD | Equipment blank detection |
| ERPD-FD | High field duplicate RPD. |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |

Tier II Data Validation Report Summary

| | |
|--|--|
| Client: Marathon Oil | Laboratory: Hall Environmental Analysis Laboratory |
| Project Name: Western Refining Southwest, Q2 GW Sampling | Sample Matrix: Groundwater |
| Project Number: 697-080-002 Task 0006 | Sample Start Date: 06/28/2022 |
| Date Validated: 10/03/2022 | Sample End Date: 06/28/2022 |
| Parameters Included: <ul style="list-style-type: none"> ▪ Volatile Organic Compounds (VOC) by Environmental Protection Agency (EPA) Test Methods for Evaluating Solid Waste (SW-846) Method 8260B ▪ 1,2-Dibromoethane (EDB) by EPA Method 504.1 ▪ Semivolatile Organic Compounds (SVOC) by SW-846 Method 8270C and Method 8270 with Selected Ion Monitoring (SIM) ▪ Total Petroleum Hydrocarbons (TPH) Gasoline Range Organics (GRO) by SW-846 Method 8015D ▪ TPH Diesel Range Organics (DRO) and Motor Oil Range Organics (MRO) by SW-846 Method 8015D Modified ▪ Total and Dissolved Metals by EPA Method 200.7 and Method 200.8 ▪ Total and Dissolved Mercury by EPA Method 245.1 ▪ Cyanide by Standard Methods for the Examination of Water and Wastewater (SM) Method 4500 CN E | |
| Laboratory Project ID: 2206F41 | |
| Data Validator: Kyle Power, Environmental Chemist | |
| Reviewer: Mike Phillips, Senior Chemist | |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blank
- Field blank
- Equipment blank

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-6-28-22 | 2206F41-001 |
| MKTF-30 | 2206F41-002 |
| MKTF-29 | 2206F41-003 |
| OPIS-1 | 2206F41-004 |
| STP-1-NM | 2206F41-005 |
| OW-12A | 2206F41-006 |
| OW-70 | 2206F41-007 |
| DUP-6-28-22 | 2206F41-008 |
| FB-6-28-22 | 2206F41-009 |
| Trip Blank | 2206F41-010 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicate (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 630 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

| VALIDATION CRITERIA CHECKLIST | |
|--|-----|
| 1. Was the report free of non-conformances identified by the laboratory? | No |
| <p>Comments: The laboratory noted the following non-conformances regarding the analytical data.</p> <p><u>Method 8270C</u>: The recovery for pyrene in the LCSD was slightly low.</p> <p>"S" flagged surrogates denote low surrogate recoveries due to matrix interferences/sample dilution.</p> | |
| 2. Were the data free of data qualification flags and/or notes used by the laboratory?
If no, define. | No |
| <p>Comments: The laboratory used the following data qualification flags with this data set.</p> <p>D – Sample diluted due to matrix</p> <p>J – Analyte detected below quantitation limits</p> <p>J3 – The associated batch QC was outside the established quality control range for precision.</p> <p>J6 – The sample matrix interfered with the ability to make any accurate determination; spike value is low.</p> <p>P1 – RPD value not applicable for sample concentrations less than 5 times the RL.</p> <p>R – RPD outside of range</p> <p>S – % Recovery outside of range due to dilution or matrix interference.</p> <p>* – Value exceeds maximum contaminant level.</p> | |
| 3. Were sample CoC forms and custody procedures complete? | Yes |
| <p>Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by courier, and custody was maintained at all times.</p> | |
| 4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? | Yes |
| <p>Comments: The detection limits appeared to be acceptable. The following dilutions were applied.</p> <p><u>Method 8260B</u>: Dilutions of 2 to 20 times were applied for the VOC analyses of select samples.</p> <p><u>Methods 8270C/8270 SIM</u>: A dilution of 10 times was applied for the SVOC analysis of sample OPIS-1.</p> <p><u>Method 8015D</u>: A dilution of 2 times was applied for the TPH GRO analysis of sample OPIS-1.</p> <p><u>Method 8015D Modified</u>: A dilution of 2 times was applied for the TPH DRO and TPH MRO analyses of sample OPIS-1.</p> <p><u>Method 200.7</u>: Dilutions of 5 times were applied for the total barium analyses of samples OPIS-1 and OW-12A.</p> <p><u>Method 200.8</u>: A dilution of 5 times was applied for the dissolved metals analysis of sample OPIS-1.</p> | |
| 5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? | No |
| <p>Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.</p> <p>The CoC requested total and dissolved metals using Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> <p>The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> | |

| VALIDATION CRITERIA CHECKLIST | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
|---|------------------|--------|------------------|-------|------------------|-------|--------------|-------|--------------|-------|------------------|--------|--------------|-------|--------------|-------|--------------|-------|------------------|--------|------------|-------|---------------|-------|--------|-------|-----|-------|--------------|
| 6. Were samples received in good condition within method-specified requirements? | Yes | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Comments: Samples were received on ice, in good condition, and with the cooler temperatures within the recommended temperature range of 4°C ± 2°C between 2.1°C and 5.2°C as noted on the <i>Sample Log-In Check List</i> and CoC. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 7. Were samples extracted/digested and analyzed within method-specified or technical holding times? | Yes | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Comments: The samples were extracted/digested and analyzed within method-specific holding times. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. | Yes | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Comments: The results were reported in concentration units of micrograms per liter (µg/L) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 9. Did the laboratory provide any specific initial and/or continuing calibration results? | No | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Comments: Initial and continuing calibration data were not included as part of this data set. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? | N/A | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Comments: Initial and continuing calibration data were not included as part of this data set. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | Yes | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 12. Were target analytes reported as not detected in the laboratory blanks? | No | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| <p>Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.</p> <p>Method 8015D Modified: The analyte TPH DRO was detected in the method blanks from batches 68495 and 68464 at 0.023 mg/L and 0.037 mg/L, respectively. TPH DRO was detected in sample EB-6-28-22 at a concentration less than the blank detection, and the result was qualified as U. TPH DRO was detected in samples MKTF-30 and STP-1-NM at concentrations greater than the blank detection but less than or equal to 10 times the blank concentration, and the results were qualified as JB.</p> <p>TPH DRO non-detections in the associated samples and results greater than 10 times the blank detections did not require qualification.</p> | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | Yes | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| <p>Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.</p> <table border="1"> <thead> <tr> <th>Method</th> <th>Analytes</th> <th>Batch</th> <th>MS Sample Source</th> </tr> </thead> <tbody> <tr> <td>200.7</td> <td>Total Metals</td> <td>68545</td> <td>Not Prepared</td> </tr> <tr> <td>200.7</td> <td>Dissolved Metals</td> <td>B89154</td> <td>Not Prepared</td> </tr> <tr> <td>200.8</td> <td>Total Metals</td> <td>68545</td> <td>Not Prepared</td> </tr> <tr> <td>200.8</td> <td>Dissolved Metals</td> <td>A89215</td> <td>EB-6-28-22</td> </tr> <tr> <td>245.1</td> <td>Total Mercury</td> <td>68621</td> <td>OW-12A</td> </tr> <tr> <td>504.1</td> <td>EDB</td> <td>68566</td> <td>Not Prepared</td> </tr> </tbody> </table> | | Method | Analytes | Batch | MS Sample Source | 200.7 | Total Metals | 68545 | Not Prepared | 200.7 | Dissolved Metals | B89154 | Not Prepared | 200.8 | Total Metals | 68545 | Not Prepared | 200.8 | Dissolved Metals | A89215 | EB-6-28-22 | 245.1 | Total Mercury | 68621 | OW-12A | 504.1 | EDB | 68566 | Not Prepared |
| Method | Analytes | Batch | MS Sample Source | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 200.7 | Total Metals | 68545 | Not Prepared | | | | | | | | | | | | | | | | | | | | | | | | | | |

VALIDATION CRITERIA CHECKLIST

| Method | Analytes | Batch | MS Sample Source |
|-----------|-----------------|-----------|--------------------------|
| 8015D | TPH DRO and MRO | 68495 | Not Prepared |
| 8015D | TPH DRO | 68464 | Not Prepared |
| 8015D | TPH GRO | R89210 | Not Prepared |
| 8260B | VOC | B89226 | Not Prepared |
| 8260B | VOC | R89293 | Not Prepared |
| 8270C | SVOC | 68493 | Not Prepared |
| 8270C | SVOC | 68468 | Not Prepared |
| 8270 SIM | SVOC | 68493 | Not Prepared |
| 8270 SIM | SVOC | 68468 | Not Prepared |
| 4500 CN E | Cyanide | WG1889907 | Not Prepared |
| 4500 CN E | Cyanide | WG1891839 | Not Associated and OW-70 |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The MS/MSD percent recoveries and RPDs for project samples were within data validation and laboratory QC limits.

Recoveries and RPDs for MS/MSDs prepared from non-project samples were considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the exceptions listed in the following table.

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits | LCS/LCSD RPD | RPD QC Limits |
|----------|---------------------|-------|--------------|---------------|--------------------|--------------|---------------|
| 200.7 | Nickel, Total | 68545 | 132% | ----- | 70-130% | ----- | ----- |
| 8015D | TPH DRO | 68464 | 83.6% | Acceptable | 31.7-75.4% | Acceptable | 20% |
| 8015D | TPH DRO | 68495 | 75.5% | 78.6% | 31.7-75.4% | Acceptable | 20% |
| 8270C | Acenaphthene | 68493 | Acceptable | Acceptable | 21.3-104% | 53.0% | 45.3% |
| 8270C | 1,4-Dichlorobenzene | 68493 | Acceptable | Acceptable | 15-89.8% | 49.3% | 39.6% |
| 8270C | Phenol | 68493 | Acceptable | Acceptable | 17-61.1% | 55.7% | 42.5% |
| 8270C | Pyrene | 68493 | Acceptable | 55.4% | 61-123% | 30.2% | 11.8% |
| 8270C | Acenaphthene | 68468 | Acceptable | Acceptable | 21.3-104% | 58.7% | 45.3% |
| 8270C | 1,4-Dichlorobenzene | 68468 | Acceptable | Acceptable | 15-89.8% | 55.4% | 39.6% |
| 8270C | Phenol | 68468 | Acceptable | Acceptable | 17-61.1% | 59.2% | 42.5% |
| 8270C | Pyrene | 68468 | Acceptable | Acceptable | 61-123% | 19.2% | 11.8% |
| 8270 SIM | 1,4-Dioxane | 68493 | 49.0% | Acceptable | 20.2-48.4% | 86.5% | 30.1% |
| 8270 SIM | Naphthalene | 68493 | Acceptable | Acceptable | 21.3-79.9% | 87.9% | 25.6% |

VALIDATION CRITERIA CHECKLIST

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits | LCS/LCSD RPD | RPD QC Limits |
|----------|---------------------|-------|--------------|---------------|--------------------|--------------|---------------|
| 8270 SIM | 1-Methylnaphthalene | 68493 | Acceptable | Acceptable | 22.2-80.3% | 80.4% | 25% |
| 8270 SIM | 2-Methylnaphthalene | 68493 | Acceptable | Acceptable | 20.6-80.1% | 76.6% | 25% |
| 8270 SIM | Acenaphthene | 68493 | Acceptable | Acceptable | 29.8-82.7% | 80.3% | 27.8% |
| 8270 SIM | Fluorene | 68493 | Acceptable | Acceptable | 33.3-86% | 56.5% | 26.4% |
| 8270 SIM | Phenanthrene | 68493 | Acceptable | Acceptable | 38.2-93.9% | 33.3% | 27.9% |
| 8270 SIM | Chrysene | 68493 | Acceptable | Acceptable | 55.3-115% | 34.7% | 20% |

Analytes with LCS and/or LCSD recoveries greater than laboratory QC limits were detected in the associated samples, and the results were qualified as J+ to indicate estimated concentrations that may be biased high. Analytes with LCS/LCSD RPD values exceeding laboratory QC limits were qualified as J if detected and UJ if not detected due to poor precision.

Qualification was not required for acenaphthene and pyrene by Method 8270C as the associated samples' results were reported from Method 8270 SIM.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the exceptions listed in the following table.

| Method | Surrogate | Sample | Surrogate Recovery | QC Limits |
|----------|-----------------------------|-------------|--------------------|------------|
| 8015D | Bromofluorobenzene | OPIS-1 | 145% | 70-130% |
| 8270C | 2-Fluorophenol | OPIS-1 | 0% | 29.4-87.7% |
| 8270C | Phenol-d ₅ | OPIS-1 | 0% | 28.5-64.7% |
| 8270C | 2,4,6-Tribromophenol | OPIS-1 | 0% | 18.6-129% |
| 8270C | Nitrobenzene-d ₅ | OPIS-1 | 0% | 36.9-103% |
| 8270C | 2-Fluorobiphenyl | OPIS-1 | 0% | 38.1-99.9% |
| 8270C | 4-Terphenyl-d ₁₄ | OPIS-1 | 0% | 48-155% |
| 8270 SIM | Nitrobenzene-d ₅ | OPIS-1 | 0% | 31.6-100% |
| 8270 SIM | 2-Fluorobiphenyl | OPIS-1 | 0% | 26.7-90.1% |
| 8270 SIM | 4-Terphenyl-d ₁₄ | OPIS-1 | 0% | 72.3-147% |
| 8015D | Bromofluorobenzene | OW-12A | 261% | 70-130% |
| 8270C | Phenol-d ₅ | OW-12A | 0% | 28.5-64.7% |
| 8270 SIM | 4-Terphenyl-d ₁₄ | OW-12A | 66.1% | 72.3-147% |
| 8015D | Bromofluorobenzene | OW-70 | 441% | 70-130% |
| 8270C | 2,4,6-Tribromophenol | DUP-6-28-22 | 15.6% | 18.6-129% |
| 8270 SIM | 4-Terphenyl-d ₁₄ | DUP-6-28-22 | 71.2% | 72.3-147% |

The analyte associated with bromofluorobenzene (TPH GRO) was detected in the affected samples and was qualified as J+ to indicate estimated concentrations that may be biased high.

The semivolatile organic compound results for sample OPIS-1 were not qualified based on the surrogate non-conformances in the Method 8270C and Method 8270 SIM analyses since the applied dilutions of 10 times resulted in surrogate concentrations below routinely calibrated levels, and these results were deemed unreliable and possibly inaccurate.

Since Methods 8270C and 8270 SIM surrogate associations were not available from the laboratory, qualification was assigned to all the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the samples OW-12A and DUP-6-28-22, and qualification of sample data was not required.

Qualification was not required based on surrogate nonconformance in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

VALIDATION CRITERIA CHECKLIST

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB-6-28-22, and one equipment blank sample, EB-6-28-22, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples, with the exceptions listed in the following table.

| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration</u> |
|------------------------|---------------|-----------------------|----------------------|
| Trip Blank | 8260B | Acetone | 3.2 µg/L |
| FB-6-28-22 | 8260B | Acetone | 6.4 µg/L |
| FB-6-28-22 | 8260B | Chloromethane | 0.50 µg/L |
| EB-6-28-22 | 8260B | Acetone | 5.9 µg/L |
| EB-6-28-22 | 8260B | Chloromethane | 0.41 µg/L |
| EB-6-28-22 | 200.7 | Dissolved Zinc | 0.0038 mg/L |
| EB-6-28-22 | 8015D | TPH GRO | 0.010 mg/L |
| EB-6-28-22 | 8015D | TPH DRO | 0.022 mg/L |

Detections in the associated samples that were less than the applicable reporting limits were assigned U qualifiers. Detections in the associated samples that were greater than the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

The TPH DRO results were previously qualified due to laboratory blank contamination in batches 68495 and 68464; therefore, additional qualification due to the equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples. Sample DUP-6-28-22 was collected as a field duplicate of sample MKTF-29.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exceptions.

The RPD value for TPH DRO exceeded the data validation QC limit of 30% at 56.2%, which was evidence of poor precision. The TPH DRO results were qualified as J for samples MKTF-29 and DUP-6-28-22.

An RPD value could not be calculated for TPH MRO for the field duplicate pairs MKTF-29 and DUP-6-28-22 because the analyte was detected in the parent sample and was undetected in the duplicate sample. As the detection in the parent was greater than two times the reporting limits, TPH MRO was qualified as J and UJ for the parent and duplicate samples, respectively.

VALIDATION CRITERIA CHECKLIST

22. For laboratory duplicates prepared from project samples, were RPDs within data validation or laboratory QC limits? N/A

Comments: Laboratory duplicates prepared for these analyses and laboratory duplicate sample sources are summarized in the following table.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>Laboratory Duplicate Sample Source</u> |
|---------------|-----------------|--------------|---|
| 4500 CN E | Cyanide | WG1889907 | Not Associated |
| 4500CN E | Cyanide | WG1891839 | Not Associated |

Not Associated – The laboratory duplicate sample source was not associated with this project.

The RPD values for laboratory duplicate samples prepared from non-project samples were considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

23. Were the following data relationships realistic? N/A
- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)?

Comments: Target analytes were not reported by more than one method.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results. The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |

| Vanadium, Total | 200.7 | 0.0073 mg/L | 0.0072 mg/L | 1.4% +/-RL |
| Zinc, Dissolved | 200.7 | 0.0087 mg/L | 0.0086 mg/L | 1.2% +/-RL |
| Zinc, Total | 200.7 | 0.013 mg/L | 0.0082 mg/L | 45.3% +/-RL |
| Arsenic, Dissolved | 200.8 | 0.00083 mg/L | 0.00080 mg/L | 3.7% +/-RL |
| Arsenic, Total | 200.8 | 0.00096 mg/L | 0.00095 mg/L | 1.0% +/-RL |
| Lead, Dissolved | 200.8 | 0.000064 mg/L | 0.000061 mg/L | 4.8% +/-RL |
| Lead, Total | 200.8 | 0.00053 mg/L | 0.00040 mg/L | 28.0% +/-RL |
| Selenium, Dissolved | 200.8 | ND (0.0010 mg/L) | 0.00090 mg/L | DL |
| Selenium, Total | 200.8 | 0.00075 mg/L | 0.00041 mg/L | 58.6% +/-RL |
| Cyanide, Total | 4500 CN E | 6.31 µg/L | 6.92 µg/L | 9.2% +/-RL |

Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL). **TPH MRO was detected in the parent sample, but not in the duplicate sample. As the detected result was greater than two times the reporting limit, TPH MRO was qualified as J and UJ for the parent and duplicate samples, respectively.**

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

The RPD value for TPH DRO exceeded the data validation QC limit and was qualified as J for samples MKTF-29 and DUP-6-28-22 due to evidence of poor precision.

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| HR-SUR | The surrogate percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| ERPD-FD | High field duplicate RPD. |
| MBD | Method blank detection |
| FBD | Field blank detection |
| EBD | Equipment blank detection |
| TBD | Trip blank detection |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |
| ERPD-LCS | The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision. |

| Reviewer: Charles Ballek, Senior Chemist | |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-6-29-22 | 2206G22-001 |
| MKTF-44 | 2206G22-002 |
| OW-57 | 2206G22-003 |
| OW-58 | 2206G22-004 |
| OW-58A | 2206G22-005 |
| DUP-6-29-22 | 2206G22-006 |
| FB-6-29-22 | 2206G22-007 |
| Trip Blank | 2206G22-008 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| J- | The result is an estimated concentration, but may be biased low |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 450 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformances related to this data set.

Method 8270C: The laboratory control spike duplicate (LCSD) for Method 8270 had a low recovery for pyrene. The laboratory control spike (LCS) had acceptable recovery.

Naphthalene, 1-methylnaphthalene, and 2-methylnaphthalene may be reported by either EPA Method 8270 or EPA Method 8270 SIM, depending which method needs the least dilution.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

J – Analyte detected below quantitation limits.

J6 – The sample matrix interfered with the ability to make any accurate determination; spike value is low.

P1 – RPD value not applicable for sample concentrations less than 5 times the reporting limit.

R – % RPD outside of range.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present nor required on the coolers because the samples were transferred to a courier for delivery to the laboratory, and custody was maintained at all times.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| Method | Sample(s) | Analyte(s) | Dilution Factor |
|--------|---------------------------|----------------------------|-----------------|
| 200.7 | OW-57 | Dissolved Barium | 5 |
| 200.7 | OW-58A | Dissolved and Total Barium | 5 |
| 200.8 | OW-57 | Select Total Metals | 5 |
| 245.1 | OW-58A | Total Mercury | 5 |
| 200.7 | OW-58, DUP-6-29-22 | Dissolved and Total Barium | 10 |
| 8015D | OW-57, OW-58, DUP-6-29-22 | DRO and MRO | 10 |
| 200.7 | OW-57 | Total Metals | 20 |
| 200.8 | OW-57 | Total Lead | 20 |
| 8015D | OW-58A | GRO | 20 |
| 8015D | OW-57, OW-58, DUP-6-29-22 | GRO | 50 |
| 8260B | Multiple Samples | Select VOCs | 50 |
| 200.7 | OW-57 | Total Barium | 100 |
| 8260B | Multiple Samples | Benzene | 500 |

| VALIDATION CRITERIA CHECKLIST | |
|--|-----|
| 5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? | No |
| <p>Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.</p> <p>The CoC requested total and dissolved metals using only Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> <p>The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and therefore, was an acceptable replacement.</p> | |
| 6. Were samples received in good condition within method-specified requirements? | No |
| <p>Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ at 1.3°C, 2.3°C, and 3.6°C as noted on the CoC and the <i>Sample Log-in Check List</i>. Samples transferred to Pace National were received in good condition with the cooler temperature outside the recommended range at 0.4°C as noted on the CoC.</p> <p>The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen.</p> <p>The laboratory noted that additional nitric acid preservative was added to samples OW-57 and OW-58A to adjust the pH to meet the method requirement. Validation action was not required.</p> | |
| 7. Were samples extracted/digested and analyzed within method-specified or technical holding times? | Yes |
| <p>Comments: The samples were extracted/digested and analyzed within method-specific holding times.</p> | |
| 8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. | Yes |
| <p>Comments: The results were reported in concentration units of micrograms per liter ($\mu\text{g/L}$) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.</p> | |
| 9. Did the laboratory provide any specific initial and/or continuing calibration results? | No |
| <p>Comments: Initial and continuing calibration data were not included as part of this data set.</p> | |
| 10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? | N/A |
| <p>Comments: Initial and continuing calibration data were not included as part of this data set.</p> | |
| 11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | Yes |
| <p>Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.</p> | |
| 12. Were target analytes reported as not detected in the laboratory blanks? | No |
| <p>Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exception.</p> <p>TPH DRO was detected in the laboratory blank for Method 8015D batch 68495 at a concentration of 0.023 mg/L. TPH DRO was detected in samples EB-6-29-22 and MKTF-44 at concentrations less than the laboratory reporting limit and the results were assigned U qualifiers. The TPH DRO results in the remaining associated samples were greater than ten times the blank concentration and did not require qualification.</p> | |

VALIDATION CRITERIA CHECKLIST

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batch. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| Method | Analytes | Batch | MS Sample Source |
|-----------|-----------------------------|-----------|-----------------------|
| 200.7 | Total Metals | 68545 | EB-6-29-22, MKTF-44 |
| 200.7 | Dissolved Metals | A89290 | Not Prepared |
| 200.7 | Dissolved Barium | A89335 | Not Prepared |
| 200.7 | Dissolved Barium | B89506 | Not Prepared |
| 200.7 | Dissolved Barium | C89417 | OW-58A |
| 200.8 | Total Metals | 68545 | Not Prepared |
| 200.8 | Dissolved Metals | A89215 | Not Prepared |
| 245.1 | Total and Dissolved Mercury | 68622 | OW-58A |
| 504.1 | EDB | 68565 | Not Prepared |
| 504.1 | EDB | 68566 | Not Prepared |
| 4500CN E | Cyanide | WG1889913 | Not Associated |
| 4500CN E | Cyanide | WG1893803 | OW-57, Not Associated |
| 8015D | TPH DRO and MRO | 68495 | Not Prepared |
| 8015D | GRO | G89271 | MKTF-44 |
| 8260B | VOC | R89230 | MKTF-44 |
| 8260B | VOC | R89347 | Not Prepared |
| 8270C SIM | SVOC | 68493 | Not Prepared |
| 8270C | SVOC | 68493 | Not Prepared |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The MS/MSD percent recoveries and RPDs for project samples were within data validation and laboratory QC limits, with the following exception.

The MSD recovery for cyanide in Method 4500CN E batch WG1893803 was outside the laboratory QC limits of 90.0-110% at 87.5%. However, the recoveries were within data validation limits of 75-125%. Validation action was not required.

The percent recoveries and RPD values for MS/MSDs prepared from non-project samples were evaluated and considered, but data were not qualified based on those results since matrix similarity to project samples could not be guaranteed.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

VALIDATION CRITERIA CHECKLIST

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits?

No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits | LCS/LCSD RPD | RPD QC Limits |
|-----------|---------------------|--------|--------------|---------------|--------------------|--------------|---------------|
| 200.7 | Total Nickel | 68545 | 132% | ----- | 70-130% | ----- | ----- |

| 8270C SIM | Chrysene | 68493 | Acceptable | Acceptable | 55.3-115% | 34.7% | 20% |

The target analytes total nickel and DRO were detected in the associated samples, and the results were qualified as J+ based on the evidence of potential high bias. Non-detections of total nickel and 1,4-dioxane in the associated samples did not require qualification based on the evidence of potential high bias.

Detections of the analytes with LCS and/or LCSD recoveries less than the lower QC limits in the associated samples were qualified as J- due to evidence of potential low bias. Non-detections of these analytes in the associated samples were qualified as UJ.

The analytes with LCS/LCSD RPD values that exceeded the QC limit were qualified as J for detections and UJ for non-detections for the associated samples due to evidence of poor precision.

VALIDATION CRITERIA CHECKLIST

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

| Method | Surrogate | Sample | Surrogate Recovery | QC Limits |
|-----------|-----------------------------|-------------|--------------------|------------|
| 8270C | 2-Fluorophenol | DUP-6-29-22 | 10.4% | 29.4-87.7% |
| 8270C | 2,4,6-Tribromophenol | DUP-6-29-22 | 4.47% | 18.6-129% |
| 8270C-SIM | 4-Terphenyl-d ₁₄ | OW-58 | 71.8% | 72.3-147% |
| 8270C-SIM | 4-Terphenyl-d ₁₄ | DUP-6-29-22 | 67.6% | 72.3-147% |

Since Method 8270C and 8270C-SIM surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the Method 8270C-SIM analysis of samples OW-58 and DUP-6-9-22, and qualification of sample data was not required.

Phenol was detected in sample DUP-6-29-22 and this result was qualified as J-. The remaining SVOC target analytes were not detected in sample DUP-6-29-22, and these results were qualified as UJ, due to the evidence of potential low bias.

The DRO and MRO results for samples OW-57, OW-58, and DUP-6-9-22 were not qualified based on the surrogate non-conformances in the Method 8015D analyses since the applied dilutions of 10 times resulted in surrogate concentrations below routinely calibrated levels and those results were deemed unreliable and possibly inaccurate.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB-6-29-22, and one equipment blank sample, EB-6-29-22, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| Blank Sample ID | Method | Analyte | Concentration |
|-----------------|--------|----------------|---------------|
| Trip Blank | 8260B | Acetone | 13 µg/L |
| EB-6-29-22 | 200.7 | Dissolved Zinc | 0.0098 mg/L |
| EB-6-29-22 | 8015D | DRO | 0.025 mg/L |
| EB-6-29-22 | 8260B | Acetone | 8.6 µg/L |

Detections of acetone and dissolved zinc in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. The detections of dissolved zinc in the associated samples that were greater than or equal to the reporting limit but less than 10 times the blank result was assigned JB qualifiers. Non-detections of acetone in the associated samples did not require qualification.

The DRO results for the samples in batch 68495 were previously qualified due to a laboratory blank detection; therefore, additional qualification due to the equipment blank contamination was not required.

VALIDATION CRITERIA CHECKLIST

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples.

Sample DUP-6-29-22 was collected as a field duplicate of sample OW-58.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exception.

RPD value for phenol exceeded the data validation limit of 30% at 45.6%. The phenol results for samples OW-58 and DUP-6-29-22 were assigned J qualifiers due to evidence of poor precision.

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? Yes

Comments: Laboratory duplicates were prepared for these analyses and the laboratory duplicate sample sources are summarized in the following table.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>Laboratory Duplicate Sample Source</u> |
|---------------|-----------------|--------------|---|
| 4500CN E | Cyanide | WG1889913 | Not Associated |
| 4500CN E | Cyanide | WG1893803 | OW-57, Not Associated |

The RPD for the laboratory duplicate prepared from sample OW-57 was not applicable since the results for both measurements were not detected.

The RPD values for laboratory duplicate samples prepared from non-project samples were evaluated and considered but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? N/A

Comments: Target analytes were not reported by more than one method in this data set.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
|------------------|----------------|----------------------------|--------------------------------|
| EB-6-29-22 | Zinc | ND | 0.0098 |
| DUP-6-29-22 | Zinc | 0.0060 | 0.011 |

The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

FIELD DUPLICATE SUMMARY

| Client Sample ID: OW-58
Field Duplicate Sample ID: DUP-6-29-22 | | | | |
|---|----------------|-------------------|------------------|-----------------------------------|
| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
| Barium, Dissolved | E 200.7 | 5.1 mg/L | 5.0 mg/L | 2.0% |
| Barium, Total | E 200.7 | 5.5 mg/L | 5.6 mg/L | 1.8% |
| Cobalt, Total | E 200.7 | ND (0.0060 mg/L) | 0.0039 mg/L | DL |
| Nickel, Dissolved | E 200.7 | 0.050 mg/L | 0.051 mg/L | 2.0% |
| Nickel, Total | E 200.7 | 0.058 mg/L | 0.055 mg/L | 5.3% |

| n-Propylbenzene | SW8260B | 95 µg/L | 93 µg/L | 2.1% +/-RL |
| sec-Butylbenzene | SW8260B | 7.3 µg/L | ND (50 µg/L) | DL |
| Toluene | SW8260B | 39 µg/L | 40 µg/L | 2.5% +/-RL |
| Xylenes, Total | SW8260B | 130 µg/L | 140 µg/L | 7.4% +/-RL |
| 1-Methylnaphthalene | SW8270C | 68 µg/L | 65 µg/L | 4.5% |
| 2-Methylnaphthalene | SW8270C | 77 µg/L | 73 µg/L | 5.3% |
| Acenaphthene | SW8270C | 2.7 µg/L | 2.2 µg/L | 20.4% |
| Anthracene | SW8270C | 0.40 µg/L | 0.30 µg/L | 28.6% +/-RL |
| Fluoranthene | SW8270C | 0.24 µg/L | 0.22 µg/L | 8.7% +/-RL |
| Fluorene | SW8270C | 3.7 µg/L | 2.9 µg/L | 24.2% |
| Naphthalene | SW8270C | 140 µg/L | 130 µg/L | 7.4% |
| Phenanthrene | SW8270C | 3.3 µg/L | 2.5 µg/L | 27.6% |
| Phenol | SW8270C | 70 µg/L | 44 µg/L | 45.6% |
| Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020. | | | | |
| DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL). | | | | |

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

RPD value for phenol exceeded the data validation limit of 30% at 45.6%, which was evidence of poor precision. The phenol results were qualified as J for samples OW-58 and DUP-6-29-22.

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| EBD | Equipment blank detection |
| ERPD-FD | High field duplicate RPD. |
| ERPD-LCS | The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision. |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-LCS | The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| LR-SUR | The surrogate percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| MBD | Method blank detection |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |
| TBD | Trip blank detection |

| Data Validator: Daran O'Hollearn, Lead Project Scientist | |
| Reviewer: Mike Phillips, Senior Chemist | |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace National of Mount Juliet, Tennessee, and from Vista Analytical Laboratory of El Dorado Hills, California, evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-6-8-22 | 2206528-001 |
| OW-63 | 2206528-002 |
| OW-64 | 2206528-003 |
| OW-10 | 2206528-004 |
| FB-6-8-22 | 2206528-005 |
| DUP-6-8-22 | 2206528-006 |
| Trip Blank | 2206528-007 |
| Equipment Blank | 2206528-008 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ✓ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 384 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformances related to this data set.

Method 8015D DRO/MRO: The Laboratory control spike had elevated recovery that was due to laboratory error. The Laboratory control spike duplicate had acceptable recoveries.

Method 8270C: Naphthalene, 1-methylnaphthalene, and 2-methylnaphthalene may be reported by either EPA Method 8270 or EPA Method 8270 SIM, depending which method needs the least dilution. In this report naphthalene, 1-methylnaphthalene, and 2-methylnaphthalene were reported by EPA Method 8270 instead of EPA Method 8270 SIM for sample OW-63.

PFAS Isotope Dilution Method: Sample "OW-63" contained particulate and was centrifuged prior to extraction.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

J – Analyte detected below quantitation limits.

J6 – The sample matrix interfered with the ability to make any accurate determination; spike value is low.

R – RPD value outside of range.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present because the samples were transferred to a laboratory field courier service for transport from the field to the laboratory, and custody was maintained at all times.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| <u>Method</u> | <u>Sample(s)</u> | <u>Analyte(s)</u> | <u>Dilution Factor</u> |
|---------------|------------------|----------------------------|------------------------|
| 200.7 | OW-63 | Dissolved Barium | 5 |
| 200.8 | OW-64 | Total Arsenic and Selenium | 5 |
| 200.7 | OW-63 | Total Barium | 10 |
| 8260B | OW-10 | Methylene Chloride | 10 |
| 8015D | OW-63 | TPH GRO | 50 |
| 8260B | OW-63 | Select VOCs | 50 |
| 8260B | OW-63 | Benzene | 500 |

| VALIDATION CRITERIA CHECKLIST | |
|---|-----|
| 5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? | No |
| <p>Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.</p> <p>The CoC requested total and dissolved metals using Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> <p>The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> | |
| 6. Were samples received in good condition within method-specified requirements? | No |
| <p>Comments: Samples were received on ice, in good condition, and with the cooler temperatures within the recommended temperature range of 4°C ± 2°C at 3.5°C, 3.8°C, and 3.9°C as noted on the CoC and the <i>Sample Log-in Check List</i>. Samples transferred to Pace National were received in good condition with the cooler temperature within the recommended range at 2.7°C as noted on the CoC. Samples transferred to Vista were received in good condition with the cooler temperature outside the recommended range at 1.1°C as noted on the <i>Sample Log-in Checklist</i>. The cooler temperature below 2.0°C was judged as acceptable since the laboratory did not report the sample containers as broken or frozen.</p> | |
| 7. Were samples extracted/digested and analyzed within method-specified or technical holding times? | Yes |
| <p>Comments: The samples were extracted/digested and analyzed within method-specific holding times.</p> | |
| 8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. | Yes |
| <p>Comments: The results were reported in concentration units of nanograms per liter (ng/L), micrograms per liter (µg/L), and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.</p> | |
| 9. Did the laboratory provide any specific initial and/or continuing calibration results? | No |
| <p>Comments: Initial and continuing calibration data were not included as part of this data set.</p> | |
| 10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? | N/A |
| <p>Comments: Initial and continuing calibration data were not included as part of this data set.</p> | |
| 11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | Yes |
| <p>Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.</p> | |
| 12. Were target analytes reported as not detected in the laboratory blanks? | No |
| <p>Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exception.</p> <p>TPH DRO was detected in the laboratory blank for Method 8015D batch 68038 at a concentration of 0.029 mg/L. The sample EB-6-8-22 TPH DRO result detected below the laboratory reporting limit was qualified with a U flag. Samples DUP-6-8-22 and OW-10 TPH DRO results greater than the blank detection and/or the laboratory reporting limit but less than 10 times the blank concentration were qualified with a JB flag. Detections of this analyte greater than ten times the blank concentration did not require qualification.</p> | |

VALIDATION CRITERIA CHECKLIST

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>MS Sample Source</u> |
|---------------------|-----------------------------|--------------|-------------------------|
| 200.7 | Total Metals | 68127 | EB-6-8-22 |
| 200.7 | Dissolved Metals | B88662 | Not Prepared |
| 200.8 | Total Metals | 68127 | OW-64 |
| 200.8 | Dissolved Metals | A88688 | Not Prepared |
| 245.1 | Total and Dissolved Mercury | 68088 | Not Prepared |
| 504.1 | EDB | 68078 | Not Prepared |
| 4500CN E | Cyanide | WG1882735 | Not Associated |
| 8015D | TPH DRO and MRO | 68038 | Not Prepared |
| 8015D | TPH GRO | A88732 | EB-6-8-22 |
| 8260B | Methylene Chloride | A88912 | Not Prepared |
| 8260B | VOCs | R88822 | OW-64 |
| 8270C and 8270C SIM | SVOCs | 68135 | Not Prepared |
| PFAS Method | PFAs | B22F113 | Not Prepared |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The percent recoveries and RPDs for MS/MSDs prepared from project samples were within data validation and laboratory QC limits.

The percent recoveries and RPD values for MS/MSDs prepared from non-project samples were evaluated and considered, but data were not qualified based on those results since matrix similarity to project samples could not be guaranteed.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

VALIDATION CRITERIA CHECKLIST

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits | LCS/LCSD RPD | RPD QC Limits |
|--------------|-----------------------|---------------|--------------|---------------|--------------------|--------------|---------------|
| 200.7 | Total Cobalt | 68127 | 133% | ----- | 70-130% | ----- | ----- |
| 200.7 | Dissolved Zinc | B88662 | 144% | ----- | 70-130% | ----- | ----- |
| 8015D | TPH DRO | 68038 | 642% | 77.6% | 31.7-75.4% | 157% | 20% |

Dissolved zinc and TPH DRO were detected in the associated samples, and these results were qualified as J+ due to evidence of potential high bias. Non-detections of total cobalt in the associated samples did not require qualification.

TPH DRO was detected in the associated samples, and these results were qualified as J due to evidence of poor precision.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exception.

The Method 8015D surrogate BFB was recovered in sample OW-64 outside the acceptance limits of 70-130% at 288%. The associated target analyte (TPH GRO) was detected in sample OW-64 and was assigned a J+ qualifier due to evidence of potential high bias.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample FB-6-8-22, and two equipment blank samples, EB-6-8-22 and Equipment Blank, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| Blank Sample ID | Method | Analyte | Concentration |
|------------------|--------------|-----------------------|--------------------|
| EB-6-8-22 | 8015D | TPH DRO | 0.044 mg/L |
| EB-6-8-22 | 8270 SIM | 1,4-Dioxane | 0.30 µg/L |
| EB-6-8-22 | 200.7 | Dissolved Zinc | 0.0068 mg/L |

Detections of dissolved zinc in the associated samples that were less than the blank result and less than the applicable reporting limits were assigned U qualifiers. The detection of dissolved zinc in the associated sample OW-63 that was greater than the reporting limit but less than 10 times the blank result was assigned a JB qualifier. Non-detections of 1,4-dioxane in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

The TPH DRO results in batch 68038 were previously qualified due to laboratory blank contamination; therefore, additional qualification due to the equipment blank contamination was not required.

| VALIDATION CRITERIA CHECKLIST | |
|---|-----|
| 20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? | Yes |
| Comments: The number of field duplicates collected was equal to at least 10% of the number of samples. Sample DUP-6-8-22 was collected as a field duplicate of sample OW-10. | |
| 21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? | Yes |
| Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples. | |

VALIDATION CRITERIA CHECKLIST

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? N/A

Comments: Laboratory duplicates were prepared for these analyses, and the laboratory duplicate sample sources are summarized in the following table.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>Laboratory Duplicate Sample Source</u> |
|---------------|-----------------|--------------|---|
| 4500CN E | Cyanide | WG1882735 | Not Associated |
| 4500CN E | Cyanide | WG1882735 | EB-6-8-22 |

Not Associated – The laboratory duplicate sample source was not associated with this project.

The RPDs for laboratory duplicates prepared from project samples were not applicable since the results for one or both measurements were within 5 times the reporting limit.

The RPD values for the laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? N/A

Comments: Target analytes were not reported by more than one method in this data set.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results. The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
|------------------|----------------|----------------------------|--------------------------------|
| OW-63 | Antimony | ND | 0.00061 |
| OW-10 | Cobalt | ND | 0.0039 |
| DUP-6-8-22 | Cobalt | ND | 0.0028 |
| OW-63 | Vanadium | ND | 0.0027 |
| EB-6-8-22 | Zinc | ND | 0.0068 |
| OW-63 | Zinc | ND | 0.014 |

FIELD DUPLICATE SUMMARY

| Client Sample ID: OW-10
Field Duplicate Sample ID: DUP-6-8-22 | | | | |
|--|---------|-------------------|------------------|-----------------------------------|
| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
| Barium, Dissolved | E 200.7 | 0.046 mg/L | 0.045 mg/L | 2.2% |

| MTBE | SW8260B | 7.1 µg/L | 7.3 µg/L | 2.8% |
| 1,4-Dioxane | SW8270C | 3.3 µg/L | 3.1 µg/L | 6.3% |
| Pyrene | SW8270C | ND (1.0 µg/L) | 0.60 µg/L | DL |
| <p>Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.</p> <p>DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).</p> <p>+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.</p> | | | | |

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| ERPD-LCS | The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision. |
| FBD | Field blank detection |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| HR-SUR | The surrogate percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| MBD | Method blank detection |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |

| Analyte | Method | Field Sample ID | Lab Sample ID | Result | Limit | Units | Reviewer Qualifier | DV Flag Reasons |
|---------------------|---------|-----------------|---------------|----------|---------|-------|--------------------|-----------------|
| 1,4-Dioxane | SW8270C | EB-6-8-22 | 2206528-001c | 0.30 | 1.0 | µg/L | J | MDLRL |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-6-9-22 | 2206602-001 |
| BW-5C | 2206602-002 |
| OW-50 | 2206602-003 |
| OW-52 | 2206602-004 |
| OW-29 | 2206602-005 |
| OW-13 | 2206602-006 |
| FB-6-9-22 | 2206602-007 |
| DUP-6-9-22 | 2206602-008 |
| BW-5B | 2206602-009 |
| Trip Blank | 2206602-010 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| J- | The result is an estimated concentration, but may be biased low |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 630 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformance related to this data set.

Method 8270C: Sample OW-29 had poor surrogate recoveries due to the emulsive nature of the sample.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

J – Analyte detected below quantitation limits.

J – The identification of the analyte is acceptable; the reported value is an estimate.

P1 – RPD value not applicable for sample concentrations less than 5 times the reporting limit.

S – % Recovery outside of range due to dilution or matrix interference.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present nor required on the coolers because the samples were transferred to a courier for delivery to the laboratory, and custody was maintained at all times.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| <u>Method</u> | <u>Sample(s)</u> | <u>Analyte(s)</u> | <u>Dilution Factor</u> |
|---------------|---------------------|-----------------------------------|------------------------|
| 200.8 | OW-29, OW-52, BW-5C | Select Dissolved and Total Metals | 5 |
| 8260B | EB-6-9-22 | Methylene Chloride | 10 |
| 8260B | OW-29 | MTBE | 100 |

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? No

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.

The CoC requested total and dissolved metals using only Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

6. Were samples received in good condition within method-specified requirements? No

Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ between 0.5°C and 5.8°C as noted on the CoC and the *Sample Log-in Check List*. Samples transferred to Pace National were received in good condition with the cooler temperature within the recommended range at 5.9°C as noted on the CoC.

The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen.

| VALIDATION CRITERIA CHECKLIST | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
|--|-----------------------------|-----------|------------------|--------|----------|-------|------------------|-------|--------------|-------|-------|-------|------------------|--------|--------------|-------|------------------|--------|-----------|-------|--------------|-------|-------|-------|------------------|--------|--------------|-------|------------------|--------|------------------|-------|-----------------------------|-------|-------|-------|-----|-------|--------------|----------|---------|-----------|----------------|-------|-----------------|-------|--------------|-------|-----|--------|-----------|
| 7. Were samples extracted/digested and analyzed within method-specified or technical holding times? | Yes | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Comments: The samples were extracted/digested and analyzed within method-specific holding times. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. | Yes | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Comments: The results were reported in concentration units of micrograms per liter (µg/L) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 9. Did the laboratory provide any specific initial and/or continuing calibration results? | No | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Comments: Initial and continuing calibration data were not included as part of this data set. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? | N/A | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Comments: Initial and continuing calibration data were not included as part of this data set. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | Yes | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 12. Were target analytes reported as not detected in the laboratory blanks? | No | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exception.
TPH DRO was detected in the laboratory blank for Method 8015D batch 68123 at a concentration of 0.021 mg/L. Sample results detected below the blank concentration and/or the laboratory reporting limit were qualified with a U flag. The TPH DRO result for sample BW-5C was greater than the laboratory reporting limit but less than or equal to 10 times the blank concentration and was assigned a JB qualifier. The TPH DRO results in the associated samples OW-29 and OW-52 were greater than ten times the blank concentration and did not require qualification. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | Yes | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| <table border="1"> <thead> <tr> <th>Method</th> <th>Analytes</th> <th>Batch</th> <th>MS Sample Source</th> </tr> </thead> <tbody> <tr> <td>200.7</td> <td>Total Metals</td> <td>68127</td> <td>BW-5B</td> </tr> <tr> <td>200.7</td> <td>Dissolved Metals</td> <td>A88751</td> <td>Not Prepared</td> </tr> <tr> <td>200.7</td> <td>Dissolved Metals</td> <td>B88784</td> <td>EB-6-9-22</td> </tr> <tr> <td>200.8</td> <td>Total Metals</td> <td>68127</td> <td>OW-29</td> </tr> <tr> <td>200.8</td> <td>Dissolved Metals</td> <td>B88918</td> <td>Not Prepared</td> </tr> <tr> <td>200.8</td> <td>Dissolved Metals</td> <td>C88688</td> <td>EB-6-9-22, BW-5C</td> </tr> <tr> <td>245.1</td> <td>Total and Dissolved Mercury</td> <td>68089</td> <td>BW-5B</td> </tr> <tr> <td>504.1</td> <td>EDB</td> <td>68078</td> <td>Not Prepared</td> </tr> <tr> <td>4500CN E</td> <td>Cyanide</td> <td>WG1882743</td> <td>Not Associated</td> </tr> <tr> <td>8015D</td> <td>TPH DRO and MRO</td> <td>68123</td> <td>Not Prepared</td> </tr> <tr> <td>8015D</td> <td>GRO</td> <td>C88732</td> <td>EB-6-9-22</td> </tr> </tbody> </table> | | | | Method | Analytes | Batch | MS Sample Source | 200.7 | Total Metals | 68127 | BW-5B | 200.7 | Dissolved Metals | A88751 | Not Prepared | 200.7 | Dissolved Metals | B88784 | EB-6-9-22 | 200.8 | Total Metals | 68127 | OW-29 | 200.8 | Dissolved Metals | B88918 | Not Prepared | 200.8 | Dissolved Metals | C88688 | EB-6-9-22, BW-5C | 245.1 | Total and Dissolved Mercury | 68089 | BW-5B | 504.1 | EDB | 68078 | Not Prepared | 4500CN E | Cyanide | WG1882743 | Not Associated | 8015D | TPH DRO and MRO | 68123 | Not Prepared | 8015D | GRO | C88732 | EB-6-9-22 |

| 200.8 | Dissolved Metals | B88918 | Not Prepared | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 200.8 | Dissolved Metals | C88688 | EB-6-9-22, BW-5C | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 245.1 | Total and Dissolved Mercury | 68089 | BW-5B | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 504.1 | EDB | 68078 | Not Prepared | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 4500CN E | Cyanide | WG1882743 | Not Associated | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 8015D | TPH DRO and MRO | 68123 | Not Prepared | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 8015D | GRO | C88732 | EB-6-9-22 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

VALIDATION CRITERIA CHECKLIST

| Method | Analytes | Batch | MS Sample Source |
|-----------|--------------------|--------|------------------|
| 8260B | MTBE | A88912 | Not Prepared |
| 8260B | Methylene Chloride | A88962 | Not Prepared |
| 8260B | VOC | R88822 | Not Prepared |
| 8270C SIM | SVOC | 68135 | Not Prepared |
| 8270C | SVOC | 68135 | Not Prepared |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The MS/MSD percent recoveries and RPDs for project samples were within data validation and laboratory QC limits.

The percent recoveries and RPD values for MS/MSDs prepared from non-project samples were evaluated and considered, but data were not qualified based on those results since matrix similarity to project samples could not be guaranteed.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | LCS Recovery | LCS/LCSD QC Limits |
|--------|------------------|--------|--------------|--------------------|
| 200.7 | Total Cobalt | 68127 | 133% | 70-130% |
| 200.7 | Dissolved Nickel | B88784 | 64.9% | 70-130% |

Total cobalt was detected in the associated sample BW-5C, and this result was qualified as J+ due to evidence of potential high bias. The remaining associated total cobalt results were non-detections, and qualification of data was not required.

Dissolved nickel was not detected in the associated sample EB-6-9-22. This result was qualified as UJ due to evidence of potential low bias.

VALIDATION CRITERIA CHECKLIST

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

| Method | Surrogate | Sample | Surrogate Recovery | QC Limits |
|--------|-----------------------------|--------|--------------------|------------|
| 8270C | 2-Fluorophenol | OW-29 | 20.4% | 29.4-87.7% |
| 8270C | Phenol-d ₅ | OW-29 | 16.6% | 28.5-64.7% |
| 8270C | Nitrobenzene-d ₅ | OW-29 | 26.7% | 36.9-103% |
| 8270C | 2-Fluorobiphenyl | OW-29 | 26.7% | 38.1-99.9% |

Since Method 8270C and 8270C SIM surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the Method 8270C SIM analysis of sample OW-29, and qualification of sample data was not required. **Di-n-butyl phthalate was detected in the Method 8270C analysis of sample OW-29, and this result was qualified as J- to indicate a potential low bias. The remaining Method 8270C SVOC results for sample OW-29 were non-detections, and these results were qualified as UJ due to the evidence of potential low bias.**

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB-6-9-22, and one equipment blank sample, EB-6-9-22, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| Blank Sample ID | Method | Analyte | Concentration |
|-----------------|--------|--------------------|---------------|
| EB-6-9-22 | 200.7 | Dissolved Zinc | 0.0065 mg/L |
| EB-6-9-22 | 8015D | TPH DRO | 0.017 mg/L |
| EB-6-9-22 | 8260B | Methylene Chloride | 370 µg/L |

Detections of dissolved zinc and methylene chloride in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. The detections of dissolved zinc in the associated samples OW-50 and OW-52 that were greater than the reporting limit but less than 10 times the blank result were assigned JB qualifiers. Non-detections of methylene chloride in the associated samples and dissolved zinc results greater than ten times the blank concentration did not require qualification.

The TPH DRO results for the samples in batch 68123 were previously qualified due to a laboratory blank detection; therefore, additional qualification due to the equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples.

Sample DUP-6-9-22 was collected as a field duplicate of sample BW-5B.

VALIDATION CRITERIA CHECKLIST

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exceptions.

The RPD value for MTBE exceeded the data validation limit of 30% at 53.2%, which was evidence of poor precision. The MTBE results were qualified as J for samples BW-5B and DUP-6-9-22.

An RPD value could not be calculated for methylene chloride for the field duplicate pair BW-5B and DUP-6-9-22 since the analyte was detected in the parent sample and was undetected in the duplicate sample. As the detection in the parent sample was greater than two times the reporting limit, methylene chloride was qualified as J and UJ for the parent and duplicate samples, respectively.

VALIDATION CRITERIA CHECKLIST

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? N/A

Comments: Laboratory duplicates were prepared for the analysis of cyanide in batch WG1882743 from samples not associated with this data set.

The RPD values for the laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? N/A

Comments: Target analytes were not reported by more than one method in this data set.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results. The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
|------------------|----------------|----------------------------|--------------------------------|
| OW-29 | Antimony | ND | 0.00067 |
| BW-5B | Antimony | ND | 0.00070 |
| OW-29 | Arsenic | ND | 0.00046 |
| OW-29 | Barium | 0.082 | 0.085 |
| BW-5B | Lead | ND | 0.000064 |
| BW-5C | Selenium | ND | 0.00040 |
| OW-13 | Vanadium | ND | 0.0031 |
| BW-5B | Vanadium | 0.0092 | 0.0096 |
| OW-29 | Zinc | ND | 0.12 |
| OW-52 | Zinc | ND | 0.013 |
| OW-13 | Zinc | 0.0045 | 0.0076 |
| DUP-6-9-22 | Zinc | ND | 0.0075 |
| BW-5B | Zinc | ND | 0.0096 |
| EB-6-9-22 | Zinc | ND | 0.0065 |
| BW-5C | Zinc | 0.0065 | 0.0086 |
| OW-50 | Zinc | 0.0043 | 0.011 |

FIELD DUPLICATE SUMMARY

| Client Sample ID: BW-5B
Field Duplicate Sample ID: DUP-6-9-22 | | | | |
|--|----------------|-------------------|----------------------|-----------------------------------|
| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
| Barium, Dissolved | E 200.7 | 0.26 mg/L | 0.27 mg/L | 3.8% |
| Barium, Total | E 200.7 | 0.28 mg/L | 0.28 mg/L | 0.0% |
| Vanadium, Dissolved | E 200.7 | 0.0096 mg/L | 0.0095 mg/L | 1.0% +/-RL |
| Vanadium, Total | E 200.7 | 0.0092 mg/L | 0.0096 mg/L | 4.3% +/-RL |

| Antimony, Dissolved | E200.8 | 0.00070 mg/L | ND (0.0010 mg/L) | DL |
| Arsenic, Dissolved | E200.8 | 0.00088 mg/L | 0.00089 mg/L | 1.1% +/-RL |
| Arsenic, Total | E200.8 | 0.0011 mg/L | 0.0010 mg/L | 9.5% +/-RL |
| Lead, Dissolved | E200.8 | 0.000064 mg/L | ND (0.00050 mg/L) | DL |
| Selenium, Dissolved | E200.8 | 0.00055 mg/L | 0.00082 mg/L | 39.4% +/-RL |
| Selenium, Total | E200.8 | 0.0011 mg/L | 0.0014 mg/L | 24.0% +/-RL |
| TPH DRO | SW8015 | 0.030 mg/L | 0.016 mg/L | 60.9% +/-RL |
| TPH GRO | SW8015 | 0.014 mg/L | 0.016 mg/L | 13.3% +/-RL |
| Methylene Chloride | SW8260B | 52 µg/L | ND (3.0 µg/L) | DL |
| MTBE | SW8260B | 8.7 µg/L | 15 µg/L | 53.2% |
| 1,4-Dioxane | SW8270C | 0.76 µg/L | 0.80 µg/L | 5.1% +/-RL |

Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

The RPD value for MTBE exceeded the data validation limit of 30% at 53.2%, which was evidence of poor precision. The MTBE results were qualified as J for samples BW-5B and DUP-6-9-22.

An RPD value could not be calculated for methylene chloride for the field duplicate pair BW-5B and DUP-6-9-22 since the analyte was detected in the parent sample and was undetected in the duplicate sample. As the detection in the parent sample was greater than two times the reporting limit, methylene chloride was qualified as J and UJ for the parent and duplicate samples, respectively.

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| EBD | Equipment blank detection |
| ERP-D | High field duplicate RPD. |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-LCS | The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| LR-SUR | The surrogate percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| MBD | Method blank detection |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |

| Analyte | Method | Field Sample ID | Lab Sample ID | Result | Limit | Units | Reviewer Qualifier | DV Flag Reasons |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace National of Mount Juliet, Tennessee, evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-6-14-22 | 2206781-001 |
| PW-3 | 2206781-002 |
| PW-4 | 2206781-003 |
| East LDU | 2206781-004 |
| West LDU | 2206781-005 |
| FB-6-9-22 | 2206781-006 |
| DUP-6-9-22 | 2206781-007 |
| Trip Blank | 2206781-008 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ⊗ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| J- | The result is an estimated concentration, but may be biased low |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 450 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformance related to this data set.

Method 8270C: Samples PW-3 and East LDU had poor surrogate recoveries due to the emulsive nature of the sample.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

D – Sample diluted due to matrix.

J – Analyte detected below quantitation limits.

R – RPD value outside of range.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? No

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present because the samples were transferred to a laboratory field courier service for transport from the field to the laboratory, and custody was maintained at all times

Samples FB-6-14-22 and DUP-6-14-22 were logged into the laboratory system as FB-6-9-22 and DUP-6-9-22, respectively.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| Method | Sample(s) | Analyte(s) | Dilution Factor |
|--------|----------------------|-----------------------------------|-----------------|
| 200.7 | East LDU, DUP-6-9-22 | Dissolved Chromium and Nickel | 5 |
| 200.7 | West LDU, DUP-6-9-22 | Total Chromium and Nickel | 5 |
| 200.8 | Multiple Samples | Select Total and Dissolved Metals | 5 |
| 200.7 | East LDU | Total Chromium and Nickel | 10 |
| 8015D | DUP-6-9-22 | TPH DRO and TPH MRO | 10 |
| 8260B | DUP-6-9-22 | Methylene Chloride | 10 |
| 200.8 | DUP-6-9-22 | Select Total Metals | 20 |

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? No

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.

The CoC requested total and dissolved metals using Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

VALIDATION CRITERIA CHECKLIST

6. Were samples received in good condition within method-specified requirements?

No

Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ at 0.8°C , 3.1°C , and 4.8°C as noted on the CoC and the *Sample Log-in Check List*. Samples transferred to Pace National were received in good condition with the cooler temperature within the recommended range at 2.7°C as noted on the CoC. The cooler temperature below 2.0°C was judged as acceptable since the laboratory did not report the sample containers as broken or frozen.

7. Were samples extracted/digested and analyzed within method-specified or technical holding times?

Yes

Comments: The samples were extracted/digested and analyzed within method-specific holding times.

8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil.

Yes

Comments: The results were reported in concentration units of micrograms per liter ($\mu\text{g/L}$) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.

9. Did the laboratory provide any specific initial and/or continuing calibration results?

No

Comments: Initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits?

N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method?

Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

12. Were target analytes reported as not detected in the laboratory blanks?

No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exception.

TPH DRO was detected in the laboratory blank for Method 8015D batch 68185 at a concentration of 0.018 mg/L. TPH DRO was detected in associated samples EB-6-14-22 and PW-3 at concentrations less than the laboratory reporting limit and the results were qualified with U flags. Non-detections of this analyte in the associated samples and results greater than ten times the blank concentration did not require qualification.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method?

Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| Method | Analytes | Batch | MS Sample Source |
|--------|-----------------------------|--------|----------------------|
| 200.7 | Total Metals | 68172 | West LDU, DUP-6-9-22 |
| 200.7 | Dissolved Metals | B88784 | EB-6-14-22 |
| 200.7 | Dissolved Silver | B88897 | Not Prepared |
| 200.8 | Total Metals | 68172 | Not Prepared |
| 200.8 | Dissolved Metals | B88918 | EB-6-14-22, PW-3 |
| 245.1 | Total and Dissolved Mercury | 68186 | Not Prepared |
| 504.1 | EDB | 68189 | Not Prepared |
| Method | Analytes | Batch | MS Sample Source |

VALIDATION CRITERIA CHECKLIST

| | | | |
|---------------------|-----------------|-----------|----------------|
| 4500CN E | Cyanide | WG1883737 | Not Associated |
| 8015D | TPH DRO and MRO | 68185 | Not Prepared |
| 8015D | TPH GRO | G88994 | Not Prepared |
| 8260B | VOCs | A88912 | Not Prepared |
| 8260B | VOCs | A88962 | Not Prepared |
| 8270C and 8270C SIM | SVOCs | 68202 | Not Prepared |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? No

Comments: The percent recoveries and RPDs for MS/MSDs prepared from project samples were within data validation and laboratory QC limits, with the following exceptions.

The MS and MSD recoveries for total silver in Method 200.7 batch 68172 were outside the QC limits of 75-125% at 46.5% and 49.1%, respectively. Total silver was not detected in the associated samples and the results were qualified as UJ due to evidence of potential low bias.

The percent recoveries and RPD values for MS/MSDs prepared from non-project samples were evaluated and considered but data were not qualified based on those results since matrix similarity to project samples could not be guaranteed.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits | LCS/LCSD RPD | RPD QC Limits |
|--------|---------------------|--------|--------------|---------------|--------------------|--------------|---------------|
| 200.7 | Total Barium | 68172 | 137% | ----- | 70-130% | ----- | ----- |
| 200.7 | Dissolved Nickel | B88784 | 64.9% | ----- | 70-130% | ----- | ----- |
| 245.1 | Total Mercury | 68186 | 145% | ----- | 70-130% | ----- | ----- |
| 8015D | TPH DRO | 68185 | 92.4% | 90.2% | 31.7-75.4% | Acceptable | 20% |
| 8270C | 1,4-Dichlorobenzene | 68202 | Acceptable | Acceptable | 15-89.8% | 47.0% | 39.6% |
| 8270C | Phenol | 68202 | Acceptable | Acceptable | 17-61.1% | 52.4% | 42.5% |
| 8270C | Pyrene | 68202 | Acceptable | Acceptable | 61-123% | 28.9% | 11.8% |

Total barium and TPH DRO were detected in the associated samples and these results were qualified as J+ due to evidence of potential high bias. The non-detections of total barium in the associated sample EB-6-14-22 and TPH DRO in sample PW-4 did not require qualification. Total mercury was not detected in the associated samples in Method 245.1 batch 68186 and the results did not require qualification based on the evidence of potential high bias.

Dissolved nickel was qualified as J- for detections and UJ for non-detections in the associated samples due to potential low bias.

The analytes with LCS/LCSD RPD values that exceeded the QC limit were qualified as J for detections and UJ for non-detections for the associated samples due to evidence of poor precision.

VALIDATION CRITERIA CHECKLIST

17. Were surrogate recoveries within laboratory QC limits?

No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

| Method | Surrogate | Sample | Surrogate Recovery | QC Limits |
|-----------|-----------------------------|------------|--------------------|------------|
| 8270C | 2-Fluorophenol | PW-3 | 24.0% | 29.4-87.7% |
| 8270C | Phenol-d ₅ | PW-3 | 18.0% | 28.5-64.7% |
| 8270C | Nitrobenzene-d ₅ | PW-3 | 29.8% | 36.9-103% |
| 8270C | 2-Fluorobiphenyl | PW-3 | 30.2% | 38.1-99.9% |
| 8015D | BFB | East LDU | 213% | 70-130% |
| 8270C | 2-Fluorophenol | East LDU | 1.79% | 29.4-87.7% |
| 8270C | Phenol-d ₅ | East LDU | 10.9% | 28.5-64.7% |
| 8270C | 2,4,6-Tribromophenol | East LDU | 10.7% | 18.6-129% |
| 8270C | Nitrobenzene-d ₅ | East LDU | 33.5% | 36.9-103% |
| 8270C SIM | 4-Terphenyl-d ₁₄ | East LDU | 56.9% | 72.3-147% |
| 8270C | Phenol-d ₅ | West LDU | 0% | 28.5-64.7% |
| 8015D | BFB | DUP-6-9-22 | 230% | 70-130% |
| 8270C SIM | 4-Terphenyl-d ₁₄ | DUP-6-9-22 | 65.7% | 72.3-147% |

Since Method 8270C and Method 8270C SIM surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the samples West LDU and DUP-6-9-22 and qualification of sample data was not required.

The associated target analytes in the samples with surrogate recoveries that were less than lower laboratory QC limits were not detected, and the results were qualified as UJ due to evidence of potential low bias.

TPH GRO was detected in samples East LDU and DUP-6-9-22 and these results were qualified as J+ due to evidence of potential high bias.

The TPH DRO and TPH MRO results for sample DUP-6-9-22 were not qualified based on the surrogate non-conformances in the Method 8015D analyses since the applied dilution of 10 times resulted in a surrogate concentration below routinely calibrated levels and those results were deemed unreliable and possibly inaccurate

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit?

Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample FB-6-9-22, and one equipment blank sample, EB 6-14-22, were collected as part of this sample set.

VALIDATION CRITERIA CHECKLIST

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration</u> |
|------------------------|---------------|---------------------------|----------------------|
| Trip Blank | 8260B | Chloromethane | 0.76 µg/L |
| Trip Blank | 8260B | Methylene Chloride | 0.52 µg/L |
| FB-6-9-22 | 8260B | Acetone | 3.5 µg/L |
| FB-6-9-22 | 8260B | Methylene Chloride | 0.72 µg/L |
| FB-6-9-22 | 8260B | Toluene | 0.32 µg/L |
| EB-6-14-22 | 8015D | TPH DRO | 0.035 mg/L |
| EB-6-14-22 | 8260B | Chloromethane | 0.67 µg/L |
| EB-6-14-22 | 8260B | Methylene Chloride | 0.92 µg/L |
| EB-6-14-22 | 200.7 | Dissolved Zinc | 0.0058 mg/L |

Detections of the identified analytes in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of toluene and dissolved zinc in the associated samples that were greater than the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

The TPH DRO results in batch 68185 were previously qualified due to laboratory blank contamination; therefore, additional qualification based on the equipment blank detection was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples. Sample DUP-6-9-22 was collected as a field duplicate of sample East LDU.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exceptions.

An RPD value could not be calculated for total zinc for the field duplicate pair LDU-East and DUP-6-9-22 since the analyte was detected in the duplicate sample and was undetected in the parent sample. As the detection in the duplicate sample was greater than two times the reporting limit, total zinc was qualified as J and UJ for the duplicate and parent samples, respectively.

The RPD value for methylene chloride greatly exceeded the data validation limit of 30% at 156.3%. The methylene chloride results were qualified as J for the parent and duplicate samples, LDU-East and DUP-6-9-22, as well as the remaining associated samples based on evidence of extremely poor precision (RPD > 100%).

VALIDATION CRITERIA CHECKLIST

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? N/A

Comments: A laboratory duplicate was prepared for the analysis of total cyanide in batch WG1883737 from a sample not associated with this data set.

The RPD values for the laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? N/A

Comments: Target analytes were not reported by more than one method in this data set.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results. The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
|------------------|----------------|----------------------------|--------------------------------|
| DUP-6-9-22 | Arsenic | ND | 0.00081 |
| PW-4 | Selenium | ND | 0.00070 |
| PW-3 | Silver | ND | 0.0058 |
| PW-4 | Silver | ND | 0.0050 |
| PW-3 | Vanadium | ND | 0.0019 |
| EB-6-14-22 | Zinc | ND | 0.0058 |
| PW-4 | Zinc | ND | 0.0096 |
| East LDU | Zinc | ND | 0.12 |
| West LDU | Zinc | ND | 0.064 |

FIELD DUPLICATE SUMMARY

| Client Sample ID: East LDU
Field Duplicate Sample ID: DUP-6-9-22 | | | | |
|---|----------------|------------------------|------------------|-----------------------------------|
| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |

| Xylenes, Total | SW8260B | 14 µg/L | 14 µg/L | 0.0% |
| 1,4-Dioxane | SW8270C | 0.40 µg/L | 1.4 µg/L | 111.1% +/-RL |
| 1-Methylnaphthalene | SW8270C | 0.48 µg/L | 0.34 µg/L | 34.1% +/-RL |

| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
|--------------|---------|-------------------|------------------|-----------------------------------|
| Acenaphthene | SW8270C | 0.64 µg/L | 0.68 µg/L | 6.1% |
| Anthracene | SW8270C | 0.46 µg/L | 0.52 µg/L | 12.2% +/-RL |
| Fluoranthene | SW8270C | 0.68 µg/L | 0.76 µg/L | 11.1% |
| Fluorene | SW8270C | 1.2 µg/L | 1.3 µg/L | 8.0% |
| Phenanthrene | SW8270C | 2.2 µg/L | 2.5 µg/L | 12.8% |
| Pyrene | SW8270C | ND (1.0 µg/L) | 0.34 µg/L | DL |

Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

An RPD value could not be calculated for total zinc for the field duplicate pair LDU-East and DUP-6-9-22 since the analyte was detected in the duplicate sample and was undetected in the parent sample. As the detection in the duplicate sample was greater than two times the reporting limit, total zinc was qualified as J and UJ for the duplicate and parent samples, respectively.

The RPD value for methylene chloride greatly exceeded the data validation limit of 30% at 156.3%. The methylene chloride results were qualified as J for the parent and duplicate samples, LDU-East and DUP-6-9-22, as well as the remaining associated samples based on evidence of extremely poor precision (RPD > 100%).

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|--|
| MBD | Method blank detection |
| LR-MS | The MS and/or MSD percent recovery was less than the lower acceptable limit indicating possible matrix interference. |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-LCS | The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| ERPD-LCS | The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision. |
| HR-SUR | The surrogate percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-SUR | The surrogate percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| FBD | Field blank detection |
| EBD | Equipment blank detection |
| TBD | Trip blank detection |
| ERPD-FD | High field duplicate RPD. |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |

| Analyte | Method | Field Sample ID | Lab Sample ID | Result | Limit | Units | Reviewer Qualifier | DV Flag Reasons |

| Data Validator: Daran O'Hollearn, Lead Project Scientist | |
| Reviewer: Mike Phillips, Senior Chemist | |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace National of Mount Juliet, Tennessee, evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-6-15-22 | 2206866-001 |
| OW-1 | 2206866-002 |
| OW-54 | 2206866-003 |
| OW-66 | 2206866-004 |
| OW-55 | 2206866-005 |
| OW-56 | 2206866-006 |
| OW-59 | 2206866-007 |
| DUP-6-15-22 | 2206866-008 |
| FB-6-15-22 | 2206866-009 |
| Trip Blank | 2206866-010 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ⊗ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 630 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformances related to this data set.

Method 8270C: Sample OW-59 had poor surrogate recoveries due to the emulsive nature of the sample.

Naphthalene, 1-methylnaphthalene and 2-methylnaphthalene may be reported by either EPA Method 8270 or EPA Method 8270 SIM, depending which method needs the least dilution. In this report naphthalene, 1-methylnaphthalene and 2-methylnaphthalene were reported by EPA Method 8270 instead of EPA Method 8270 SIM for samples OW-66 and OW-55.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No

If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

D – Sample diluted due to matrix.

J – Analyte detected below quantitation limits.

J6 – The sample matrix interfered with the ability to make any accurate determination; spike value is low.

P1 – RPD value not applicable for sample concentrations less than 5 times the reporting limit.

R – RPD value outside of range.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present because the samples were transferred to a laboratory field courier service for transport from the field to the laboratory, and custody was maintained at all times.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| Method | Sample(s) | Analyte(s) | Dilution Factor |
|--------|------------------|-----------------------------------|-----------------|
| 200.7 | OW-66 | Total and Dissolved Barium | 5 |
| 200.7 | OW-59 | Total Metals | 5 |
| 200.8 | Multiple Samples | Select Total and Dissolved Metals | 5 |
| 8015D | OW-54 | TPH GRO | 5 |
| 8260B | OW-54 | VOCs | 5 |
| 200.8 | OW-59 | Total Metals | 10 |
| 8015D | OW-66, OW-55 | TPH DRO and TPH MRO | 10 |
| 8260B | EB-6-15-22 | Methylene Chloride | 10 |
| 8015D | OW-66, OW-55 | TPH GRO | 50 |
| 8260B | OW-54 | MTBE | 50 |
| 8260B | OW-66, OW-55 | Select VOCs | 50 |
| 8260B | OW-66 | Benzene, Toluene | 500 |
| 8260B | OW-55 | Benzene | 500 |

| VALIDATION CRITERIA CHECKLIST | |
|---|-----|
| 5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? | No |
| <p>Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.</p> <p>The CoC requested total and dissolved metals using Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> <p>The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> | |
| 6. Were samples received in good condition within method-specified requirements? | No |
| <p>Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ between 1.5°C and 5.1°C as noted on the CoC and the <i>Sample Log-in Check List</i>. Samples transferred to Pace National were received in good condition with the cooler temperature below the recommended range at 1.8°C as noted on the CoC. The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen.</p> | |
| 7. Were samples extracted/digested and analyzed within method-specified or technical holding times? | Yes |
| <p>Comments: The samples were extracted/digested and analyzed within method-specific holding times.</p> | |
| 8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. | Yes |
| <p>Comments: The results were reported in concentration units of micrograms per liter ($\mu\text{g/L}$) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.</p> | |
| 9. Did the laboratory provide any specific initial and/or continuing calibration results? | No |
| <p>Comments: Initial and continuing calibration data were not included as part of this data set.</p> | |
| 10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? | N/A |
| <p>Comments: Initial and continuing calibration data were not included as part of this data set.</p> | |
| 11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | Yes |
| <p>Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.</p> | |
| 12. Were target analytes reported as not detected in the laboratory blanks? | No |
| <p>Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exception.</p> <p>TPH DRO was detected in the laboratory blank for Method 8015D batch 68185 at a concentration of 0.018 mg/L. The samples EB-6-15-22 and OW-1 TPH DRO results detected below the laboratory reporting limit were qualified with U flags. Non-detections of this analyte in the associated samples and results greater than ten times the blank concentration did not require qualification.</p> | |

VALIDATION CRITERIA CHECKLIST

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| Method | Analytes | Batch | MS Sample Source |
|---------------------|-----------------------------|-----------|----------------------------|
| 200.7 | Total Metals | 68172 | Not Prepared |
| 200.7 | Dissolved Metals | B88897 | EB-6-15-22 |
| 200.8 | Total Metals | 68172 | DUP-6-15-22 |
| 200.8 | Dissolved Metals | B88918 | Not Prepared |
| 200.8 | Dissolved Metals | D88918 | Not Prepared |
| 245.1 | Total and Dissolved Mercury | 68219 | Not Prepared |
| 504.1 | EDB | 68190 | Trip Blank |
| 4500CN E | Cyanide | WG1884563 | Not Associated, EB-6-15-22 |
| 4500CN E | Cyanide | WG1885513 | Not Associated |
| 8015D | TPH DRO and MRO | 68185 | Not Prepared |
| 8015D | TPH GRO | G88994 | Not Prepared |
| 8260B | VOCs | R89027 | EB-6-15-22 |
| 8260B | VOCs | W89041 | Not Prepared |
| 8270C and 8270C SIM | SVOCs | 68202 | Not Prepared |
| 8270C and 8270C SIM | SVOCs | 68218 | Not Prepared |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? No

Comments: The percent recoveries and RPDs for MS/MSDs prepared from project samples were within data validation and laboratory QC limits, with the following exceptions.

The MSD recovery for total selenium in Method 200.8 batch 68172 was outside the QC limits of 75-125% at 127%. Detections in the associated samples were qualified as J+ due to potential high bias. Non-detections in the associated samples did not require qualification due to this non-conformance.

The MS/MSD RPD value for EDB in Method 504.1 batch 68190 was outside the QC limit of 20% at 22.9%. EDB was not detected in the associated samples. These EDB results were qualified as UJ due to evidence of poor precision.

The percent recoveries and RPD values for MS/MSDs prepared from non-project samples were evaluated and considered, but data were not qualified based on those results since matrix similarity to project samples could not be guaranteed.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

VALIDATION CRITERIA CHECKLIST

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits?

No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits | LCS/LCSD RPD | RPD QC Limits |
|-----------|------------------------|-------|--------------|---------------|--------------------|--------------|---------------|
| 200.7 | Total Barium | 68172 | 137% | ----- | 70-130% | ----- | ----- |
| 8015D | TPH DRO | 68185 | 92.4% | 90.2% | 31.7-75.4% | Acceptable | 20% |
| 8270C | 1,4-Dichlorobenzene | 68202 | Acceptable | Acceptable | 15-89.8% | 47.0% | 39.6% |
| 8270C | Phenol | 68202 | Acceptable | Acceptable | 17-61.1% | 52.4% | 42.5% |
| 8270C | Pyrene | 68202 | Acceptable | Acceptable | 61-123% | 28.9% | 11.8% |
| 8270C SIM | 1-Methylnaphthalene | 68218 | 82.0% | Acceptable | 22.2-80.3% | Acceptable | 25% |
| 8270C SIM | 2-Methylnaphthalene | 68218 | 85.0% | Acceptable | 20.6-80.1% | Acceptable | 25% |
| 8270C SIM | Fluorene | 68218 | 93.0% | 88.0% | 33.3-86% | Acceptable | 26.4% |
| 8270C SIM | Phenanthrene | 68218 | 94.0% | Acceptable | 38.2-93.9% | Acceptable | 27.9% |
| 8270C SIM | Anthracene | 68218 | 127% | 102% | 41.1-95.6% | Acceptable | 25.6% |
| 8270C SIM | Fluoranthene | 68218 | 158% | Acceptable | 52.9-123% | Acceptable | 22.8% |
| 8270C SIM | Benzo(a)anthracene | 68218 | 170% | Acceptable | 51-147% | 33.1% | 24.1% |
| 8270C SIM | Benzo(b)fluoranthene | 68218 | Acceptable | Acceptable | 44.4-136% | 28.6% | 24.5% |
| 8270C SIM | Indeno(1,2,3-cd)pyrene | 68218 | Acceptable | 166% | 31.4-165% | 59.4% | 21.1% |

Analytes with LCS and/or LCSD recoveries greater than the laboratory or data validation QC limits were detected in the associated samples, and the results were qualified as J+ to indicate estimated concentrations that may be biased high. Non-detections of these analytes in the associated samples did not require qualification.

The analytes with LCS/LCSD RPD values that were above the QC limit were qualified as J for detections and UJ for non-detections for the associated samples due to evidence of poor precision.

17. Were surrogate recoveries within laboratory QC limits?

No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

| Method | Surrogate | Sample | Surrogate Recovery | QC Limits |
|-----------|-----------------------------|--------|--------------------|------------|
| 8270C SIM | 4-Terphenyl-d ₁₄ | OW-54 | 70.2% | 72.3-147% |
| 8270C | 2-Fluorophenol | OW-66 | 0% | 29.4-87.7% |
| 8270C SIM | 4-Terphenyl-d ₁₄ | OW-66 | 71.3% | 72.3-147% |
| 8270C SIM | 4-Terphenyl-d ₁₄ | OW-55 | 71.4% | 72.3-147% |
| 8015D | BFB | OW-56 | 1,240% | 70-130% |
| 8270C SIM | 4-Terphenyl-d ₁₄ | OW-56 | 71.9% | 72.3-147% |
| 8015D | BFB | OW-59 | 6,400% | 70-130% |
| 8270C | 2-Fluorophenol | OW-59 | 27.8% | 29.4-87.7% |
| 8270C | 2,4,6-Tribromophenol | OW-59 | 12.1% | 18.6-129% |

Since Method 8270C and Method 8270C SIM surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the samples OW-54, OW-66, OW-55, and OW-56, and qualification of sample data was not required.

VALIDATION CRITERIA CHECKLIST

The associated target analytes in sample OW-59 with surrogate recoveries that were less than the lower laboratory QC limits were not detected in sample OW-59, and these results were qualified as UJ due to evidence of potential low bias.

TPH GRO was detected in samples OW-56 and OW-59, and these TPH GRO results were qualified as J+ due to evidence of potential high bias.

The TPH DRO and TPH MRO results for samples OW-66 and OW-55 were not qualified based on the surrogate non-conformances in the Method 8015D analyses since the applied dilutions of 10 times resulted in surrogate concentrations below routinely calibrated levels, and those results were deemed unreliable and possibly inaccurate.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample FB-6-15-22, and one equipment blank sample, EB 6-15-22, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| Blank Sample ID | Method | Analyte | Concentration |
|-----------------|--------|--------------------|---------------|
| FB-6-15-22 | 8260B | Acetone | 4.2 µg/L |
| EB-6-15-22 | 8260B | Acetone | 3.4 µg/L |
| EB-6-15-22 | 8260B | Methylene Chloride | 8.5 µg/L |
| EB-6-15-22 | 8015 | TPH DRO | 0.019 mg/L |
| EB-6-15-22 | 200.7 | Dissolved Zinc | 0.0054 mg/L |

Detections of acetone and dissolved zinc in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of dissolved zinc in the associated samples that were greater than the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples did not require qualification.

The TPH DRO results in batch 68185 were previously qualified due to laboratory blank contamination; therefore, additional qualification due to the equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples. Sample DUP-6-15-22 was collected as a field duplicate of sample OW-01.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exception.

The RPD value for dissolved zinc exceeded the data validation limit of 30% at 82.4%, which was evidence of poor precision. The dissolved zinc results were qualified as J for samples OW-1 and DUP-6-15-22.

VALIDATION CRITERIA CHECKLIST

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? N/A

Comments: Laboratory duplicates were prepared for these analyses, and the laboratory duplicate sample sources are summarized in the following table.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>Laboratory Duplicate Sample Source</u> |
|---------------|-----------------|--------------|---|
| 4500CN E | Cyanide | WG1884563 | Not Associated |
| 4500CN E | Cyanide | WG1885513 | Not Associated |

Not Associated – The laboratory duplicate sample source was not associated with this project.

The RPD values for the laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? N/A

Comments: Target analytes were not reported by more than one method in this data set.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results. The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
|------------------|----------------|----------------------------|--------------------------------|
| OW-56 | Selenium | ND | 0.00068 |
| OW-59 | Selenium | ND | 0.0018 |
| OW-54 | Silver | ND | 0.0013 |
| OW-55 | Silver | ND | 0.0018 |
| OW-56 | Silver | ND | 0.0017 |
| OW-59 | Silver | ND | 0.0050 |
| OW-59 | Vanadium | ND | 0.0052 |
| EB-6-15-22 | Zinc | ND | 0.0054 |
| OW-1 | Zinc | ND | 0.048 |
| OW-66 | Zinc | 0.013 | 0.016 |
| OW-55 | Zinc | 0.022 | 0.048 |
| OW-56 | Zinc | 0.0066 | 0.011 |
| OW-59 | Zinc | ND | 0.0062 |
| DUP-6-15-22 | Zinc | ND | 0.020 |

FIELD DUPLICATE SUMMARY

| Client Sample ID: OW-1
Field Duplicate Sample ID: DUP-6-15-22 | | | | |
|--|----------------|-------------------|-------------------|-----------------------------------|
| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
| Barium, Dissolved | E 200.7 | 0.037 mg/L | 0.037 mg/L | 0.0% |
| Barium, Total | E 200.7 | 0.044 mg/L | 0.045 mg/L | 2.2% |
| Chromium, Total | E 200.7 | 0.0045 mg/L | 0.0044 mg/L | 2.2% +/-RL |
| Vanadium, Dissolved | E 200.7 | 0.039 mg/L | 0.038 mg/L | 2.6% +/-RL |
| Vanadium, Total | E 200.7 | 0.043 mg/L | 0.045 mg/L | 4.5% +/-RL |
| Zinc, Dissolved | E 200.7 | 0.048 mg/L | 0.020 mg/L | 82.4% |
| Arsenic, Dissolved | E200.8 | 0.00070 mg/L | 0.00066 mg/L | 5.9% +/-RL |
| Arsenic, Total | E200.8 | 0.00078 mg/L | 0.00074 mg/L | 5.3% +/-RL |
| Lead, Total | E200.8 | 0.00025 mg/L | 0.00024 mg/L | 4.1% +/-RL |
| Selenium, Dissolved | E200.8 | 0.0021 mg/L | 0.0021 mg/L | 0.0% |
| Selenium, Total | E200.8 | 0.0026 mg/L | 0.0023 mg/L | 12.2% |
| TPH DRO | SW8015 | 0.027 mg/L | ND (0.064 mg/L) | DL |
| MTBE | SW8260B | 1.9 µg/L | 2.2 µg/L | 14.6% |
| 1,4-Dioxane | SW8270C | 0.26 µg/L | 0.22 µg/L | 16.7% +/-RL |
| <p>Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.</p> <p>DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).</p> <p>+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.</p> <p>The RPD value for dissolved zinc exceeded the data validation limit of 30% at 82.4%, which was evidence of poor precision. The dissolved zinc results were qualified as J for samples OW-1 and DUP-6-15-22.</p> | | | | |

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| EBD | Equipment blank detection |
| ERPD-FD | High field duplicate RPD. |
| ERPD-LCS | The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision. |
| ERPD-MS | The MS/MSD RPD exceeded the upper acceptable limit indicating poor precision. |
| FBD | Field blank detection |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| HR-MS | The MS and/or MSD percent recovery was greater than the upper acceptable limit indicating possible matrix interference. |
| HR-SUR | The surrogate percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-SUR | The surrogate percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| MBD | Method blank detection |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |

| Analyte | Method | Field Sample ID | Lab Sample ID | Result | Limit | Units | Reviewer Qualifier | DV Flag Reasons |
|------------------------|---------|-----------------|---------------|--------|--------|-------|--------------------|-----------------|
| 1,1-Dichloroethane | SW8260B | OW-56 | 2206866-006a | 0.35 | 1.0 | µg/L | J | MDLRL |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace National of Mount Juliet, Tennessee, evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-6-16-22 | 2206938-001 |
| OW-60 | 2206938-002 |
| OW-68 | 2206938-003 |
| OW-67 | 2206938-004 |
| MKTF-43 | 2206938-005 |
| MKTF-41 | 2206938-006 |
| FB-6-16-22 | 2206938-007 |
| DUP-6-16-22 | 2206938-008 |
| Trip Blank | 2206938-009 |
| MKTF-32 | 2206938-010 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ⊗ Laboratory Qualifiers (Item 2)
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ✓ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| J- | The result is an estimated concentration, but may be biased low |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |
| R | Rejected, data not usable |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 630 data points. The data completeness calculation does not include any submitted blank sample results. Twenty-eight points were rejected. The data completeness measure for this data package is calculated to be 95.56% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformance related to this data set.

Method 8270C: Analytical Notes Regarding sample MKTF-32. The 8270 LCSD had low recoveries for the phenol spikes. The LCS had acceptable recoveries for all compounds.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No

If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

E – Estimated Value. **The target analyte 1,4-dioxane was flagged by the laboratory with the E flag for sample MKTF-32. This result was assigned a J qualifier due to this calibration range non-conformance.**

J – Analyte detected below quantitation limits.

R – RPD value outside of range.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present because the samples were transferred to a laboratory field courier service for transport from the field to the laboratory, and custody was maintained at all times.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| <u>Method</u> | <u>Sample(s)</u> | <u>Analyte(s)</u> | <u>Dilution Factor</u> |
|---------------|-----------------------------|-----------------------------------|------------------------|

| VALIDATION CRITERIA CHECKLIST | |
|--|-----|
| 5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? | No |
| <p>Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.</p> <p>The CoC requested total and dissolved metals using Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> <p>The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> | |
| 6. Were samples received in good condition within method-specified requirements? | No |
| <p>Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ between 1.0°C and 4.7°C as noted on the CoC and the <i>Sample Log-in Check List</i>. Samples transferred to Pace National were received in good condition with the cooler temperature both within and outside the recommended range at 1.0°C and 2.1°C as noted on the CoC. The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen.</p> | |
| 7. Were samples extracted/digested and analyzed within method-specified or technical holding times? | Yes |
| <p>Comments: The samples were extracted/digested and analyzed within method-specific holding times.</p> | |
| 8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. | Yes |
| <p>Comments: The results were reported in concentration units of micrograms per liter ($\mu\text{g/L}$) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.</p> | |
| 9. Did the laboratory provide any specific initial and/or continuing calibration results? | No |
| <p>Comments: Initial and continuing calibration data were not included as part of this data set.</p> | |
| 10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? | N/A |
| <p>Comments: Initial and continuing calibration data were not included as part of this data set.</p> | |
| 11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | Yes |
| <p>Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.</p> | |
| 12. Were target analytes reported as not detected in the laboratory blanks? | No |
| <p>Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.</p> <p>TPH DRO was detected in the laboratory blank for Method 8015D batch 68262 at a concentration of 0.019 mg/L. The sample EB-6-16-22 TPH DRO result detected below the laboratory reporting limit was qualified with a U flag. Results greater than the blank detection and/or the laboratory reporting limit but less than 10 times the blank concentration were qualified with a JB flag. Detections of this analyte in the associated samples greater than ten times the blank concentration did not require qualification.</p> <p>Pyrene was detected in the laboratory blank for Method 8270C SIM batch 68278 at a concentration of $0.36 \mu\text{g/L}$. The non-detection of this analyte in the associated sample MKTF-32 did not require qualification.</p> | |

VALIDATION CRITERIA CHECKLIST

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>MS Sample Source</u> |
|---------------------|-----------------------------|--------------|-------------------------|
| 200.7 | Total Metals | 68213 | Not Prepared |
| 200.7 | Total Metals | 68301 | Not Prepared |
| 200.7 | Dissolved Metals | A88936 | Not Prepared |
| 200.7 | Dissolved Metals | C88897 | EB-6-16-22 |
| 200.8 | Total Metals | 68213 | Not Prepared |
| 200.8 | Total Metals | 68301 | Not Prepared |
| 200.8 | Dissolved Metals | A88981 | Not Prepared |
| 200.8 | Dissolved Metals | C88918 | Not Prepared |
| 245.1 | Total and Dissolved Mercury | 68220 | EB-6-16-22 |
| 245.1 | Total Mercury | 68247 | Not Prepared |
| 245.1 | Dissolved Mercury | 68304 | Not Prepared |
| 504.1 | EDB | 68190 | Not Prepared |
| 504.1 | EDB | 68319 | Not Prepared |
| 4500CN E | Cyanide | WG1886384 | OW-68, DUP-6-16-22 |
| 4500CN E | Cyanide | WG1886402 | Not Associated |
| 8015D | TPH DRO and MRO | 68262 | Not Prepared |
| 8015D | TPH GRO | A89029 | MKTF-41 |
| 8015D | TPH GRO | G88994 | Not Prepared |
| 8260B | VOCs | R89017 | Not Prepared |
| 8270C and 8270C SIM | SVOCs | 68218 | Not Prepared |
| 8270C and 8270C SIM | SVOCs | 68278 | Not Prepared |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The percent recoveries and RPDs for MS/MSDs prepared from project samples were within data validation and laboratory QC limits.

The percent recoveries and RPD values for MS/MSDs prepared from non-project samples were evaluated and considered, but data were not qualified based on those results since matrix similarity to project samples could not be guaranteed.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

VALIDATION CRITERIA CHECKLIST

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits?

No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits | LCS/LCSD RPD | RPD QC Limits |
|-----------|------------------------|--------|--------------|---------------|--------------------|--------------|---------------|
| 200.7 | Total Nickel | 68213 | 53.3% | ----- | 70-130% | ----- | ----- |
| 200.7 | Total Zinc | 68301 | 137% | ----- | 70-130% | ----- | ----- |
| 200.7 | Dissolved Cadmium | A88936 | 138% | ----- | 70-130% | ----- | ----- |
| 504.1 | EDB | 68319 | Acceptable | Acceptable | 70-130% | 21.9% | 20% |
| 8270C | Phenol | 68278 | Acceptable | Acceptable | 17-61.1% | 91.3% | 42.5% |
| 8270C SIM | 1-Methylnaphthalene | 68218 | 82.0% | Acceptable | 22.2-80.3% | Acceptable | 25% |
| 8270C SIM | 2-Methylnaphthalene | 68218 | 85.0% | Acceptable | 20.6-80.1% | Acceptable | 25% |
| 8270C SIM | Fluorene | 68218 | 93.0% | 88.0% | 33.3-86% | Acceptable | 26.4% |
| 8270C SIM | Phenanthrene | 68218 | 94.0% | Acceptable | 38.2-93.9% | Acceptable | 27.9% |
| 8270C SIM | Anthracene | 68218 | 127% | 102% | 41.1-95.6% | Acceptable | 25.6% |
| 8270C SIM | Fluoranthene | 68218 | 158% | Acceptable | 52.9-123% | Acceptable | 22.8% |
| 8270C SIM | Benzo(a)anthracene | 68218 | 170% | Acceptable | 51-147% | 33.1% | 24.1% |
| 8270C SIM | Benzo(b)fluoranthene | 68218 | Acceptable | Acceptable | 44.4-136% | 28.6% | 24.5% |
| 8270C SIM | Indeno(1,2,3-cd)pyrene | 68218 | Acceptable | 166% | 31.4-165% | 59.4% | 21.1% |
| 8270C SIM | 1,4-Dioxane | 68278 | 53.0% | 49.0% | 20.2-48.4% | Acceptable | 30.1% |
| 8270C SIM | Acenaphthene | 68278 | 85.0% | Acceptable | 29.8-82.7% | Acceptable | 27.8% |
| 8270C SIM | Fluorene | 68278 | 88.0% | Acceptable | 33.3-86% | Acceptable | 26.4% |
| 8270C SIM | Phenanthrene | 68278 | 96.0% | Acceptable | 38.2-93.9% | Acceptable | 27.9% |
| 8270 SIM | Fluoranthene | 68278 | Acceptable | Acceptable | 52.9-123% | 24.6% | 22.8% |

Total nickel with a MS percent recovery that was less than the lower laboratory QC limit was qualified as J- if detected and UJ if not detected in the associated samples due to evidence of potential low bias.

Analytes with LCS and/or LCSD recoveries greater than the laboratory or data validation QC limits were detected in the associated samples, and the results were qualified as J+ to indicate estimated concentrations that may be biased high. Non-detections of these analytes in the associated samples did not require qualification.

The analytes with LCS/LCSD RPD values that were above the QC limit were not detected in the associated samples. These results were qualified UJ due to evidence of poor precision.

17. Were surrogate recoveries within laboratory QC limits?

No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

| Method | Surrogate | Sample | Surrogate Recovery | QC Limits |
|--------|-----------------------|--------|--------------------|------------|
| 8015D | BFB | OW-60 | 145% | 70-130% |
| 8015D | BFB | OW-68 | 3,120% | 70-130% |
| 8270C | 2-Fluorophenol | OW-68 | 2.09% | 29.4-87.7% |
| 8270C | Phenol-d ₅ | OW-68 | 10.4% | 28.5-64.7% |
| 8270C | 2,4,6-Tribromophenol | OW-68 | 2.60% | 18.6-129% |
| 8015D | BFB | OW-67 | 1,310% | 70-130% |

VALIDATION CRITERIA CHECKLIST

| Method | Surrogate | Sample | Surrogate Recovery | QC Limits |
|--------|-----------------------------|-------------|--------------------|------------|
| 8270C | 2-Fluorophenol | OW-67 | 1.47% | 29.4-87.7% |
| 8270C | Phenol-d ₅ | OW-67 | 9.05% | 28.5-64.7% |
| 8270C | 2,4,6-Tribromophenol | OW-67 | 0.0% | 18.6-129% |
| 8270C | 2-Fluorophenol | MKTF-43 | 1.31% | 29.4-87.7% |
| 8270C | Phenol-d ₅ | MKTF-43 | 8.24% | 28.5-64.7% |
| 8270C | 2,4,6-Tribromophenol | MKTF-43 | 2.35% | 18.6-129% |
| 8270C | 2-Fluorophenol | MKTF-41 | 6.97% | 29.4-87.7% |
| 8270C | Phenol-d ₅ | MKTF-41 | 15.1% | 28.5-64.7% |
| 8270C | 2,4,6-Tribromophenol | MKTF-41 | 11.4% | 18.6-129% |
| 8270C | Nitrobenzene-d ₅ | MKTF-41 | 32.5% | 36.9-103% |
| 8270C | 2-Fluorobiphenyl | MKTF-41 | 31.5% | 38.1-99.9% |
| 8270C | 2-Fluorophenol | DUP-6-16-22 | 1.27% | 29.4-87.7% |
| 8270C | Phenol-d ₅ | DUP-6-16-22 | 7.83% | 28.5-64.7% |
| 8270C | 2,4,6-Tribromophenol | DUP-6-16-22 | 2.30% | 18.6-129% |

Since Method 8270C and Method 8270C SIM surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the sample OW-60 Method 8270C analysis and the sample MKTF-41 Method 8270C SIM analysis, and qualification of sample data was not required.

The Method 8270C associated target analytes in samples OW-68, OW-67, MKTF-43, and DUP-6-16-22 with surrogate recoveries that were less than the lower laboratory QC limits, and 2 of 3 surrogate recoveries below 10%, were not detected in samples OW-68, OW-67, MKTF-43, and DUP-6-16-22. These results were qualified with R in the associated samples to indicate rejected (not usable) data based on evidence of extreme low bias (recovery less than 10%).

The Method 8270C associated target analyte in sample MKTF-41 with surrogate recoveries that were less than the lower laboratory QC limits were not detected in sample MKTF-41, and these results were qualified with UJ due to evidence of potential low bias.

TPH GRO was detected in samples OW-68 and OW-67, and these TPH GRO results were qualified as J+ due to evidence of potential high bias. TPH GRO was not detected in sample OW-60, and qualification of data was not required.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample FB-6-16-22, and one equipment blank sample, EB 6-16-22, were collected as part of this sample set.

VALIDATION CRITERIA CHECKLIST

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration</u> |
|------------------------|---------------|------------------------|----------------------|
| Trip Blank | 8260B | 1,2,3-Trichlorobenzene | 0.25 µg/L |
| Trip Blank | 8260B | 1-Methylnaphthalene | 1.0 µg/L |
| Trip Blank | 8260B | 2-Methylnaphthalene | 1.0 µg/L |
| Trip Blank | 8260B | Acetone | 2.7 µg/L |
| Trip Blank | 8260B | Styrene | 0.14 µg/L |
| FB-6-16-22 | 8260B | Acetone | 3.6 µg/L |
| FB-6-16-22 | 8260B | Toluene | 0.24 µg/L |
| EB-6-16-22 | 200.7 | Dissolved Zinc | 0.0058 mg/L |
| EB-6-16-22 | 200.8 | Total Lead | 0.000065 mg/L |
| EB-6-16-22 | 8015D | TPH DRO | 0.039 mg/L |
| EB-6-16-22 | 8260B | Acetone | 3.4 µg/L |
| EB-6-16-22 | 8260B | Toluene | 0.43 µg/L |
| EB-6-16-22 | 8260B | Total Xylenes | 0.41 µg/L |

Detections of the identified analytes in the associated samples that were less than or equal to the blank results and/or less than or equal to the applicable reporting limits were assigned U qualifiers. Detections of dissolved zinc and total xylenes in the associated samples that were greater than the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of these analytes in the associated samples and results greater than 10 times the blank detection did not require qualification.

The analytes 1,2,3-trichlorobenzene, 1-methylnaphthalene, and 2-methylnaphthalene were only reported in the trip blank sample, Trip Blank, or analyzed and reported by Method 8270C SIM. Qualification was not required.

The TPH DRO results in batch 68262 were previously qualified due to laboratory blank contamination; therefore, additional qualification due to the equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples. Sample DUP-6-16-22 was collected as a field duplicate of sample MKTF-43.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? Yes

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples.

22. For laboratory duplicates prepared from project samples, were RPDs within laboratory QC limits? Yes

Comments: Laboratory duplicates were prepared for these analyses, and the laboratory duplicate sample sources are summarized in the following table.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>Laboratory Duplicate Sample Source</u> |
|---------------|-----------------|--------------|---|
| 4500CN E | Cyanide | WG1886384 | EB-6-16-22 |

VALIDATION CRITERIA CHECKLIST

| Method | Analytes | Batch | Laboratory Duplicate
Sample Source |
|----------|----------|-----------|---------------------------------------|
| 4500CN E | Cyanide | WG1886384 | OW-67 |
| 4500CN E | Cyanide | WG1886402 | Not Associated |

Not Associated – The laboratory duplicate sample source was not associated with this project.

The RPDs for laboratory duplicates prepared from project samples were within laboratory acceptance limits or were not applicable since the results for one or both measurements were within 5 times the reporting limit.

The RPD values for the laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? N/A

Comments: Target analytes were not reported by more than one method in this data set.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results. The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

| Sample ID | Analyte | Total Result
(mg/L) | Dissolved Result
(mg/L) |
|-------------|----------|------------------------|----------------------------|
| OW-68 | Cadmium | ND | 0.0020 mg/L |
| MKTF-43 | Nickel | ND | 0.0064 mg/L |
| DUP-6-16-22 | Nickel | ND | 0.0042 mg/L |
| MKTF-32 | Nickel | ND | 0.0038 mg/L |
| OW-60 | Silver | ND | 0.0029 mg/L |
| OW-68 | Silver | ND | 0.011 mg/L |
| OW-67 | Silver | ND | 0.020 mg/L |
| MKTF-43 | Silver | ND | 0.037 mg/L |
| DUP-6-16-22 | Silver | ND | 0.035 mg/L |
| MKTF-43 | Vanadium | ND | 0.0067 mg/L |
| DUP-6-16-22 | Vanadium | ND | 0.0057 mg/L |
| EB-6-16-22 | Zinc | ND | 0.0058 mg/L |

FIELD DUPLICATE SUMMARY

| Client Sample ID: MKTF-43
Field Duplicate Sample ID: DUP-6-16-22 | | | | |

| TPH DRO | SW8015 | 0.15 mg/L | 0.15 mg/L | 0.0% |
| <p>Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.</p> <p>+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.</p> | | | | |

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| EBD | Equipment blank detection |
| ECAL | The result exceeds the calibration range. |
| ERPD-LCS | The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision. |
| FBD | Field blank detection |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| HR-SUR | The surrogate percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-LCS | The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| LR-SUR | The surrogate percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |
| MBD | Method blank detection |
| TBD | Trip blank detection |

| Analyte | Method | Field Sample ID | Lab Sample ID | Result | Limit | Units | Reviewer Qualifier | DV Flag Reasons |
|------------------------|---------|-----------------|---------------|--------|--------|-------|--------------------|-----------------|

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-6-30-22 | 2207002-001 |
| OW-14 | 2207002-002 |
| OW-30 | 2207002-003 |
| DUP-6-30-22 | 2207002-004 |
| FB-6-30-22 | 2207002-005 |
| Trip Blank | 2207002-006 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ✓ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| J- | The result is an estimated concentration, but may be biased low |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 270 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? Yes

Comments: The laboratory did not report non-conformances related to the analytical data for this sample set.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

D – Sample diluted due to matrix.

J – Analyte detected below quantitation limits.

J6 – The sample matrix interfered with the ability to make any accurate determination; spike value is low.

P1 – RPD value not applicable for sample concentrations less than 5 times the reporting limit.

R – % RPD outside of range.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? No

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present because the samples were transferred to a laboratory field courier service for transport from the field to the laboratory, and custody was maintained at all times.

The analyses required for sample Trip Blank were not identified on the CoC for this sample set. The laboratory assigned and completed the appropriate analyses for this sample type. Further validation action was not required.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| Method | Sample(s) | Analyte(s) | Dilution Factor |
|--------|--------------------|----------------------------|-----------------|
| 200.7 | OW-14, DUP-6-30-22 | Total and Dissolved Barium | 5 |
| 8260B | OW-30 | Select VOCs | 5 |
| 8015D | OW-14, DUP-6-30-22 | TPH GRO | 20 |
| 8260B | OW-14, DUP-6-30-22 | Select VOCs | 50 |
| 8260B | OW-30 | MTBE | 50 |
| 8260B | OW-14, DUP-6-30-22 | Benzene | 500 |

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? No

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.

The CoC requested total and dissolved metals using only Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

VALIDATION CRITERIA CHECKLIST

6. Were samples received in good condition within method-specified requirements?

No

Comments: Samples were received on ice, in good condition, and with the cooler temperatures within the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ at 2.2°C and 2.3°C as noted on the CoC and the Sample Log-in Check List. Samples transferred to Pace National were received in good condition with the cooler temperature outside the recommended range at 0.4°C as noted on the CoC.

The cooler temperature below 2.0°C was judged as acceptable since the laboratory did not report the sample containers as broken or frozen.

7. Were samples extracted/digested and analyzed within method-specified or technical holding times?

Yes

Comments: The samples were extracted/digested and analyzed within method-specific holding times.

8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil.

Yes

Comments: The results were reported in concentration units of micrograms per liter ($\mu\text{g/L}$) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.

9. Did the laboratory provide any specific initial and/or continuing calibration results?

No

Comments: Initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits?

N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method?

Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

12. Were target analytes reported as not detected in the laboratory blanks?

No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

TPH DRO was detected in the laboratory blank for Method 8015D batch 68572 at a concentration of 0.022 mg/L. TPH DRO was detected in the associated sample EB-6-30-22 at a concentration less than the laboratory reporting limit and the result was qualified with a U flag. TPH DRO was detected in the associated samples at concentrations above the reporting limit and greater than ten times the blank concentration and the results did not require qualification.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method?

Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| Method | Analytes | Batch | MS Sample Source |
|----------|-----------------------------|-----------|------------------|
| 200.7 | Total Metals | 68545 | EB-6-30-22 |
| 200.7 | Dissolved Metals | B89290 | EB-6-30-22 |
| 200.8 | Total Metals | 68545 | OW-14 |
| 200.8 | Dissolved Metals | A89215 | Not Prepared |
| 245.1 | Total and Dissolved Mercury | 68567 | Not Prepared |
| 504.1 | EDB | 68566 | Not Prepared |
| 4500CN E | Cyanide | WG1893803 | Not Associated |

VALIDATION CRITERIA CHECKLIST

| Method | Analytes | Batch | MS Sample Source |
|-----------|-----------------|--------|------------------|
| 8015D | TPH DRO and MRO | 68572 | Not Prepared |
| 8015D | TPH GRO | G89271 | Not Prepared |
| 8260B | VOCs | R89347 | Not Prepared |
| 8270C SIM | SVOCs | 68563 | Not Prepared |
| 8270C | SVOCs | 68563 | Not Prepared |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The percent recoveries and RPDs for MS/MSD prepared from project samples were within data validation and laboratory QC limits.

The percent recoveries and RPD values for MS/MSDs prepared from non-project samples were evaluated and considered, but data were not qualified based on those results since matrix similarity to project samples could not be guaranteed.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits | LCS/LCSD RPD | RPD QC Limits |
|-----------|--------------|-------|--------------|---------------|--------------------|--------------|---------------|
| 200.7 | Total Nickel | 68545 | 132% | ----- | 70-130% | ----- | ----- |
| 8015D | TPH DRO | 68572 | 77.8% | Acceptable | 31.7-75.4% | 25.5% | 20% |
| 8270C | Pyrene | 68563 | 60.3% | 57.4% | 61-123% | Acceptable | 11.8% |
| 8270C SIM | 1,4-Dioxane | 68563 | 51.0% | 53.0% | 20.2-48.4% | Acceptable | 30.1% |
| 8270C SIM | Acenaphthene | 68563 | Acceptable | 83.0% | 29.8-82.7% | Acceptable | 27.8% |
| 8270C SIM | Fluorene | 68563 | Acceptable | 87.0% | 33.3-86% | Acceptable | 26.4% |
| 8270C SIM | Phenanthrene | 68563 | Acceptable | 94.0% | 38.2-93.9% | Acceptable | 27.9% |

Pyrene was detected in sample EB-6-30-22 and the result was qualified as J- due to evidence of potential low bias. Pyrene was not detected in the remaining associated samples and the results were assigned UJ qualifiers.

Detections of the remaining identified analytes in the associated samples were qualified as J+ due to evidence of potential high bias. Non-detection of these analytes in the associated samples did not require qualification.

TPD DRO was detected in the associated samples and the results were qualified as J due to evidence of poor precision.

VALIDATION CRITERIA CHECKLIST

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

| Method | Surrogate | Sample | Surrogate Recovery | QC Limits |
|-----------|-----------------------------|-------------|--------------------|------------|
| 8270C | 2-Fluorophenol | EB-6-30-22 | 24.7% | 29.4-87.7% |
| 8270C | Phenol-d ₅ | EB-6-30-22 | 18.1% | 28.5-64.7% |
| 8270C | Nitrobenzene-d ₅ | EB-6-30-22 | 33.1% | 36.9-103% |
| 8270C | 2-Fluorobiphenyl | EB-6-30-22 | 32.2% | 38.1-99.9% |
| 8270C | 4-Terphenyl-d ₁₄ | EB-6-30-22 | 47.0% | 48-155% |
| 8270C-SIM | 4-Terphenyl-d ₁₄ | EB-6-30-22 | 48.8% | 72.3-147% |
| 8270C-SIM | 4-Terphenyl-d ₁₄ | OW-30 | 67.2% | 72.3-147% |
| 8270C-SIM | 4-Terphenyl-d ₁₄ | DUP-6-30-22 | 67.6% | 72.3-147% |

Since Method 8270C and 8270C-SIM surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the Method 8270C-SIM analyses of samples EB-6-30-22, OW-30, and DUP-6-30-22, and qualification of sample data was not required. **Di-n-butyl phthalate was detected in the Method 8270C analysis of sample EB-6-30-22, and this result was qualified as J- due to evidence of potential low bias. The remaining Method 8270C SVOC analytes were not detected in sample EB-6-30-22, and these results were qualified as UJ due to the evidence of potential low bias.**

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB 6-30-22, and one equipment blank sample, EB-6-30-22, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip, field, and equipment blank samples with the following exceptions.

| Blank Sample ID | Method | Analyte | Concentration |
|-----------------|--------|---------------------|---------------|
| Trip Blank | 8260B | Acetone | 3.8 µg/L |
| EB-6-30-22 | 200.7 | Dissolved Zinc | 0.0067 mg/L |
| EB-6-30-22 | 8015D | TPH DRO | 0.047 mg/L |
| EB-6-30-22 | 8260B | Toluene | 0.20 µg/L |
| EB-6-30-22 | 8270C | Di-n-butylphthalate | 17 µg/L |
| EB-6-30-22 | 8270C | Pyrene | 0.34 µg/L |

Detections of dissolved zinc in the associated samples that were less than the applicable reporting limits were assigned U qualifiers. Detections of dissolved zinc in the associated samples that were greater than the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples did not require qualification.

The TPH DRO results for the samples in batch 68572 were previously qualified due to a laboratory blank detection; therefore, additional qualification due to the equipment blank contamination was not required.

VALIDATION CRITERIA CHECKLIST

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples.

Sample DUP-6-30-22 was collected as a field duplicate of sample OW-14.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? Yes

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples.

22. For laboratory duplicates prepared from project samples, were RPDs within data validation or laboratory QC limits? N/A

Comments: Laboratory duplicates were prepared for the analysis of cyanide in batch WG1893803 from samples not associated with this data set.

The RPD values for the laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? N/A

Comments: Target analytes were not reported by more than one method in this data set.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
|------------------|----------------|----------------------------|--------------------------------|
| OW-14 | Barium | 2.3 | 2.4 |
| OW-30 | Nickel | 0.088 | 0.089 |
| OW-14 | Zinc | 0.0071 | 0.0084 |
| OW-30 | Zinc | 0.0097 | 0.013 |
| DUP-6-30-22 | Zinc | 0.0090 | 0.0092 |

The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

FIELD DUPLICATE SUMMARY

| Client Sample ID: OW-14
Field Duplicate Sample ID: DUP-6-30-22 | | | | |
|--|---------|-------------------|------------------|-----------------------------------|
| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
| Barium, Dissolved | E 200.7 | 2.4 mg/L | 2.4 mg/L | 0.0% |
| Barium, Total | E 200.7 | 2.3 mg/L | 2.5 mg/L | 8.3% |
| Cobalt, Dissolved | E 200.7 | 0.0077 mg/L | 0.0079 mg/L | 2.6% +/-RL |
| Cobalt, Total | E 200.7 | 0.010 mg/L | 0.0095 mg/L | 5.1% +/-RL |
| Nickel, Dissolved | E 200.7 | 0.097 mg/L | 0.10 mg/L | 3.0% |
| Nickel, Total | E 200.7 | 0.10 mg/L | 0.10 mg/L | 0.0% |
| Zinc, Dissolved | E 200.7 | 0.0084 mg/L | 0.0092 mg/L | 9.1% +/-RL |
| Zinc, Total | E 200.7 | 0.0071 mg/L | 0.0090 mg/L | 23.6% +/-RL |
| Arsenic, Dissolved | E200.8 | 0.0034 mg/L | 0.0032 mg/L | 6.1% |
| Arsenic, Total | E200.8 | 0.0038 mg/L | 0.0038 mg/L | 0.0% |
| Lead, Total | E200.8 | 0.00074 mg/L | 0.00051 mg/L | 36.8% +/-RL |
| Cyanide, Total | E335.4 | ND (0.00500 mg/L) | 0.00873 mg/L | DL |
| TPH DRO | SW8015 | 2.5 mg/L | 2.1 mg/L | 17.4% |
| TPH GRO | SW8015 | 61 mg/L | 61 mg/L | 0.0% |
| TPH ORO | SW8015 | ND (0.080 mg/L) | 0.074 mg/L | DL |
| Benzene | SW8260B | 22,000 µg/L | 23,000 µg/L | 4.4% |
| Ethylbenzene | SW8260B | 930 µg/L | 870 µg/L | 6.7% |
| Isopropylbenzene | SW8260B | 19 µg/L | 18 µg/L | 5.4% +/-RL |
| MTBE | SW8260B | 610 µg/L | 600 µg/L | 1.7% |
| n-Propylbenzene | SW8260B | 50 µg/L | 47 µg/L | 6.2% +/-RL |
| 1,4-Dioxane | SW8270C | ND (1.0 µg/L) | 1.3 µg/L | DL |
| 1-Methylnaphthalene | SW8270C | 17 µg/L | 16 µg/L | 6.1% |
| Acenaphthene | SW8270C | 0.48 µg/L | 0.46 µg/L | 4.3% +/-RL |
| Fluorene | SW8270C | 0.68 µg/L | 0.62 µg/L | 9.2% |
| Naphthalene | SW8270C | 15 µg/L | 14 µg/L | 6.9% |
| Phenanthrene | SW8270C | 0.36 µg/L | 0.30 µg/L | 18.2% +/-RL |
| Phenol | SW8270C | 38 µg/L | 34 µg/L | 11.1% +/-RL |
| <p>Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.</p> <p>DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).</p> <p>+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.</p> | | | | |

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| MBD | Method blank detection |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-LCS | The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| ERPD-LCS | The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision. |
| LR-SUR | The surrogate percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| EBD | Equipment blank detection |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |

| Analyte | Method | Field Sample ID | Lab Sample ID | Result | Limit | Units | Reviewer Qualifier | DV Flag Reasons |

| Reviewer: Mike Phillips, Senior Chemist | |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee, and Vista Analytical Laboratory of El Dorado Hills, California, evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-09-20-22 | 2209A41-001 |
| EB-09-20-22 | 2209A41-002 |

| FB 9-20-22 | 2209A41-011 |
| DUP 9-20-22 | 2209A41-012 |
| Trip Blank | 2209A41-013 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ⊗ Laboratory Qualifiers (Item 2)
- ✓ CoC Documentation (Item 3)
- ⊗ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Data review and evaluation was performed following criteria set forth in Data Review and Validation Guidelines for Perfluoroalkyl Substances (PFASs) Analyzed Using EPA Method 537, document number EPA 910-R-18-001, November 2018.
- Data were reviewed and evaluated according to criteria set forth in the Department of Defense (DoD) / Department of Energy (DOE) Quality Systems Manual (QSM) for Environmental Laboratories, Version 5.3, 2019.

Tier II Data Validation Report Summary

- Data were reviewed and evaluated according to criteria set forth in Data Validation Guidelines Module 3: Data Validation Procedure for Per- and Polyfluoroalkyl Substances Analysis by QSM Table B-15, United States Department of Defense, Environmental Data Quality Workgroup, May 2020.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| Qualifier | Definition |
|-----------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| J- | The result is an estimated concentration, but may be biased low |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |
| R | Rejected, data not usable |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 810 data points. The data completeness calculation does not include any submitted blank sample results. Fourteen data points were rejected. The data completeness measure for this data package is calculated to be 98.27% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformances related to this data set.

Method 8270C and Method 8270C SIM: Naphthalene, 1-methylnaphthalene, and 2-methylnaphthalene were reported by EPA Method 8270 instead of EPA Method 8270 SIM because of their elevated concentrations for sample OW-58, OW-58A, OW-63, Dup 9-20-22.

Method 8015D DRO: The LCS/LCSD had slightly elevated recoveries.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

D – Sample diluted due to matrix.

E – Estimated value. **TPH DRO and TPH MRO results were flagged by the laboratory with the E flag in the submitted samples. These results were assigned J qualifiers if detected, and non-detections were assigned UJ due to this lab identified non-conformance.**

J – Analyte detected below quantitation limits.

P1 – RPD value not applicable for sample concentrations less than 5 times the reporting limit.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? No

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. The laboratory noted that the shipping containers were sealed, and custody seals were present and intact on the shipping containers.

The trip blank sample was received but was not included on the CoC. The laboratory logged in the sample and performed the appropriate volatile analysis. Validation action was not required.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| Method | Sample(s) | Analyte(s) | Dilution Factor |
|--------|---------------------------|-----------------------------------|-----------------|
| 8015D | OW-58 | TPH DRO and MRO | 2 |
| 200.7 | Multiple Samples | Total and Dissolved Barium | 5 |
| 200.8 | OW-67, OW-68 | Select Total and Dissolved Metals | 5 |
| 245.1 | OW-67 | Total Mercury | 5 |
| 8015D | OW-58A | TPH DRO and MRO | 5 |
| 8015D | DUP 9-20-22 | TPH DRO and MRO | 10 |
| 8015D | OW-58A | TPH GRO | 20 |
| 8260B | OW-58A | Select VOC | 20 |
| 8015D | OW-63, OW-58, DUP 9-20-22 | TPH GRO | 50 |
| 8260B | OW-63, OW-58, DUP 9-20-22 | Select VOC | 50 |
| 8260B | OW-58A | Benzene, Toluene | 200 |
| 8260B | OW-58, DUP 9-20-22 | Benzene | 500 |

| VALIDATION CRITERIA CHECKLIST | |
|--|-----|
| 5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? | No |
| <p>Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.</p> <p>The CoC requested total and dissolved metals using only Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> <p>The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> | |
| 6. Were samples received in good condition within method-specified requirements? | No |
| <p>Comments: Samples were received on ice, in good condition, and with the cooler temperatures within the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ between 3.1°C and 5.4°C as noted on the Sample Log-in Check List. Samples transferred to Pace National were received in good condition with the cooler temperature within the recommended range at 2.0°C as noted on the CoC. Samples transferred to Vista Analytical Laboratory were received in good condition with the cooler temperature outside the recommended range at 1.4°C as noted on the CoC and the Sample Login Checklist.</p> <p>The cooler temperature below 2.0°C was judged as acceptable since the laboratory did not report the sample containers as broken or frozen.</p> | |
| 7. Were samples extracted/digested and analyzed within method-specified or technical holding times? | No |
| <p>Comments: The samples were extracted/digested and analyzed within method-specific holding times.</p> <p>PFAS Method: Samples EB-09-20-22 and OW-63 were extracted for PFAs outside the defined holding time of 14 days by approximately 21 days. Detected results for samples EB-09-20-22 and OW-63 by Method PFAS were assigned J qualifiers based on the holding time exceedances. Non-detect results were assigned UJ qualifiers based on the holding time exceedances.</p> | |
| 8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. | Yes |
| <p>Comments: The results were reported in concentration units of nanograms per liter (ng/L), micrograms per liter ($\mu\text{g/L}$), and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.</p> | |
| 9. Did the laboratory provide any specific initial and/or continuing calibration results? | No |
| <p>Comments: Initial and continuing calibration data were not included as part of this data set.</p> | |
| 10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? | N/A |
| <p>Comments: Initial and continuing calibration data were not included as part of this data set.</p> | |
| 11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | Yes |
| <p>Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.</p> | |

VALIDATION CRITERIA CHECKLIST

12. Were target analytes reported as not detected in the laboratory blanks? No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

| Method | Analyte | Batch | Concentration |
|--------|---------|-------|---------------|
| 8015D | TPH DRO | 70323 | 0.021 mg/L |
| 8015D | TPH DRO | 70376 | 0.025 mg/L |

The detection of TPH DRO in the associated sample EB-09-20-22 that was less than the applicable reporting limit was assigned a U qualifier. TPH DRO results in samples OW-60 and STP-1-NW that were greater than the blank detection and/or the laboratory reporting limit but less than 10 times the blank concentration were qualified with JB flags. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| Method | Analytes | Batch | MS Sample Source |
|-------------|-----------------------------|-----------|-----------------------------|
| 200.7 | Total Metals | 70359 | Not Prepared |
| 200.7 | Dissolved Silver | A91423 | DUP 9-20-22 |
| 200.7 | Dissolved Silver | A91594 | EB-09-20-22 |
| 200.7 | Dissolved Metals | B91392 | Not Prepared |
| 200.8 | Total Metals | 70359 | Not Prepared |
| 200.8 | Dissolved Metals | B91237 | EB-09-20-22 |
| 245.1 | Total and Dissolved Mercury | 70390 | OW-67 |
| 504.1 | EDB | 70321 | DUP 9-20-22 |
| PFAS Method | PFAs | B22J201 | Not Prepared |
| 4500CN E | Cyanide | WG1930995 | Not Associated, EB-09-20-22 |
| 8015D | TPH DRO and MRO | 70323 | Not Prepared |
| 8015D | TPH DRO and MRO | 70376 | Not Prepared |
| 8015D | TPH GRO | A91300 | Not Prepared |
| 8015D | TPH GRO | R91291 | OW-63 |
| 8260B | VOCs | R91223 | Not Prepared |
| 8270C SIM | SVOCs | 70340 | Not Prepared |
| 8270C | SVOCs | 70340 | Not Prepared |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The MS/MSD percent recoveries and RPDs for project samples were within data validation and laboratory QC limits.

The percent recoveries and RPD values for MS/MSDs prepared from non-project samples were evaluated and considered, but data were not qualified based on those results since matrix similarity to project samples could not be guaranteed.

VALIDATION CRITERIA CHECKLIST

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

The LCS and LCSD recoveries for TPH DRO in Method 8015D batch 70376 were outside the acceptance limits of 31.7-75.4% at 77.7% and 76.9%, respectively, indicating a potential high bias. Associated samples with detections for TPH DRO or TPH MRO were qualified with J+ flags due to potential high bias. Associated samples with non-detections for TPH DRO or TPH MRO did not require qualification.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

| Method | Surrogate | Sample | Surrogate Recovery | QC Limits |
|----------|-----------------------------|-------------|--------------------|------------|
| 8270 SIM | Nitrobenzene-d ₅ | EB-09-20-22 | 23.3% | 31.6-100% |
| 8270 SIM | 2-Fluorobiphenyl | EB-09-20-22 | 25.5% | 26.7-90.1% |
| 8270 SIM | 4-Terphenyl-d ₁₄ | EB-09-20-22 | 31.9% | 72.3-147% |
| 8015D | BFB | OW-58A | 171% | 70-130% |
| 8015D | BFB | OW-64 | 278% | 70-130% |
| 8015D | BFB | OW-60 | 189% | 70-130% |
| 8015D | BFB | OW-68 | 3,180% | 70-130% |
| 8270C | 2-Fluorophenol | OW-68 | 2.59% | 15-84.5% |
| 8270C | Phenol-d ₅ | OW-68 | 10.2% | 15-67% |
| 8270C | 2,4,6-Tribromophenol | OW-68 | 2.97% | 15-108% |
| 8015D | BFB | OW-67 | 1,060% | 70-130% |
| 8270C | 2-Fluorophenol | OW-67 | 0.299% | 15-84.5% |
| 8270C | Phenol-d ₅ | OW-67 | 0.653% | 15-67% |
| 8270C | 2,4,6-Tribromophenol | OW-67 | 0.0% | 15-108% |

TPH GRO was detected in the Method 8015D analysis of samples OW-58A, OW-64, OW-68, and OW-67, and these results were qualified as J+ to indicate a potential high bias. TPH GRO was not detected in sample OW-60, and qualification of data was not required.

Since Method 8270C and 8270C SIM surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the Method 8270C SIM analysis of samples OW-63, OW-58A, OW-58, OW-64, STP-1-NW, OW-60, OW-68, OW-67, and DUP 9-20-22, and for the Method 8270C analysis of samples EB-09-20-22 and OW-58A, and qualification of sample data was not required.

The analyte pyrene was detected in the sample EB-09-20-22 Method 8270C SIM analysis, and this result was qualified as J- due to evidence of potential low bias. The remaining associated analytes in the sample EB-09-20-22 Method 8270C SIM analysis were not detected, and these results were qualified as UJ.

The analytes in the acid fraction of samples OW-68 and OW-67 were not detected. Since at least 2 of 3 surrogates were recovered below 10%, these results were qualified as R to indicate rejected (not usable) data based on evidence of extreme low bias.

VALIDATION CRITERIA CHECKLIST

The TPH DRO and TPH MRO results for sample DUP 9-20-22 were not qualified based on the surrogate non-conformance in the Method 8015D analysis since the applied dilution of 10 times resulted in a surrogate concentration below routinely calibrated levels, and that result was deemed unreliable and possibly inaccurate.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB 9-20-22, and one equipment blank sample, EB-09-20-22, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration</u> |
|------------------------|------------------|---------------------------|----------------------|
| Trip Blank | 8260B | Acetone | 6.8 µg/L |
| FB 9-20-22 | 8260B | Acetone | 11 µg/L |
| EB-09-20-22 | 200.7 | Dissolved Chromium | 0.0023 mg/L |
| EB-09-20-22 | 200.7 | Dissolved Vanadium | 0.0022 mg/L |
| EB-09-20-22 | 200.7 | Dissolved Zinc | 0.0066 mg/L |
| EB-09-20-22 | 8015D | TPH DRO | 0.027 mg/L |
| EB-09-20-22 | 8260B | Acetone | 7.0 µg/L |
| EB-09-20-22 | 8270C | Di-n-butylphthalate | 12 µg/L |
| EB-09-20-22 | 8270C SIM | Pyrene | 0.34 µg/L |

Detections of the identified analytes in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of acetone and dissolved zinc in the associated samples that were greater than the reporting limits but less than or equal to 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples did not require qualification.

The TPH DRO results for the samples in batches 70323 and 70376 were previously qualified due to laboratory blank detections; therefore, additional qualification due to the equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples.

Sample DUP 9-20-22 was collected as a field duplicate of sample OW-58A.

VALIDATION CRITERIA CHECKLIST

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exceptions.

The RPD values for multiple analytes exceeded the data validation limit of 30%. The results for these analytes in samples OW-58A and DUP 9-20-22 were assigned J qualifiers due to evidence of poor precision.

The RPD value for TPH DRO greatly exceeded the data validation limit of 30% at 113.7%. The reported results for TPH DRO were assigned J qualifiers for the parent and field duplicate samples, and J qualifiers for the results for TPH DRO in the associated samples due to evidence of extremely poor precision (RPD > 100%).

22. For laboratory duplicates prepared from project samples, were RPDs within data validation or laboratory QC limits? N/A

Comments: Laboratory duplicates were prepared for the analysis of cyanide in batch WG1930995 from samples not associated with this data set.

The RPD values for the laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? N/A

Comments: Target analytes were not reported by more than one method.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
|------------------|----------------|----------------------------|--------------------------------|
| OW-58 | Mercury | ND | 0.00016 |
| OW-64 | Mercury | 0.00016 | 0.00017 |
| OW-68 | Mercury | 0.00025 | 0.00027 |
| OW-64 | Arsenic | 0.0024 | 0.0026 |
| EB-09-20-22 | Chromium | ND | 0.0023 |
| OW-58 | Nickel | 0.037 | 0.038 |
| OW-58 | Selenium | ND | 0.00044 |
| STP-1-NW | Selenium | 0.0050 | 0.0059 |
| OW-63 | Silver | ND | 0.0015 |
| OW-58 | Silver | ND | 0.0013 |
| STP-1-NW | Silver | ND | 0.0020 |
| OW-60 | Silver | ND | 0.0021 |
| OW-68 | Silver | 0.0059 | 0.0087 |
| OW-67 | Silver | 0.015 | 0.020 |

VALIDATION CRITERIA CHECKLIST

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result
(mg/L)</u> | <u>Dissolved Result
(mg/L)</u> |
|------------------|----------------|--------------------------------|------------------------------------|
| DUP 9-20-22 | Silver | ND | 0.0016 |
| EB-09-20-22 | Vanadium | ND | 0.0022 |
| OW-63 | Vanadium | ND | 0.0045 |
| OW-58 | Vanadium | 0.0045 | 0.0050 |
| OW-64 | Vanadium | 0.0068 | 0.0074 |
| STP-1-NW | Vanadium | 0.0033 | 0.0039 |
| EB-09-20-22 | Zinc | ND | 0.0066 |
| OW-63 | Zinc | ND | 0.012 |
| OW-58 | Zinc | ND | 0.0059 |
| OW-64 | Zinc | ND | 0.038 |
| OW-68 | Zinc | 0.013 | 0.036 |
| OW-67 | Zinc | 0.011 | 0.035 |

The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

FIELD DUPLICATE SUMMARY

| Client Sample ID: OW-58A
Field Duplicate Sample ID: DUP 9-20-22 | | | | |
|--|----------------|-------------------|-------------------|-----------------------------------|
| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
| Barium, Dissolved | E 200.7 | 0.92 mg/L | 0.90 mg/L | 2.2% |
| Barium, Total | E 200.7 | 1.1 mg/L | 1.1 mg/L | 0.0% |

| Phenanthrene | SW8270C | 5.8 µg/L | 4.5 µg/L | 25.2% |
| Phenol | SW8270C | 22 µg/L | ND (20 µg/L) | DL |
| Pyrene | SW8270C | 0.58 µg/L | 0.38 µg/L | 41.7% +/-RL |

Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

The RPD values for multiple analytes exceeded the data validation limit of 30%, which was evidence of poor precision. These analyte results were qualified as J for samples OW-58A and DUP 9-20-22.

The RPD value for TPH DRO greatly exceeded the data validation limit of 30% at 113.7%. The reported results for TPH DRO were assigned J qualifiers for the parent and field duplicate samples, and J qualifiers for the results for TPH DRO in the associated samples due to evidence of extremely poor precision (RPD > 100%).

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| EBD | Equipment blank detection |
| EBL | Flagged as estimated by the laboratory. |
| ERPD-FD | High field duplicate RPD. |
| HT-EX | Sample was extracted outside of the method holding time. |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| HR-SUR | The surrogate percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-SUR | The surrogate percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| MBD | Method blank detection |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |
| TBD | Trip blank detection |

Tier II Data Validation Report Summary

| | |
|--|--|
| Client: Marathon Oil | Laboratory: Hall Environmental Analysis Laboratory |
| Project Name: Western Refining Southwest, Q3 GW Sampling | Sample Matrix: Groundwater |
| Project Number: 697-080-002 Task 0006 | Sample Start Date: 09/27/2022 |
| Date Validated: 12/02/2022 | Sample End Date: 09/27/2022 |
| Parameters Included: <ul style="list-style-type: none"> ▪ Volatile Organic Compounds (VOC) by Environmental Protection Agency (EPA) Test Methods for Evaluating Solid Waste (SW-846) Method 8260B ▪ 1,2-Dibromoethane (EDB) by EPA Method 504.1 ▪ Semivolatile Organic Compounds (SVOC) by SW-846 Method 8270C and Method 8270 with Selected Ion Monitoring (SIM) ▪ Total Petroleum Hydrocarbons (TPH) Gasoline Range Organics (GRO) by SW-846 Method 8015D ▪ TPH Diesel Range Organics (DRO) and Motor Oil Range Organics (MRO) by SW-846 Modified Method 8015D ▪ Total and Dissolved Metals by EPA Methods 200.7 and 200.8 ▪ Total and Dissolved Mercury by EPA Method 245.1 ▪ Cyanide by Standard Methods for the Examination of Water and Wastewater (SM) Method 4500 CN E | |
| Laboratory Project ID: 2209E92 | |
| Data Validator: Kyle Power, Environmental Chemist | |
| Reviewer: Charles Ballek, Senior Chemist | |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blank
- Field blank
- Equipment blank

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-09-27-22 | 2209E92-001 |
| OW-1 | 2209E92-002 |

| BW-5C | 2209E92-004 |
| BW-5B | 2209E92-005 |
| MKTF-44 | 2209E92-006 |
| MKTF-43 | 2209E92-007 |
| OW-10 | 2209E92-008 |
| MKTF-32 | 2209E92-009 |
| MKTF-41 | 2209E92-010 |
| DUP-9-27-22 | 2209E92-011 |
| FB 9-27-22 | 2209E92-012 |
| Trip Blank | 2209E92-013 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ⊗ Calibration Ranges (Item 2)
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- ✓ Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicate (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| J- | The result is an estimated concentration, but may be biased low |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |
| R | Rejected, data not usable |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 900 data points. The data completeness calculation does not include any submitted blank sample results. Six data points were rejected. The data completeness measure for this data package is calculated to be 99.33% and is acceptable.

| VALIDATION CRITERIA CHECKLIST | |
|---|-----|
| 1. Was the report free of non-conformances identified by the laboratory? | No |
| <p>Comments: The laboratory noted the following non-conformances regarding the analytical data.</p> <p>"S" flagged surrogate/spikes denote that the analyte recovery was outside of the standard limits.</p> <p><u>Method 8270C</u>: 1,4-Dioxane is "E" flagged for sample MKTF-32 because the result was slightly above the calibration range.</p> <p><u>Method 8015D (DRO)</u>: The LCS had slightly elevated recovery. The LCSD had acceptable recoveries.</p> | |
| 2. Were the data free of data qualification flags and/or notes used by the laboratory?
If no, define. | No |
| <p>Comments: The laboratory used the following data qualification flags with this data set.</p> <p>E – Estimated value. The 1,4-dioxane result for sample MKTF-32 with this laboratory flag was qualified as J to indicate an estimated concentration.</p> <p>J – Analyte detected below quantitation limits</p> <p>R – RPD outside of range</p> <p>S – % Recovery outside of range due to dilution or matrix interference.</p> <p>* – Value exceeds maximum contaminant level.</p> | |
| 3. Were sample CoC forms and custody procedures complete? | Yes |
| <p>Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present or required since the samples were delivered to the laboratory by courier, and custody was maintained at all times.</p> | |
| 4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? | Yes |
| <p>Comments: The detection limits appeared to be acceptable. The following dilutions were applied.</p> <p><u>Method 8260B</u>: A dilution of 10 times was applied for the methyl tert-butyl ether (MTBE) analysis of sample MKTF-32.</p> <p><u>Method 200.7</u>: A dilution of 5 times was applied for the total metals analyses of sample MKTF-43.</p> <p><u>Method 200.8</u>: Dilutions of 5 times were applied for the total and dissolved metals analysis of select samples.</p> | |
| 5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? | No |
| <p>Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.</p> <p>The CoC requested total and dissolved metals using Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> <p>The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> | |
| 6. Were samples received in good condition within method-specified requirements? | No |
| <p>Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of 4°C ± 2°C between 1.0°C and 3.9°C as noted on the <i>Sample Log-In Check List</i> and CoC. The cooler temperature below 2°C was judged as acceptable since the samples were not reported to be frozen upon receipt at the laboratory, and the sample containers were reported to be intact.</p> | |

| VALIDATION CRITERIA CHECKLIST | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
|--|--------------------|--------|------------------|-------|------------------|-------|--------------|-------|--------------|-------|------------------|--------|--------------|-------|------------------|--------|--------------|-------|--------------|-------|--------------|-------|------------------|--------|--------------|-------|--------------------|--------|------|-------|--------------------|--------|--------------|-------|---------------|-------|---------|-------|-----|-------|--------------|-------|-----------------|-------|--------------|-------|---------|--------|--------------|-------|-----|--------|--------------|
| 7. Were samples extracted/digested and analyzed within method-specified or technical holding times? | Yes | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Comments: The samples were extracted/digested and analyzed within method-specific holding times. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. | Yes | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Comments: The results were reported in concentration units of micrograms per liter (µg/L) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 9. Did the laboratory provide any specific initial and/or continuing calibration results? | No | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Comments: Initial and continuing calibration data were not included as part of this data set. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? | N/A | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Comments: Initial and continuing calibration data were not included as part of this data set. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | Yes | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 12. Were target analytes reported as not detected in the laboratory blanks? | No | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exception.
<u>Modified Method 8015D</u> : The analyte TPH DRO was detected in the method blank from batch 70480 at 0.043 mg/L. Detections of TPH DRO in the associated samples that were less than the reporting limits were qualified as U. Results greater than the blank detection but less than 10 times the blank concentration were qualified as JB.
TPH-DRO was detected in sample MKTF-41 at a concentration greater than 10 times the blank detection and did not require qualification. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | Yes | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

VALIDATION CRITERIA CHECKLIST

| Method | Analytes | Batch | MS Sample Source |
|-----------|-------------------------|-----------|------------------|
| 8260B | Methyl tert-Butyl Ether | A91498 | Not Prepared |
| 8270C | SVOC | 70506 | Not Prepared |
| 8270 SIM | SVOC | 70506 | Not Prepared |
| 4500 CN E | Cyanide | WG1935264 | BW-4B |
| 4500 CN E | Cyanide | WG1935876 | Not Associated |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The MS/MSD percent recoveries and RPDs for project samples were within data validation and laboratory QC limits.

Recoveries and RPDs for MS/MSDs prepared from non-project samples were considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the exceptions listed in the following table.

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits | LCS/LCSD RPD | RPD QC Limits |
|----------|------------------------|--------|--------------|---------------|--------------------|--------------|---------------|
| 200.7 | Cadmium, Total | 70455 | 133% | ----- | 70-130% | ----- | ----- |
| 200.7 | Nickel, Total | 70455 | 69.1% | ----- | 70-130% | ----- | ----- |
| 200.7 | Beryllium, Dissolved | A91551 | 64.9% | ----- | 70-130% | ----- | ----- |
| 200.8 | Selenium, Dissolved | B91488 | 59.6% | ----- | 70-130% | ----- | ----- |
| 8015D | TPH DRO | 70480 | 90.9% | Acceptable | 31.7-75.4% | 20.7% | 20% |
| 8270 SIM | 1,4-Dioxane | 70506 | Acceptable | Acceptable | 15-60.5% | 30.1% | 29.7% |
| 8270 SIM | Naphthalene | 70506 | Acceptable | Acceptable | 15-78.3% | 41.6% | 31.7% |
| 8270 SIM | 1-Methylnaphthalene | 70506 | Acceptable | Acceptable | 15-79.6% | 43.1% | 31.4% |
| 8270 SIM | 2-Methylnaphthalene | 70506 | Acceptable | Acceptable | 15-78.6% | 44.0% | 30.5% |
| 8270 SIM | Acenaphthene | 70506 | Acceptable | Acceptable | 15-92% | 38.0% | 30.5% |
| 8270 SIM | Phenanthrene | 70506 | Acceptable | Acceptable | 21-103% | 31.9% | 26.4% |
| 8270 SIM | Anthracene | 70506 | Acceptable | Acceptable | 21.1-106% | 31.8% | 14.4% |
| 8270 SIM | Fluoranthene | 70506 | Acceptable | Acceptable | 32.8-119% | 29.5% | 14.8% |
| 8270 SIM | Pyrene | 70506 | Acceptable | Acceptable | 34.1-110% | 27.8% | 19.2% |
| 8270 SIM | Chrysene | 70506 | Acceptable | Acceptable | 31.3-112% | 26.3% | 19% |
| 8270 SIM | Indeno(1,2,3-cd)pyrene | 70506 | Acceptable | Acceptable | 24.7-152% | 30.4% | 21.3% |

TPH DRO was detected in the associated samples, and the results were qualified as J+ due to evidence of high bias. Qualification was not required for total cadmium based on evidence of potential high bias as it was not detected in the associated samples.

VALIDATION CRITERIA CHECKLIST

Results for total nickel, dissolved barium, and dissolved selenium were qualified as J- if detected and UJ if not detected in the associated samples due to possible low bias.

Analytes with LCS/LCSD RPD values exceeding laboratory QC limits were qualified as J if detected and UJ if not detected in the associated samples due to poor precision.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the exceptions listed in the following table.

| Method | Surrogate | Sample | Surrogate Recovery | QC Limits |
|--------|-----------------------|---------|--------------------|-----------|
| 8270C | 2-Fluorophenol | MKTF-43 | 1.82% | 15-84.5% |
| 8270C | Phenol-d ₅ | MKTF-43 | 5.85% | 15-67% |
| 8270C | 2,4,6-Tribromophenol | MKTF-43 | 2.98% | 15-108% |

Since Methods 8270C and 8270 SIM surrogate associations were not available from the laboratory, qualification was assigned to all the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. **This condition existed for the sample MKTF-43 for the acid surrogate, and associated analytes were qualified as R to indicate rejected data due to evidence of extremely low bias (recoveries less than 10%).**

Qualification was not required based on surrogate nonconformance in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB 9-27-22, and one equipment blank sample, EB-09-27-22, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples, with the exceptions listed in the following table.

| Blank Sample ID | Method | Analyte | Concentration |
|-----------------|--------|----------------|---------------|
| FB 9-27-22 | 8260B | 2-Butanone | 7.5 µg/L |
| EB-09-27-22 | 200.7 | Dissolved Zinc | 0.0077 mg/L |
| EB-09-27-22 | 8015D | TPH DRO | 0.022 mg/L |

Dissolved zinc was detected in the associated samples greater than the reporting limits but less than 10 times the blank result and was assigned JB qualifiers. Qualification was not required for 2-butanone as it was not detected in the associated samples.

The TPH DRO results were previously qualified due to laboratory blank contamination in batch 70480; therefore, additional qualification due to the equipment blank detection was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples. Sample DUP-9-27-22 was collected as a field duplicate of sample OW-1.

VALIDATION CRITERIA CHECKLIST

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exception.

The RPD value for dissolved zinc greatly exceeded the data validation QC limit for samples OW-1 and DUP-9-27-22 at 105.1%. Dissolved zinc was qualified as J for the parent, field duplicate, and associated samples.

22. For laboratory duplicates prepared from project samples, were RPDs within data validation or laboratory QC limits? Yes

Comments: Laboratory duplicates prepared for these analyses and laboratory duplicate sample sources are summarized in the following table.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>Laboratory Duplicate Sample Source</u> |
|---------------|-----------------|--------------|---|
| 4500 CN E | Cyanide | WG1935264 | EB-09-27-22 and OW-1 |
| 4500CN E | Cyanide | WG1935876 | Not Associated |

Not Associated – The laboratory duplicate sample source was not associated with this project.

Laboratory duplicate RPDs were within laboratory QC limits.

The RPD values for laboratory duplicate samples prepared from non-project samples were considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? N/A

Comments: Target analytes were not reported by more than one method.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results. The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |

FIELD DUPLICATE SUMMARY

| Client Sample ID: OW-1
Field Duplicate Sample ID: DUP-9-27-22 | | | | |
|---|--------------|-------------------|-------------------|-----------------------------------|
| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
| MTBE | 8260B | 2.7 µg/L | 3.0 µg/L | 10.5% |
| TPH DRO | 8015D | 0.031 mg/L | 0.045 mg/L | 36.8% +/-RL |
| Bis(2-ethylhexyl)phthalate | 8270C | 9.0 µg/L | ND (10 µg/L) | DL |
| Di-n-butyl phthalate | 8270C | 18 µg/L | ND (10 µg/L) | DL |
| 1,4-Dioxane | 8270 SIM | ND (1.0 µg/L) | 0.28 µg/L | DL |
| Pyrene | 8270 SIM | 0.32 µg/L | ND (1.0 µg/L) | DL |
| Barium, Dissolved | 200.7 | 0.041 mg/L | 0.041 mg/L | 0.0% |
| Barium, Total | 200.7 | 0.041 mg/L | 0.043 mg/L | 4.8% |
| Vanadium, Dissolved | 200.7 | 0.036 mg/L | 0.037 mg/L | 2.7% +/-RL |
| Vanadium, Total | 200.7 | 0.041 mg/L | 0.042 mg/L | 2.4% +/-RL |
| Zinc, Dissolved | 200.7 | 0.045 mg/L | 0.014 mg/L | 105.1% |
| Arsenic, Dissolved | 200.8 | 0.00060 mg/L | 0.00064 mg/L | 6.5% +/-RL |
| Arsenic, Total | 200.8 | 0.00065 mg/L | 0.00065 mg/L | 0.0% +/-RL |
| Lead, Total | 200.8 | 0.00014 mg/L | 0.00014 mg/L | 0.0% +/-RL |
| Selenium, Dissolved | 200.8 | 0.0025 mg/L | 0.0025 mg/L | 0.0% |
| Selenium, Total | 200.8 | 0.0020 mg/L | 0.0024 mg/L | 18.2% |
| <p>Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.</p> <p>DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).</p> <p>+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.</p> <p>The RPD value for dissolved zinc greatly exceeded the data validation QC limit and the results were qualified as J for the associated samples due to evidence of poor precision.</p> | | | | |

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| ECAL | The result exceeds the calibration range. |
| MBD | Method blank detection |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-LCS | The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| ERPD-LCS | The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision. |
| LR-SUR | The surrogate percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| EBD | Equipment blank detection |
| ERPD-FD | High field duplicate RPD. |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |

| Reviewer: Mike Phillips, Senior Chemist | |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-09-28-22 | 2209F93-001 |
| BW-1C | 2209F93-002 |
| BW-2C | 2209F93-003 |
| BW-2B | 2209F93-004 |
| BW-3C | 2209F93-005 |
| BW-3B | 2209F93-006 |
| DUP-9-28-22 | 2209F93-007 |
| FB 9-28-22 | 2209F93-008 |
| Trip Blank | 2209F93-009 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ⊗ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ✓ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ✓ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 540 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

| VALIDATION CRITERIA CHECKLIST | |
|---|-----|
| 1. Was the report free of non-conformances identified by the laboratory? | No |
| Comments: The laboratory noted the following analytical non-conformance related to this data set.
<u>Method 8270C SIM</u> : The method blank had a low surrogate recovery for 2,4,6-tribromophenol. | |
| 2. Were the data free of data qualification flags and/or notes used by the laboratory?
If no, define. | No |
| Comments: The laboratory used the following data qualification flags with this data set.
J – Analyte detected below quantitation limits.
R – % RPD outside of range.
S – % Recovery outside of range due to dilution or matrix interference. | |
| 3. Were sample CoC forms and custody procedures complete? | Yes |
| Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. The laboratory noted that the shipping containers were sealed, and custody seals were present and intact on the shipping containers. | |
| 4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? | Yes |
| Comments: The detection limits appeared to be acceptable. The following dilution was applied.
<u>Method 200.8</u> : Sample EB-09-28-22 was diluted by a factor of 5 times for the analysis of dissolved antimony. | |
| 5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? | No |
| Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.
The CoC requested total and dissolved metals using only Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.
The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement. | |
| 6. Were samples received in good condition within method-specified requirements? | No |
| Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of 4°C ± 2°C at 0.2°C, 0.3°C, and 3.3°C as noted on the CoC and Sample Log-in Check List. Samples transferred to Pace National were received in good condition with the cooler temperature within the recommended range at 3.1°C as noted on the CoC. The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen. | |
| 7. Were samples extracted/digested and analyzed within method-specified or technical holding times? | Yes |
| Comments: The samples were extracted/digested and analyzed within method-specific holding times. | |
| 8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. | Yes |
| Comments: The results were reported in concentration units of micrograms per liter (µg/L) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested. | |

VALIDATION CRITERIA CHECKLIST

9. Did the laboratory provide any specific initial and/or continuing calibration results? No

Comments: Initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

12. Were target analytes reported as not detected in the laboratory blanks? No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exception.

TPH DRO was detected in the laboratory blank for Method 8015D batch 70492 at a concentration of 0.019 mg/L. Sample results detected below or equal to the blank concentration and/or the laboratory reporting limit were qualified with a U flag. Non-detections of this analyte in the associated samples and results greater than ten times the blank concentration did not require qualification.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| Method | Analytes | Batch | MS Sample Source |
|-----------|-----------------------------|-----------|------------------|
| 200.7 | Total Metals | 70489 | Not Prepared |
| 200.7 | Dissolved Metals | B91551 | Not Prepared |
| 200.7 | Dissolved Metals | C91551 | DUP-9-28-22 |
| 200.8 | Total Metals | 70489 | EB-09-28-22 |
| 200.8 | Dissolved Metals | A91411 | DUP-9-28-22 |
| 200.8 | Dissolved Antimony | B91488 | Not Prepared |
| 245.1 | Total and Dissolved Mercury | 70626 | DUP-9-28-22 |
| 504.1 | EDB | 70493 | EB-09-28-22 |
| 504.1 | EDB | 70550 | Not Prepared |
| 4500CN E | Cyanide | WG1935876 | BW-1C |
| 8015D | TPH DRO and MRO | 70492 | Not Prepared |
| 8015D | TPH GRO | A91437 | EB-09-28-22 |
| 8260B | VOCs | B91553 | FB 9-28-22 |
| 8260B | VOCs | R91553 | Not Prepared |
| 8270C SIM | SVOCs | 70506 | Not Prepared |
| 8270C | SVOCs | 70506 | Not Prepared |
| 8270C SIM | SVOCs | 70536 | Not Prepared |
| 8270C | SVOCs | 70536 | Not Prepared |

Not Prepared – Matrix spikes were not prepared/reported for this batch.

VALIDATION CRITERIA CHECKLIST

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? No

Comments: The percent recoveries and RPDs for MS/MSDs prepared from project samples were within data validation and laboratory QC limits, with the following exception.

The MS/MSD RPD for benzene in batch B91553 exceeded the QC limit of 20% at 20.5%. Benzene was not detected in the associated samples, and these results were qualified as UJ due to evidence of poor precision.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits | LCS/LCSD RPD | RPD QC Limits |
|-----------|------------------------|--------|--------------|---------------|--------------------|--------------|---------------|
| 200.7 | Total Cobalt | 70489 | 135% | ----- | 70-130% | ----- | ----- |
| 200.7 | Dissolved Beryllium | B91551 | 61.9% | ----- | 70-130% | ----- | ----- |
| 200.7 | Dissolved Beryllium | C91551 | 67.2% | ----- | 70-130% | ----- | ----- |
| 200.7 | Dissolved Zinc | C91551 | 137% | ----- | 70-130% | ----- | ----- |
| 200.8 | Total Selenium | 70489 | 149% | ----- | 70-130% | ----- | ----- |
| 8270C SIM | 1,4-Dioxane | 70506 | Acceptable | Acceptable | 15-60.5% | 30.1% | 29.7% |
| 8270C SIM | Naphthalene | 70506 | Acceptable | Acceptable | 15-78.3% | 41.6% | 31.7% |
| 8270C SIM | 1-Methylnaphthalene | 70506 | Acceptable | Acceptable | 15-79.6% | 43.1% | 31.4% |
| 8270C SIM | 2-Methylnaphthalene | 70506 | Acceptable | Acceptable | 15-78.6% | 44.0% | 30.5% |
| 8270C SIM | Acenaphthene | 70506 | Acceptable | Acceptable | 15-92% | 38.0% | 30.5% |
| 8270C SIM | Phenanthrene | 70506 | Acceptable | Acceptable | 21-103% | 31.9% | 26.4% |
| 8270C SIM | Anthracene | 70506 | Acceptable | Acceptable | 21.1-106% | 31.8% | 14.4% |
| 8270C SIM | Fluoranthene | 70506 | Acceptable | Acceptable | 32.8-119% | 29.5% | 14.8% |
| 8270C SIM | Pyrene | 70506 | Acceptable | Acceptable | 34.1-110% | 27.8% | 19.2% |
| 8270C SIM | Chrysene | 70506 | Acceptable | Acceptable | 31.3-112% | 26.3% | 19% |
| 8270C SIM | Indeno(1,2,3-cd)pyrene | 70506 | Acceptable | Acceptable | 24.7-152% | 30.4% | 21.3% |
| 8270C SIM | 1,4-Dioxane | 70536 | Acceptable | Acceptable | 15-60.5% | 55.1% | 29.7% |
| 8270C SIM | Naphthalene | 70536 | Acceptable | Acceptable | 15-78.3% | 38.6% | 31.7% |
| 8270C SIM | 1-Methylnaphthalene | 70536 | Acceptable | Acceptable | 15-79.6% | 35.9% | 31.4% |
| 8270C SIM | 2-Methylnaphthalene | 70536 | Acceptable | Acceptable | 15-78.6% | 31.9% | 30.5% |
| 8270C SIM | Acenaphthene | 70536 | Acceptable | Acceptable | 15-92% | 43.3% | 30.5% |
| 8270C SIM | Fluorene | 70536 | Acceptable | Acceptable | 15-96% | 29.4% | 25.1% |

Detections of total cobalt, dissolved zinc, and total selenium in the associated samples were qualified as J+ due to evidence of potential high bias. Non-detection of these analytes in the associated samples did not require qualification.

Dissolved beryllium was not detected in the associated samples and the results were assigned UJ qualifiers due to evidence of potential low bias,

VALIDATION CRITERIA CHECKLIST

The identified analytes with LCS/LCSD RPD values that exceeded the defined QC limits were not detected in the associated samples. These results were qualified as UJ due to evidence of poor precision.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB 9-28-22, and one equipment blank sample, EB-09-28-22, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration</u> |
|------------------------|---------------|-----------------------|----------------------|
| Trip Blank | 8260B | Acetone | 3.4 µg/L |
| FB 9-28-22 | 8260B | 2-Butanone | 16 µg/L |
| FB 9-28-22 | 8260B | Acetone | 4.8 µg/L |
| EB-9-28-22 | 8260B | Acetone | 12 µg/L |
| EB-9-28-22 | 8015D | TPH DRO | 0.019 mg/L |
| EB-9-28-22 | 200.7 | Dissolved Zinc | 0.0048 mg/L |

Detections of acetone in the associated samples that were less than the applicable reporting limits were assigned U qualifiers. Detections of acetone and dissolved zinc in the associated samples that were greater than the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of these analytes in the associated samples and results greater than 10 times the blank detection did not require qualification.

The TPH DRO results for the samples in batch 70492 were previously qualified due to a laboratory blank detection; therefore, additional qualification due to the equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples.

Sample DUP-9-28-22 was collected as a field duplicate of sample BW-1C.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? Yes

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples.

VALIDATION CRITERIA CHECKLIST

22. For laboratory duplicates prepared from project samples, were RPDs within data validation or laboratory QC limits? N/A

Comments: Laboratory duplicates were prepared for the analysis of cyanide in batch WG1935876 from sample EB-09-28-22 and a sample not associated with this data set.

The sample EB-09-28-22 and the laboratory duplicate were both non-detect for cyanide, and an RPD could not be calculated.

The RPD value for the laboratory duplicate sample pair prepared from a non-project sample was evaluated and considered, but data were not qualified based on that result since matrix similarity to project samples could not be guaranteed.

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? N/A

Comments: Target analytes were not reported by more than one method.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
|------------------|----------------|----------------------------|--------------------------------|
| BW-3C | Antimony | ND | 0.00057 |
| BW-3B | Antimony | ND | 0.0013 |
| DUP-9-28-22 | Antimony | ND | 0.00055 |
| BW-1C | Arsenic | 0.00015 | 0.00017 |
| DUP-9-28-22 | Arsenic | ND | 0.00015 |
| BW-1C | Nickel | ND | 0.0077 |
| BW-3C | Selenium | ND | 0.00067 |
| EB-09-28-22 | Zinc | ND | 0.0048 |
| BW-1C | Zinc | ND | 0.024 |
| BW-2C | Zinc | ND | 0.018 |
| BW-3C | Zinc | ND | 0.028 |
| BW-3B | Zinc | ND | 0.30 |
| DUP-9-28-22 | Zinc | ND | 0.026 |

The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

FIELD DUPLICATE SUMMARY

| Client Sample ID: BW-1C
Field Duplicate Sample ID: DUP-9-28-22 | | | | |
|--|---------|-------------------|------------------|-----------------------------------|
| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
| Barium, Dissolved | E 200.7 | 0.017 mg/L | 0.017 mg/L | 0.0% |
| Barium, Total | E 200.7 | 0.018 mg/L | 0.018 mg/L | 0.0% |
| Chromium, Total | E 200.7 | ND (0.0060 mg/L) | 0.0024 mg/L | DL |
| Nickel, Dissolved | E 200.7 | 0.0077 mg/L | ND (0.010 mg/L) | DL |
| Zinc, Dissolved | E 200.7 | 0.024 mg/L | 0.026 mg/L | 8.0% |
| Antimony, Dissolved | E200.8 | ND (0.0010 mg/L) | 0.00055 mg/L | DL |
| Arsenic, Dissolved | E200.8 | 0.00017 mg/L | 0.00015 mg/L | 12.5% +/-RL |
| Arsenic, Total | E200.8 | 0.00015 mg/L | ND (0.0010 mg/L) | DL |
| TPH DRO | SW8015 | 0.025 mg/L | 0.018 mg/L | 32.6% +/-RL |
| Acetone | SW8260B | 7.1 µg/L | 11 µg/L | 43.1% +/-RL |
| <p>Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.</p> <p>DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).</p> <p>+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.</p> | | | | |

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| EBD | Equipment blank detection |
| ERPD-LCS | The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision. |
| ERPD-MS | The MS/MSD RPD exceeded the upper acceptable limit indicating poor precision. |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-LCS | The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| MBD | Method blank detection |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |
| TBD | Trip blank detection |

| Reviewer: Mike Phillips, Senior Chemist | |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-09-29-22 | 2209H02-001 |
| MW-1 | 2209H02-002 |
| SMW-4 | 2209H02-003 |
| MW-2 | 2209H02-004 |
| MW-5 | 2209H02-005 |
| DUP-9-29-22 | 2209H02-006 |
| FB 9-29-22 | 2209H02-007 |
| Trip Blank | 2209H02-008 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ⊗ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ✓ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 450 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? Yes

Comments: The laboratory did not report non-conformances related to the analytical data for this sample set.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

J – Analyte detected below quantitation limits.

J6 – The sample matrix interfered with the ability to make any accurate determination; spike value is low.

R – % RPD outside of range.

S – % Recovery outside of range due to dilution or matrix interference.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present because the samples were transferred to a laboratory field courier service for transport from the field to the laboratory, and custody was maintained at all times.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| Method | Sample(s) | Analyte(s) | Dilution Factor |
|--------|-----------|------------------|-----------------|
| 200.7 | MW-5 | Dissolved Metals | 5 |
| 245.1 | SMW-4 | Total Mercury | 5 |

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? No

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.

The CoC requested total and dissolved metals using only Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

6. Were samples received in good condition within method-specified requirements? No

Comments: Samples were received on ice, in good condition, and with the cooler temperatures outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ at 0.6°C , 1.0°C , and 1.7°C as noted on the CoC and Sample Log-in Check List. Samples transferred to Pace National were received in good condition with the cooler temperature within the recommended range at 3.0°C as noted on the CoC.

The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen.

VALIDATION CRITERIA CHECKLIST

7. Were samples extracted/digested and analyzed within method-specified or technical holding times? Yes

Comments: The samples were extracted/digested and analyzed within method-specific holding times.

8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. Yes

Comments: The results were reported in concentration units of micrograms per liter (µg/L) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.

9. Did the laboratory provide any specific initial and/or continuing calibration results? No

Comments: Initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

12. Were target analytes reported as not detected in the laboratory blanks? No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

| Method | Analyte | Batch | Concentration |
|--------|------------|-------|---------------|
| 200.7 | Total Zinc | 70537 | 0.0055 mg/L |
| 8015D | TPH DRO | 70521 | 0.019 mg/L |

Detections of the identified analytes in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| Method | Analytes | Batch | MS Sample Source |
|----------|-----------------------------|-----------|------------------|
| 200.7 | Total Metals | 70537 | Not Prepared |
| 200.7 | Dissolved Metals | C91551 | Not Prepared |
| 200.8 | Total Metals | 70537 | Not Prepared |
| 200.8 | Dissolved Metals | A91522 | Not Prepared |
| 245.1 | Total and Dissolved Mercury | 70627 | SMW-4 |
| 504.1 | EDB | 70550 | Not Prepared |
| 4500CN E | Cyanide | WG1937600 | Not Associated |
| 8015D | TPH DRO and MRO | 70521 | Not Prepared |

VALIDATION CRITERIA CHECKLIST

| Method | Analytes | Batch | MS Sample Source |
|-----------|----------|---------|------------------|
| 8015D | TPH GRO | GW91584 | MW-1 |
| 8260B | VOCs | R91600 | MW-1 |
| 8270C SIM | SVOCs | 70536 | Not Prepared |
| 8270C | SVOCs | 70536 | Not Prepared |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? No

Comments: The MS/MSD percent recoveries and RPDs for project samples were within data validation and laboratory QC limits, with the following exception.

The reported MS and MSD percent recoveries for mercury in Method 245.1 batch 70627 were outside the QC limits of 75-125% at 126%, 72.1%, and 74.7%. The results for all of the associated samples in the batch would typically be qualified based on the MS/MSD results. However, since conflicting results (low and high recoveries) were reported for this batch, the determination of which qualifier to be applied would be arbitrary. Therefore, only the non-detected dissolved mercury and total mercury results for the parent sample SMW-4 were qualified UJ due to these non-conformances.

The percent recoveries and RPD values for MS/MSDs prepared from non-project samples were evaluated and considered, but data were not qualified based on those results since matrix similarity to project samples could not be guaranteed.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits | LCS/LCSD RPD | RPD QC Limits |
|-----------|---------------------|--------|--------------|---------------|--------------------|--------------|---------------|
| 200.7 | Total Chromium | 70537 | 152% | ----- | 70-130% | ----- | ----- |
| 200.7 | Dissolved Beryllium | C91551 | 67.2% | ----- | 70-130% | ----- | ----- |
| 200.7 | Dissolved Zinc | C91551 | 137% | ----- | 70-130% | ----- | ----- |
| 8270C SIM | 1,4-Dioxane | 70536 | Acceptable | Acceptable | 15-60.5% | 55.1% | 29.7% |
| 8270C SIM | Naphthalene | 70536 | Acceptable | Acceptable | 15-78.3% | 38.6% | 31.7% |
| 8270C SIM | 1-Methynaphthalene | 70536 | Acceptable | Acceptable | 15-79.6% | 35.9% | 31.4% |
| 8270C SIM | 2-Methynaphthalene | 70536 | Acceptable | Acceptable | 15-78.6% | 31.9% | 30.5% |
| 8270C SIM | Acenaphthene | 70536 | Acceptable | Acceptable | 15-92% | 43.3% | 30.5% |
| 8270C SIM | Fluorene | 70536 | Acceptable | Acceptable | 15-96% | 29.4% | 25.1% |

Detections of total chromium and dissolved zinc were qualified as J+ due to the evidence of potential high bias.

The non-detection of total chromium in sample MW-5 did not require qualification.

Dissolved beryllium was not detected in the associated samples, and these results were qualified as UJ due to the evidence of potential low bias.

The identified analytes with LCS/LCSD RPD values that were above the QC limit were not detected in the associated samples. These results were qualified as UJ due to evidence of poor precision.

VALIDATION CRITERIA CHECKLIST

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB 9-29-22, and one equipment blank sample, EB-09-29-22, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration</u> |
|------------------------|---------------|-----------------------|----------------------|
| Trip Blank | 8260B | Acetone | 3.2 µg/L |
| EB-09-29-22 | 8260B | Acetone | 5.4 µg/L |
| EB-09-29-22 | 8260B | Total Xylenes | 0.46 µg/L |
| EB-09-29-22 | 8015D | TPH DRO | 0.045 mg/L |
| EB-09-29-22 | 200.7 | Total Chromium | 0.0025 mg/L |
| EB-09-29-22 | 200.7 | Dissolved Zinc | 0.0072 mg/L |

Detections of acetone, total chromium, and dissolved zinc in the associated samples that were less than the applicable reporting limits were assigned U qualifiers. Detections of dissolved zinc in the associated samples that were greater than the reporting limits but less than or equal to 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

The TPH DRO results for the samples in batch 70521 were previously qualified due to a laboratory blank detection; therefore, additional qualification due to the equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples.

Sample DUP-9-29-22 was collected as a field duplicate of sample MW-1.

VALIDATION CRITERIA CHECKLIST

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exception.

The RPD value for dissolved zinc greatly exceeded the data validation limit of 30% at 107.2%. The reported results for dissolved zinc were assigned J qualifiers for the parent and field duplicate samples, and J qualifiers for the results for dissolved zinc in the associated samples due to evidence of extremely poor precision (RPD > 100%).

An RPD value could not be calculated for dissolved nickel for the field duplicate pair MW-1 and DUP-9-29-22 since the analyte was detected in the parent sample and was undetected in the duplicate sample. As the detection in the parent sample was greater than two times the reporting limit, dissolved nickel was qualified as J for the parent sample MW-1 and UJ for the duplicate sample DUP-9-29-22.

22. For laboratory duplicates prepared from project samples, were RPDs within data validation or laboratory QC limits? N/A

Comments: Laboratory duplicates were prepared for the analysis of cyanide in batch WG1937600 from samples not associated with this data set.

The RPD values for the laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? N/A

Comments: Target analytes were not reported by more than one method.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results. The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

| Sample ID | Analyte | Total Result (mg/L) | Dissolved Result (mg/L) |
|-------------|---------|---------------------|-------------------------|
| MW-1 | Arsenic | 0.0013 | 0.0014 |
| MW-1 | Nickel | ND | 0.022 |
| EB-09-29-22 | Zinc | ND | 0.0072 |
| MW-1 | Zinc | 0.0047 | 0.096 |
| SMW-4 | Zinc | ND | 0.055 |
| MW-2 | Zinc | ND | 0.037 |
| MW-5 | Zinc | ND | 0.029 |
| DUP-9-29-22 | Zinc | ND | 0.029 |

FIELD DUPLICATE SUMMARY

| Client Sample ID: MW-1
Field Duplicate Sample ID: DUP-9-29-22 | | | | |
|--|----------------|-------------------|------------------------|-----------------------------------|
| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
| Barium, Dissolved | E 200.7 | 0.013 mg/L | 0.013 mg/L | 0.0% |
| Barium, Total | E 200.7 | 0.013 mg/L | 0.013 mg/L | 0.0% |
| Chromium, Total | E 200.7 | 0.0029 mg/L | 0.0033 mg/L | 12.9% +/-RL |
| Nickel, Dissolved | E 200.7 | 0.022 mg/L | ND (0.010 mg/L) | DL |
| Zinc, Dissolved | E 200.7 | 0.096 mg/L | 0.029 mg/L | 107.2% |
| Zinc, Total | E 200.7 | 0.0047 mg/L | ND (0.010 mg/L) | DL |
| Arsenic, Dissolved | E200.8 | 0.0014 mg/L | 0.0013 mg/L | 7.4% +/-RL |
| Arsenic, Total | E200.8 | 0.0013 mg/L | 0.0015 mg/L | 14.3% +/-RL |
| Lead, Dissolved | E200.8 | 0.00013 mg/L | 0.00012 mg/L | 8.0% +/-RL |
| Lead, Total | E200.8 | 0.00073 mg/L | 0.00066 mg/L | 10.1% +/-RL |
| TPH DRO | SW8015 | 0.017 mg/L | 0.030 mg/L | 55.3% +/-RL |
| Acetone | SW8260B | 3.3 µg/L | ND (10 µg/L) | DL |
| <p>Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.</p> <p>DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).</p> <p>+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.</p> <p>The RPD value for dissolved zinc greatly exceeded the data validation limit of 30% at 107.2%. The reported results for dissolved zinc were assigned J qualifiers for the parent and field duplicate samples, and J qualifiers for the results for dissolved zinc in the associated samples due to evidence of extremely poor precision (RPD > 100%).</p> <p>An RPD value could not be calculated for dissolved nickel for the field duplicate pair MW-1 and DUP-9-29-22 since the analyte was detected in the parent sample and was undetected in the duplicate sample. As the detection in the parent sample was greater than two times the reporting limit, dissolved nickel was qualified as J for the parent sample MW-1 and UJ for the duplicate sample DUP-9-29-22.</p> | | | | |

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|--|
| EBD | Equipment blank detection |
| ERPD-FD | High field duplicate RPD. |
| ERPD-LCS | The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision. |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-LCS | The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| LR-MS | The MS and/or MSD percent recovery was less than the lower acceptable limit indicating possible matrix interference. |
| MBD | Method blank detection |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |
| TBD | Trip blank detection |

| Analyte | Method | Field Sample ID | Lab Sample ID | Result | Limit | Units | Reviewer Qualifier | DV Flag Reasons |

| Reviewer: Mike Phillips, Senior Chemist | |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-9-30-22 | 2209H72-001 |
| MW-4 | 2209H72-002 |
| SMW-2 | 2209H72-003 |
| OW-59 | 2209H72-004 |
| OW-14 | 2209H72-005 |
| OW-30 | 2209H72-006 |
| DUP-9-30-22 | 2209H72-007 |
| FB-9-30-22 | 2209H72-008 |
| Trip Blank | 2209H72-009 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 540 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformances related to this data set.

Methods 8270C and 8270C SIM: 1-Methylnaphthalene was reported by EPA Method 8270C instead of EPA Method 8270C SIM because of their elevated concentrations for sample OW-14.

The LCSD had elevated recoveries for the "S" flagged compounds.

Method 8015D DRO/MRO: The LCS had elevated recovery. The LCSD had elevated recovery due to sample carryover.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

J – Analyte detected below quantitation limits.

J6 – The sample matrix interfered with the ability to make any accurate determination; spike value is low.

R – % RPD outside of range.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? No

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present because the samples were transferred to a laboratory field courier service for transport from the field to the laboratory, and custody was maintained at all times.

The trip blank sample was received but was not included on the CoC. The laboratory logged in the sample and performed the appropriate volatile analysis. Validation action was not required.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| Method | Sample(s) | Analyte(s) | Dilution Factor |
|--------|-----------|----------------------------|-----------------|
| 200.7 | OW-14 | Dissolved and Total Barium | 5 |
| 8015D | OW-30 | TPH DRO and MRO | 10 |
| 8015D | OW-14 | TPH GRO | 50 |
| 8260B | OW-14 | Select VOCs | 50 |
| 8260B | OW-30 | MTBE | 50 |
| 8260B | OW-14 | Benzene | 500 |

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? No

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.

The CoC requested total and dissolved metals using only Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

VALIDATION CRITERIA CHECKLIST

6. Were samples received in good condition within method-specified requirements?

No

Comments: Samples were received on ice, in good condition, and with the cooler temperatures outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ between 5.6°C and 9.1°C as noted on the CoC and Sample Log-in Check List. Samples transferred to Pace National were received in good condition with the cooler temperature outside the recommended range at 1.6°C as noted on the CoC.

The cooler temperatures above 6°C were evaluated to be acceptable since the samples were received at the laboratory on the same day (within 24 hours) of the last sample collection time, and temperature equilibrium had not been established.

The cooler temperature below 2.0°C was judged as acceptable since the laboratory did not report the sample containers as broken or frozen.

7. Were samples extracted/digested and analyzed within method-specified or technical holding times?

Yes

Comments: The samples were extracted/digested and analyzed within method-specific holding times.

8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil.

Yes

Comments: The results were reported in concentration units of micrograms per liter ($\mu\text{g/L}$) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.

9. Did the laboratory provide any specific initial and/or continuing calibration results?

No

Comments: Initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits?

N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method?

Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

12. Were target analytes reported as not detected in the laboratory blanks?

No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

| Method | Analyte | Batch | Concentration |
|--------|------------|-------|---------------|
| 200.7 | Total Zinc | 70537 | 0.0055 mg/L |
| 8015D | TPH DRO | 70553 | 0.045 mg/L |

Detections of the identified analytes in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of TPH DRO in the associated samples that were greater than the reporting limits but less than or equal to 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

VALIDATION CRITERIA CHECKLIST

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>MS Sample Source</u> |
|---------------|-----------------------------|--------------|----------------------------|
| 200.7 | Total Metals | 70537 | Not Prepared |
| 200.7 | Dissolved Metals | A91612 | Not Prepared |
| 200.7 | Dissolved Metals | C91551 | EB-9-30-22 |
| 200.8 | Total Metals | 70537 | Not Prepared |
| 200.8 | Dissolved Metals | A91522 | OW-30, DUP-9-30-22 |
| 245.1 | Total and Dissolved Mercury | 70628 | OW-14 |
| 504.1 | EDB | 70550 | MW-4 |
| 504.1 | EDB | 70551 | Not Prepared |
| 4500CN E | Cyanide | WG1937600 | Not Associated, EB-9-30-22 |
| 4500CN E | Cyanide | WG1937792 | Not Associated |
| 8015D | TPH DRO and MRO | 70553 | Not Prepared |
| 8015D | TPH GRO | R91497 | MW-4 |
| 8260B | VOCs | R91600 | Not Prepared |
| 8270C SIM | SVOCs | 70583 | Not Prepared |
| 8270C | SVOCs | 70583 | Not Prepared |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The percent recoveries and RPDs for MS/MSDs prepared from project samples were within data validation and laboratory QC limits.

The percent recoveries and RPD values for MS/MSDs prepared from non-project samples were evaluated and considered, but data were not qualified based on those results since matrix similarity to project samples could not be guaranteed.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

VALIDATION CRITERIA CHECKLIST

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits?

No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits | LCS/LCSD RPD | RPD QC Limits |
|-----------|------------------------|--------|--------------|---------------|--------------------|--------------|---------------|
| 200.7 | Total Chromium | 70537 | 152% | ----- | 70-130% | ----- | ----- |

| 8270C SIM | Indeno(1,2,3-cd)pyrene | 70583 | Acceptable | Acceptable | 24.7-152% | 22.4% | 21.3% |

Target analytes with LCS and/or LCSD recoveries greater than the data validation and/or laboratory QC limits were qualified as J+ if detected in the associated samples due to evidence of potential high bias. Non-detection of these analytes in the associated samples did not require qualification.

Dissolved beryllium was not detected in the associated samples and the results were qualified as UJ due to evidence of potential low bias,

The analytes with LCS/LCSD RPD values that were greater than the QC limit were qualified as J for detections and UJ for non-detections for the associated samples due to evidence of poor precision.

17. Were surrogate recoveries within laboratory QC limits?

No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

| Method | Surrogate | Sample | Surrogate Recovery | QC Limits |
|--------|-----------|--------|--------------------|-----------|
| 8015D | BFB | SMW-2 | 1,020% | 70-130% |
| 8015D | BFB | OW-59 | 6,210% | 70-130% |

TPH GRO was detected in the Method 8015D analyses of samples SMW-2 and OW-59, and these results were assigned J+ qualifiers to indicate potential high bias.

Since Method 8270C surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the Method 8270C analysis of samples SMW-2 and OW-30, and qualification of sample data was not required.

The TPH DRO and TPH MRO results for sample OW-30 were not qualified based on the surrogate non-conformances in the Method 8015D analysis since the applied dilution of 10 times resulted in surrogate concentrations below routinely calibrated levels, and those results were deemed unreliable and possibly inaccurate.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

VALIDATION CRITERIA CHECKLIST

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB-9-30-22, and one equipment blank sample, EB-9-30-22, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration</u> |
|------------------------|---------------|-----------------------|----------------------|
| Trip Blank | 8260B | Total Xylenes | 0.47 µg/L |
| FB-9-30-22 | 8260B | Total Xylenes | 0.47 µg/L |
| EB-9-30-22 | 8260B | Acetone | 7.0 µg/L |
| EB-9-30-22 | 8260B | Total Xylenes | 0.43 µg/L |
| EB-9-30-22 | 200.7 | Dissolved Zinc | 0.0062 mg/L |

Detections of the identified analytes in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of dissolved zinc in the associated samples that were greater than the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of these analytes in the associated samples detection did not require qualification.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples.

Sample DUP-9-30-22 was collected as a field duplicate of sample MW-4.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exception.

The RPD value for dissolved zinc exceeded the data validation limit of 30% at 73.2%. The dissolved zinc results for samples MW-4 and DUP-9-30-22 were assigned J qualifiers due to evidence of poor precision.

22. For laboratory duplicates prepared from project samples, were RPDs within data validation or laboratory QC limits? N/A

Comments: Laboratory duplicates were prepared for the analysis of cyanide in batches WG1937600 and WG1937792 from samples not associated with this data set.

The RPD values for the laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

VALIDATION CRITERIA CHECKLIST

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? N/A

Comments: Target analytes were not reported by more than one method.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
|------------------|----------------|----------------------------|--------------------------------|
| MW-4 | Mercury | ND | 0.000098 |
| MW-4 | Arsenic | 0.00068 | 0.00072 |
| SMW-2 | Arsenic | 0.0019 | 0.0021 |
| OW-59 | Nickel | 0.031 | 0.040 |
| OW-14 | Nickel | 0.067 | 0.078 |
| OW-30 | Nickel | 0.075 | 0.081 |
| SMW-2 | Silver | 0.0057 | 0.0078 |
| OW-59 | Silver | 0.0023 | 0.0048 |
| OW-14 | Silver | ND | 0.0014 |
| EB-9-30-22 | Zinc | ND | 0.0062 |
| MW-4 | Zinc | ND | 0.026 |
| SMW-2 | Zinc | ND | 0.020 |
| OW-59 | Zinc | 0.0091 | 0.014 |
| OW-14 | Zinc | ND | 0.0092 |
| OW-30 | Zinc | ND | 0.016 |
| DUP-9-30-22 | Zinc | ND | 0.056 |

The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

FIELD DUPLICATE SUMMARY

| Client Sample ID: MW-4
Field Duplicate Sample ID: DUP-9-30-22 | | | | |
|--|----------------|-------------------|-------------------|-----------------------------------|
| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
| Barium, Dissolved | E 200.7 | 0.021 mg/L | 0.018 mg/L | 15.4% |
| Barium, Total | E 200.7 | 0.021 mg/L | 0.021 mg/L | 0.0% |
| Chromium, Total | E 200.7 | 0.0036 mg/L | ND (0.0060 mg/L) | DL |
| Zinc, Dissolved | E 200.7 | 0.026 mg/L | 0.056 mg/L | 73.2% |
| Arsenic, Dissolved | E200.8 | 0.00072 mg/L | 0.00073 mg/L | 1.4% +/-RL |
| Arsenic, Total | E200.8 | 0.00068 mg/L | 0.00078 mg/L | 13.7% +/-RL |
| Mercury, Dissolved | E245.1 | 0.000098 mg/L | ND (0.00020 mg/L) | DL |
| TPH DRO | SW8015 | 0.020 mg/L | 0.022 mg/L | 9.5% +/-RL |
| <p>Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.</p> <p>DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).</p> <p>+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.</p> <p>RPD value for dissolved zinc exceeded the data validation limit of 30% at 73.2%, which was evidence of poor precision. The dissolved zinc results were qualified as J for samples MW-4 and DUP-9-30-22.</p> | | | | |

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| EBD | Equipment blank detection |
| ERPD-FD | High field duplicate RPD. |
| ERPD-LCS | The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision. |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| HR-SUR | The surrogate percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-LCS | The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| MBD | Method blank detection |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |
| TBD | Trip blank detection |

| Analyte | Method | Field Sample ID | Lab Sample ID | Result | Limit | Units | Reviewer Qualifier | DV Flag Reasons |

| Reviewer: Charles Ballek, Senior Chemist | |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-9-7-22 | 2209349-001 |
| OW-50 | 2209349-002 |
| OW-52 | 2209349-003 |
| OW-29 | 2209349-004 |
| OW-54 | 2209349-005 |
| OW-66 | 2209349-006 |
| OW-55 | 2209349-007 |
| OW-13 | 2209349-008 |
| OW-56 | 2209349-009 |
| FB-9-7-22 | 2209349-010 |
| DUP-9-7-22 | 2209349-011 |
| Trip Blank | 2209349-012 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 808 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformances related to this data set.

Method 8270C and Method 8270C SIM: 1-methylnaphthalene was reported by EPA Method 8270 instead of EPA Method 8270 SIMs because of its elevated concentration for sample OW-55.

Naphthalene and 2-methylnaphthalene were reported by EPA Method 8270 instead of EPA Method 8270 SIM because of their elevated concentrations for sample OW-66.

Method 8015D DRO: The LCS/LCSD had slightly elevated recoveries.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

D – Sample diluted due to matrix.

J – Analyte detected below quantitation limits.

J – The identification of the analyte is acceptable; the reported value is an estimate.

J6 – The sample matrix interfered with the ability to make any accurate determination; spike value is low.

P1 – RPD value not applicable for sample concentrations less than 5 times the reporting limit.

R – % RPD outside of range.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. The laboratory noted that the shipping containers were sealed, and custody seals were present and intact on the shipping containers.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| Method | Sample(s) | Analyte(s) | Dilution Factor |
|--------|--------------|----------------------------|-----------------|
| 200.7 | OW-66 | Total and Dissolved Barium | 5 |
| 200.8 | OW-54, OW-66 | Total Lead | 5 |
| 8015D | OW-66, OW-55 | TPH DRO and MRO | 5 |
| 8260B | OW-54 | Select VOCs | 5 |
| 8015D | OW-66, OW-55 | TPH GRO | 50 |
| 8260B | OW-54 | MTBE | 50 |
| 8260B | OW-66, OW-55 | Select VOCs | 50 |
| 8260B | OW-29 | MTBE | 100 |
| 8260B | OW-66 | Benzene, Toluene | 500 |
| 8260B | OW-55 | Benzene | 500 |

VALIDATION CRITERIA CHECKLIST

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? No

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.

The CoC requested total and dissolved metals using only Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

6. Were samples received in good condition within method-specified requirements? No

Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ between 0.3°C and 2.9°C as noted on the Sample Log-in Check List. Samples transferred to Pace National were received in good condition with the cooler temperature within the recommended range at 2.9°C as noted on the CoC.

The cooler temperature below 2.0°C was judged as acceptable since the laboratory did not report the sample containers as broken or frozen.

7. Were samples extracted/digested and analyzed within method-specified or technical holding times? Yes

Comments: The samples were extracted/digested and analyzed within method-specific holding times.

8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. Yes

Comments: The results were reported in concentration units of micrograms per liter ($\mu\text{g/L}$) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.

9. Did the laboratory provide any specific initial and/or continuing calibration results? No

Comments: Initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

12. Were target analytes reported as not detected in the laboratory blanks? No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

| Method | Analyte | Batch | Concentration |
|--------|------------|-------|---------------|
| 200.7 | Total Zinc | 70055 | 0.0040 mg/L |
| 8015D | TPH DRO | 70050 | 0.031 mg/L |

Detections of the identified analytes in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of the identified analytes in the associated samples that were greater than the reporting limits but less than or equal to 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentrations did not require qualification.

VALIDATION CRITERIA CHECKLIST

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>MS Sample Source</u> |
|---------------|-----------------------------|--------------|----------------------------|
| 200.7 | Total Metals | 70055 | EB-9-7-22 |
| 200.7 | Dissolved Metals | B91088 | OW-50 |
| 200.8 | Total Metals | 70055 | Not Prepared |
| 200.8 | Dissolved Metals | A91030 | EB-9-7-22, OW-50 |
| 245.1 | Total and Dissolved Mercury | 70231 | DUP-9-7-22 |
| 504.1 | EDB | 70123 | Not Prepared |
| 4500CN E | Cyanide | WG1925221 | Not Associated, OW-50 |
| 4500CN E | Cyanide | WG1925290 | DUP-9-7-22, Not Associated |
| 8015D | TPH DRO and MRO | 70050 | Not Prepared |
| 8015D | TPH GRO | R90998 | Not Prepared |
| 8260B | VOCs | R91002 | OW-50 |
| 8260B | VOCs | R91045 | Not Prepared |
| 8270C SIM | SVOCs | 70053 | Not Prepared |
| 8270C | SVOCs | 70053 | Not Prepared |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? No

Comments: The MS/MSD percent recoveries and RPDs for project samples were within data validation and laboratory QC limits, with the following exceptions.

The MS and MSD recoveries for cyanide in Method 4500CN E batch WG1925221 were outside the laboratory QC limits of 90.0-110% at 78.6% and 79.7%, respectively. However, the recoveries were within data validation limits of 75-125%. Validation action was not required.

The percent recoveries and RPD values for MS/MSDs prepared from non-project samples were evaluated and considered, but data were not qualified based on those results since matrix similarity to project samples could not be guaranteed.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

VALIDATION CRITERIA CHECKLIST

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits | LCS/LCSD RPD | RPD QC Limits |
|-----------|---------------------|-------|--------------|---------------|--------------------|--------------|---------------|
| 200.7 | Total Barium | 70055 | 51.0% | ----- | 70-130% | ----- | ----- |
| 200.7 | Total Nickel | 70055 | 142% | ----- | 70-130% | ----- | ----- |
| 200.7 | Total Zinc | 70055 | 140% | ----- | 70-130% | ----- | ----- |
| 200.8 | Total Selenium | 70055 | 135% | ----- | 70-130% | ----- | ----- |
| 8015D | TPH DRO | 70050 | 91.6% | 84.5% | 31.7-75.4% | Acceptable | 20% |
| 8270C | Pyrene | 70053 | Acceptable | Acceptable | 61-123% | 15.7% | 11.8% |
| 8270C SIM | Naphthalene | 70053 | Acceptable | Acceptable | 21.3-79.9% | 63.4% | 25.6% |
| 8270C SIM | 1-Methylnaphthalene | 70053 | Acceptable | Acceptable | 22.2-80.3% | 64.9% | 25% |
| 8270C SIM | 2-Methylnaphthalene | 70053 | Acceptable | Acceptable | 20.6-80.1% | 68.4% | 25% |
| 8270C SIM | Acenaphthene | 70053 | Acceptable | Acceptable | 29.8-82.7% | 51.7% | 27.8% |
| 8270C SIM | Fluorene | 70053 | Acceptable | Acceptable | 33.3-86% | 32.7% | 26.4% |

Total barium was detected in associated samples in Method 200.7 batch 70055 and the results were assigned J-qualifiers due to evidence of potential low bias. Total barium was not detected in associated sample EB-9-7-22 and the result was assigned a UJ qualifier.

The target analytes total nickel, total selenium, total zinc, and TPH DRO were detected in associated samples, and the results were qualified as J+ based on the evidence of potential high bias. Non-detections of these analytes in the associated samples did not require qualification based on the evidence of potential high bias.

The analytes with LCS/LCSD RPD values that were above the QC limit were qualified as J for detections and UJ for non-detections for the associated samples due to evidence of poor precision.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

The recovery of the Method 8015D surrogate BFB for sample OW-56 was outside the laboratory acceptance range of 70-130% at 951%. TPH GRO was detected in the analysis of sample OW-56, and this result was qualified as J+ to indicate a potential high bias.

Since Method 8270C and 8270C SIM surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the Method 8270C SIM analysis of samples OW-29, OW-54, OW-66, OW-55, OW-13, OW-56, and DUP-9-7-22 and for the Method 8270C analysis of sample OW-66, and qualification of sample data was not required.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB-9-7-22, and one equipment blank sample, EB-9-7-22, were collected as part of this sample set.

VALIDATION CRITERIA CHECKLIST

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration</u> |
|------------------------|---------------|--------------------------|----------------------|
| FB-9-7-22 | 8260B | 2-Butanone | 6.8 µg/L |
| EB-9-7-22 | 8260B | 2-Butanone | 22 µg/L |
| EB-9-7-22 | 8260B | Acetone | 18 µg/L |
| EB-9-7-22 | 8015D | TPH DRO | 0.64 mg/L |
| EB-9-7-22 | 8015D | TPH MRO | 0.91 mg/L |
| EB-9-7-22 | 200.7 | Dissolved Chromium | 0.0025 mg/L |
| EB-9-7-22 | 200.7 | Dissolved Zinc | 0.0046 mg/L |
| EB-9-7-22 | 200.7 | Total Zinc | 0.0062 mg/L |
| EB-9-7-22 | 245.1 | Dissolved Mercury | 0.00019 mg/L |
| EB-9-7-22 | 245.1 | Total Mercury | 0.00018 mg/L |

Detections of TPH DRO, TPH MRO, dissolved mercury, and total mercury in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of 2-butanone, dissolved zinc, and total mercury in the associated samples that were greater than the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples did not require qualification.

The total zinc results in Method 200.7 batch 70055 were previously qualified due to a laboratory blank detection; therefore, additional qualification due to the equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples.

Sample DUP-9-7-22 was collected as a field duplicate of sample OW-52.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exception.

The RPD value for dissolved zinc exceeded the data validation limit of 30% at 70.3%. The dissolved zinc results for samples OW-52 and DUP-9-7-22 were assigned J qualifiers due to evidence of poor precision.

VALIDATION CRITERIA CHECKLIST

22. For laboratory duplicates prepared from project samples, were RPDs within data validation or laboratory QC limits? N/A

Comments: Laboratory duplicates were prepared for these analyses and the laboratory duplicate sample sources are summarized in the following table.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>Laboratory Duplicate Sample Source</u> |
|---------------|-----------------|--------------|---|
| 4500CN E | Cyanide | WG1925221 | Not Associated, EB-9-7-22 |
| 4500CN E | Cyanide | WG1925200 | Not Associated |

Not Associated – The laboratory duplicate sample source was not associated with this project.

The RPD for the laboratory duplicate prepared from a project sample was not applicable since the result for both measurements were non-detections for cyanide and an RPD could not be calculated.

The RPD values for the laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? N/A

Comments: Target analytes were not reported by more than one method in this data set.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
|------------------|----------------|----------------------------|--------------------------------|
| DUP-9-7-22 | Mercury | 0.00015 | 0.00017 |
| EB-9-7-22 | Mercury | 0.00018 | 0.00019 |
| OW-29 | Mercury | 0.00016 | 0.00017 |
| OW-50 | Barium | 0.047 | 0.052 |

| OW-13 | Zinc | ND | 0.031 |
| OW-56 | Zinc | 0.0093 | 0.012 |

The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

FIELD DUPLICATE SUMMARY

| Client Sample ID: OW-52
Field Duplicate Sample ID: DUP-9-7-22 | | | | |
|--|----------------|-------------------|-------------------|-----------------------------------|
| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
| Barium, Dissolved | E 200.7 | 0.029 mg/L | 0.032 mg/L | 9.8% |
| Barium, Total | E 200.7 | 0.038 mg/L | 0.036 mg/L | 5.4% |
| Chromium, Total | E 200.7 | 0.0020 mg/L | 0.0033 mg/L | 49.1% +/-RL |
| Zinc, Dissolved | E 200.7 | 0.012 mg/L | 0.025 mg/L | 70.3% |
| Arsenic, Dissolved | E200.8 | 0.00061 mg/L | 0.00051 mg/L | 17.9% +/-RL |
| Arsenic, Total | E200.8 | 0.00078 mg/L | 0.00064 mg/L | 19.7% +/-RL |
| Lead, Dissolved | E200.8 | ND (0.00050 mg/L) | 0.00013 mg/L | DL |
| Lead, Total | E200.8 | 0.00045 mg/L | 0.00032 mg/L | 33.8% +/-RL |
| Mercury, Dissolved | E245.1 | 0.00019 mg/L | 0.00017 mg/L | 11.1% +/-RL |
| Mercury, Total | E245.1 | 0.00019 mg/L | 0.00015 mg/L | 23.5% +/-RL |
| TPH DRO | SW8015 | 0.029 mg/L | 0.031 mg/L | 6.7% +/-RL |
| MTBE | SW8260B | 4.1 µg/L | 4.2 µg/L | 2.4% |
| <p>Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.</p> <p>DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).</p> <p>+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.</p> <p>RPD value for dissolved zinc exceeded the data validation limit of 30% at 70.3%, which was evidence of poor precision. The dissolved zinc results were qualified as J for samples OW-52 and DUP-9-7-22.</p> | | | | |

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| EBD | Equipment blank detection |
| ERPD-FD | High field duplicate RPD. |
| ERPD-LCS | The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision. |
| FBD | Field blank detection |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| HR-SUR | The surrogate percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-SUR | The surrogate percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| MBD | Method blank detection |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |

| Reviewer: Charles Ballek, Senior Chemist | |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-09-08-22 | 2209441-001 |
| PW-3 | 2209441-002 |
| PW-4 | 2209441-003 |
| EAST LDU | 2209441-004 |
| WEST LDU | 2209441-005 |
| DUP 9-8-22 | 2209441-006 |
| FB 9-8-22 | 2209441-007 |
| TRIP BLANK | 2209441-008 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ⊗ Chromatography (Item 2)
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ✓ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| J- | The result is an estimated concentration, but may be biased low |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |
| R | Rejected, data not usable |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 450 data points. The data completeness calculation does not include any submitted blank sample results. Fourteen data points were rejected. The data completeness measure for this data package is calculated to be 96.89% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformances related to this data set.

Method 8270C and Method 8270C SIM: The recovery for chrysene was low in the LCS/LCSD. This compound is reported in both the 8270 SIM method and the standard 8270 method and is non-detect.

The recovery for 1,4-dioxane was low in the LCSD.

The "S" flagged surrogates for samples "East LDU" and "West LDU" were low due to the emulsive nature of the sample.

Method 8015D DRO: The LCS/LCSD had elevated recoveries.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

E – Estimated value. **Multiple analytes were flagged by the laboratory with the E flag. These results were assigned J qualifiers if detected, and non-detections were assigned UJ due to this lab identified non-conformance. The application of this laboratory flag to QC sample results in the laboratory report did not require qualification.**

J – Analyte detected below quantitation limits.

R – % RPD outside of range.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. The laboratory noted that the shipping containers were sealed, and custody seals were present and intact on the shipping containers.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| Method | Sample(s) | Analyte(s) | Dilution Factor |
|--------|-----------|------------------------------|-----------------|
| 200.7 | East LDU | Total and Dissolved Chromium | 5 |
| 200.7 | East LDU | Total and Dissolved Nickel | 5 |
| 200.7 | West LDU | Dissolved Nickel | 5 |

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? No

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.

The CoC requested total and dissolved metals using only Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

VALIDATION CRITERIA CHECKLIST

6. Were samples received in good condition within method-specified requirements? No

Comments: Samples were received on ice, in good condition, and with the cooler temperatures within the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ at 2.4°C and 3.8°C as noted on the CoC and Sample Log-in Check List. Samples transferred to Pace National were received in good condition with the cooler temperature outside the recommended range at 0.4°C as noted on the CoC.

The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen.

7. Were samples extracted/digested and analyzed within method-specified or technical holding times? Yes

Comments: The samples were extracted/digested and analyzed within method-specific holding times.

8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. Yes

Comments: The results were reported in concentration units of micrograms per liter ($\mu\text{g/L}$) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.

9. Did the laboratory provide any specific initial and/or continuing calibration results? No

Comments: Initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

12. Were target analytes reported as not detected in the laboratory blanks? No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

| Method | Analyte | Batch | Concentration |
|--------|----------------|-------|---------------|
| 200.7 | Total Barium | 70092 | 0.0018 mg/L |
| 200.8 | Total Antimony | 70092 | 0.00063 mg/L |
| 200.8 | Total Lead | 70092 | 0.00040 mg/L |
| 8015D | TPH DRO | 70105 | 0.052 mg/L |

Detections of total lead and TPH DRO in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of total barium and total lead in the associated samples that were greater than the reporting limits but less than or equal to 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

VALIDATION CRITERIA CHECKLIST

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>MS Sample Source</u> |
|---------------|-----------------------------|--------------|-------------------------|
| 200.7 | Total Metals | 70092 | DUP 9-8-22 |
| 200.7 | Dissolved Metals | B91088 | Not Prepared |
| 200.8 | Total Metals | 70092 | Not Prepared |

| 8270C SIM | SVOCs | 70094 | Not Prepared |
| 8270C | SVOCs | 70094 | Not Prepared |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The MS/MSD percent recoveries and RPDs for project samples were within data validation and laboratory QC limits.

The percent recoveries and RPD values for MS/MSDs prepared from non-project samples were evaluated and considered, but data were not qualified based on those results since matrix similarity to project samples could not be guaranteed.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

VALIDATION CRITERIA CHECKLIST

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits?

No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits | LCS/LCSD RPD | RPD QC Limits |
|-----------|----------------|-------|--------------|---------------|--------------------|--------------|---------------|
| 200.8 | Total Antimony | 70092 | 144% | ----- | 70-130% | ----- | ----- |
| 8015D | TPH DRO | 70105 | 81.4% | 120% | 31.7-75.4% | 38.5% | 20% |
| 8270C | Pyrene | 70094 | Acceptable | Acceptable | 61-123% | 32.8% | 11.8% |
| 8270C SIM | 1,4-Dioxane | 70094 | Acceptable | 20.0% | 20.2-48.4% | Acceptable | 30.1% |
| 8270C SIM | Chrysene | 70094 | 51.0% | 48.0% | 55.3-115% | Acceptable | 20% |

Total antimony was not detected in the associated samples in Method 200.8 batch 70092 and qualification of the results was not required based on the evidence of potential high bias.

The target analyte TPH DRO was detected in associated samples, and the results were qualified as J+ based on the evidence of potential high bias.

The analytes with LCS/LCSD RPD values that exceeded the QC limit were qualified as J for detections and UJ for non-detections for the associated samples due to evidence of poor precision.

Non-detections of 1,4-dioxane and chrysene were qualified as UJ, and the detections of 1,4-dioxane in samples East LDU and West LDU were qualified as J-, due to evidence of low bias.

17. Were surrogate recoveries within laboratory QC limits?

No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

| Method | Surrogate | Sample | Surrogate Recovery | QC Limits |
|-----------|-----------------------------|-------------|--------------------|-----------|
| 8015D | BFB | East LDU | 166% | 70-130% |
| 8270C | 2-Fluorophenol | East LDU | 0.745% | 15-84.5% |
| 8270C | Phenol-d ₅ | East LDU | 2.53% | 15-67% |
| 8270C | 2,4,6-Tribromophenol | East LDU | 4.59% | 15-108% |
| 8270C | 2-Fluorophenol | West LDU | 1.54% | 15-84.5% |
| 8270C | Phenol-d ₅ | West LDU | 0.0% | 15-67% |
| 8270C | 2,4,6-Tribromophenol | West LDU | 5.29% | 15-108% |
| 8270C-SIM | 4-Terphenyl-d ₁₄ | EB-09-08-22 | 62.3% | 72-147% |
| 8270C-SIM | 4-Terphenyl-d ₁₄ | PW-3 | 63.6% | 72-147% |
| 8270C-SIM | 4-Terphenyl-d ₁₄ | PW-4 | 65.7% | 72-147% |
| 8270C-SIM | 4-Terphenyl-d ₁₄ | EAST LDU | 53.5% | 72-147% |
| 8270C-SIM | 4-Terphenyl-d ₁₄ | WEST LDU | 55.8% | 72-147% |
| 8270C-SIM | 4-Terphenyl-d ₁₄ | DUP 9-8-22 | 45.9% | 72-147% |

TPH GRO was detected in the Method 8015D analysis of sample East LDU, and this result was qualified as J+ to indicate a potential high bias.

The associated analytes in the acid fraction of samples East LDU and West LDU were not detected. Since these surrogates recovered at less than 10%, these associated results were qualified as R indicating rejected results, data not usable due to evidence of extreme low bias.

Since Method 8270C and 8270C SIM surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same

VALIDATION CRITERIA CHECKLIST

fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the Method 8270C SIM analysis of samples EB-09-08-22, PW-3, PW-4, East LDU, West LDU, and DUP 9-8-22, and qualification of sample data was not required.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, TRIP BLANK, one field blank sample, FB 9-8-22, and one equipment blank sample, EB-9-8-22, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration</u> |
|------------------------|---------------|---------------------------|----------------------|
| TRIP BLANK | 8260B | Methylene Chloride | 4.8 µg/L |
| FB 9-8-22 | 8260B | 2-Butanone | 29 µg/L |
| FB 9-8-22 | 8260B | Acetone | 20 µg/L |
| EB-9-8-22 | 8260B | Dissolved Zinc | 0.0067 mg/L |
| EB-9-8-22 | 245.1 | Dissolved Mercury | 0.00012 mg/L |
| EB-9-8-22 | 245.1 | Total Mercury | 0.00017 mg/L |
| EB-9-8-22 | 8015D | TPH DRO | 0.058 mg/L |
| EB-9-8-22 | 8260B | Acetone | 8.3 µg/L |

Detections of the identified analytes in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of the identified analytes in the associated samples that were greater than the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of these analytes in the associated samples and results greater than 10 times the blank detection did not require qualification.

The TPH DRO results for the samples in batch 70105 were previously qualified due to a laboratory blank detection; therefore, additional qualification due to the equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples.

Sample DUP 9-8-22 was collected as a field duplicate of sample PW-3.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? Yes

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples.

VALIDATION CRITERIA CHECKLIST

22. For laboratory duplicates prepared from project samples, were RPDs within data validation or laboratory QC limits? N/A

Comments: Laboratory duplicates were prepared for the analysis of cyanide in batch WG1925290 from samples not associated with this data set.

The RPD values for the laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? Yes

Comments: The target analyte chrysene was reported by both Method 8270C and Method 8270C SIM. This analyte was reported as not detected by both methods.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
|------------------|----------------|----------------------------|--------------------------------|
| DUP 9-8-22 | Mercury | 0.00015 | 0.00018 |
| East LDU | Arsenic | ND | 0.00079 |
| PW-3 | Barium | 0.010 | 0.011 |
| East LDU | Beryllium | 0.0014 | 0.0020 |
| West LDU | Beryllium | ND | 0.0013 |
| East LDU | Cobalt | 0.027 | 0.028 |
| East LDU | Nickel | 2.4 | 2.5 |
| West LDU | Nickel | 0.99 | 1.1 |
| PW-3 | Selenium | 0.00077 | 0.0010 |
| East LDU | Selenium | ND | 0.00045 |
| West LDU | Selenium | ND | 0.00070 |
| PW-3 | Silver | 0.0019 | 0.0058 |
| PW-4 | Silver | ND | 0.0037 |
| DUP 9-8-22 | Silver | ND | 0.0056 |
| PW-3 | Vanadium | ND | 0.0024 |
| PW-4 | Vanadium | ND | 0.0024 |
| DUP 9-8-22 | Vanadium | ND | 0.0026 |
| EB-09-08-22 | Zinc | ND | 0.0067 |
| PW-3 | Zinc | 0.0087 | 0.021 |
| PW-4 | Zinc | ND | 0.042 |
| DUP 9-8-22 | Zinc | ND | 0.016 |

The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

FIELD DUPLICATE SUMMARY

| Client Sample ID: PW-3
Field Duplicate Sample ID: DUP 9-8-22 | | | | |
|--|---------|-------------------|------------------|-----------------------------------|
| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
| Barium, Dissolved | E 200.7 | 0.011 mg/L | 0.01 mg/L | 9.5% |
| Barium, Total | E 200.7 | 0.010 mg/L | 0.011 mg/L | 9.5% |
| Cobalt, Total | E 200.7 | 0.013 mg/L | 0.013 mg/L | 0.0% |
| Silver, Dissolved | E 200.7 | 0.0058 mg/L | 0.0056 mg/L | 3.5% +/-RL |
| Silver, Total | E 200.7 | 0.0019 mg/L | ND (0.0050 mg/L) | DL |
| Vanadium, Dissolved | E 200.7 | 0.0024 mg/L | 0.0026 mg/L | 8.0% +/-RL |

| Arsenic, Dissolved | E200.8 | 0.00013 mg/L | 0.00024 mg/L | 59.5% +/-RL |
| Arsenic, Total | E200.8 | 0.0038 mg/L | 0.0041 mg/L | 7.6% |
| Lead, Total | E200.8 | 0.00007 mg/L | 0.00013 mg/L | 60.0% +/-RL |
| Selenium, Dissolved | E200.8 | 0.0010 mg/L | 0.00071 mg/L | 33.9% +/-RL |
| Selenium, Total | E200.8 | 0.00077 mg/L | 0.0012 mg/L | 43.7% +/-RL |
| Mercury, Dissolved | E245.1 | 0.00017 mg/L | 0.00018 mg/L | 5.7% +/-RL |
| Mercury, Total | E245.1 | 0.00018 mg/L | 0.00015 mg/L | 18.2% +/-RL |
| TPH DRO | SW8015 | 0.058 mg/L | 0.047 mg/L | 21.0% +/-RL |
| Acetone | SW8260B | 7.9 µg/L | 7.1 µg/L | 10.7% +/-RL |
| Methylene Chloride | SW8260B | ND (3.0 µg/L) | 2.6 µg/L | DL |
| <p>Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.</p> <p>DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).</p> <p>+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.</p> | | | | |

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| EBL | Flagged as estimated by the laboratory. |
| MBD | Method blank detection |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-LCS | The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| ERPD-LCS | The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision. |
| HR-SUR | The surrogate percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-SUR | The surrogate percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| FBD | Field blank detection |
| EBD | Equipment blank detection |
| TBD | Trip blank detection |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |

| Analyte | Method | Field Sample ID | Lab Sample ID | Result | Limit | Units | Reviewer Qualifier | DV Flag Reasons |
|------------------------|---------|-----------------|---------------|--------|-------|-------|--------------------|--------------------|

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

Tier II Data Validation Report Summary

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-9-9-22 | 2209478-001 |
| STP-1 to EP-2 | 2209478-002 |
| EP-2 | 2209478-003 |
| FB-9-9-22 | 2209478-004 |
| DUP 9-9-22 | 2209478-005 |
| Trip Blank | 2209478-006 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ⊗ Laboratory Qualifiers (Item 2)
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ✓ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| J- | The result is an estimated concentration, but may be biased low |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 279 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformances related to this data set.

Method 8270C and Method 8270C SIM: The recovery for chrysene was low in the LCS/LCSD. This compound is reported in both the 8270 SIM method and the standard 8270 method and is non-detect.

The recovery for 1,4-dioxane was low in the LCSD.

Method 8015D DRO: The LCS/LCSD had elevated recoveries.

Method 5210B: For sample EP-2, the RPD between bottles was greater than 30%.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

D – Sample diluted due to matrix.

E – Estimated value. **Multiple analytes were flagged by the laboratory with the E flag for samples EB-9-9-22, STP-1 to EP-2, EP-2, and DUP 9-9-22. These results were assigned J qualifiers if detected and non-detections were assigned UJ due to this non-conformance. Note that the BOD result for sample STP-1 to EP-2 was reported as >67.56 mg/L in the laboratory report; however, the result could not be reported as >67.56 mg/L in Project Direct due to limitations of the data management system.**

H – Holding times for preparation or analysis exceeded

J – Analyte detected below quantitation limits.

J6 – The sample matrix interfered with the ability to make any accurate determination; spike value is low.

P1 – RPD value not applicable for sample concentrations less than 5 times the reporting limit.

R – % RPD outside of range.

R – RPD between bottles >30%. **This laboratory flag was applied to the BOD result for sample EP-2. This result was assigned a J qualifier to indicate an estimated result due to evidence of poor precision.**

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. The laboratory noted that the shipping containers were sealed, and custody seals were present and intact on the shipping containers.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| Method | Sample(s) | Analyte(s) | Dilution Factor |
|-----------|---------------------------------|------------|-----------------|
| 8270C | STP-1 to EP-2, EP-2, DUP 9-9-22 | SVOC | 10 |
| 8270C SIM | STP-1 to EP-2, EP-2, DUP 9-9-22 | SVOC | 10 |
| 9223B | STP-1 to EP-2, EP-2, DUP 9-9-22 | E. Coli | 10 |

| VALIDATION CRITERIA CHECKLIST | |
|--|-----|
| 5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? | No |
| <p>Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.</p> <p>The CoC requested total and dissolved metals using only Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> <p>The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> | |
| 6. Were samples received in good condition within method-specified requirements? | No |
| <p>Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ between -0.5°C and 5.8°C as noted on the CoC and Sample Log-in Check List. Samples transferred to Pace National were received in good condition with the cooler temperature outside the recommended range at 0.4°C as noted on the CoC.</p> <p>The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen.</p> | |
| 7. Were samples extracted/digested and analyzed within method-specified or technical holding times? | Yes |
| Comments: The samples were extracted/digested and analyzed within method-specific holding times. | |
| 8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. | Yes |
| Comments: The results were reported in concentration units of micrograms per liter ($\mu\text{g/L}$), milligrams per liter (mg/L), and most probable number per 100 milliliters (MPN/ 100mL), which were acceptable for the sample matrix and the analyses requested. | |
| 9. Did the laboratory provide any specific initial and/or continuing calibration results? | No |
| Comments: Initial and continuing calibration data were not included as part of this data set. | |
| 10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? | N/A |
| Comments: Initial and continuing calibration data were not included as part of this data set. | |
| 11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | Yes |
| Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples. | |

VALIDATION CRITERIA CHECKLIST

12. Were target analytes reported as not detected in the laboratory blanks? No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

| Method | Analyte | Batch | Concentration |
|--------|----------------|-------|---------------|
| 200.7 | Total Barium | 70092 | 0.0018 mg/L |
| 200.8 | Total Antimony | 70092 | 0.00063 mg/L |
| 200.8 | Total Lead | 70092 | 0.00040 mg/L |
| 8015D | TPH DRO | 70105 | 0.052 mg/L |

Detections of total lead and TPH DRO in the associated samples that were less than the blank results and less than the applicable reporting limits were assigned U qualifiers. Detections of total antimony and TPH DRO in the associated samples that were greater than the reporting limits but less than or equal to 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| Method | Analytes | Batch | MS Sample Source |
|-----------|-----------------------------|-----------|------------------|
| 200.7 | Total Metals | 70092 | Not Prepared |
| 200.7 | Dissolved Metals | B91139 | EB-9-9-22 |
| 200.8 | Total Metals | 70092 | DUP 9-9-22 |
| 200.8 | Dissolved Metals | B91030 | Not Prepared |
| 245.1 | Total and Dissolved Mercury | 70232 | EP-2 |
| 410.4 | COD | WG1931912 | Not Associated |
| 504.1 | EDB | 70173 | Not Prepared |
| 4500CN E | Cyanide | WG1925290 | Not Associated |
| 4500CN E | Cyanide | WG1928505 | Not Associated |
| 5210B | BOD | 70067 | Not Prepared |
| 8015D | TPH DRO and MRO | 70105 | Not Prepared |
| 8015D | TPH GRO | A91113 | Not Prepared |
| 8015D | TPH GRO | B91113 | DUP 9-9-22 |
| 8260B | VOCs | R90977 | Not Prepared |
| 8270C SIM | SVOCs | 70094 | Not Prepared |
| 8270C | SVOCs | 70094 | Not Prepared |
| 9223B | E.Coli | 70088 | Not Prepared |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

VALIDATION CRITERIA CHECKLIST

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The MS/MSD percent recoveries and RPDs for project samples were within data validation and laboratory QC limits.

The percent recoveries and RPD values for MS/MSDs prepared from non-project samples were evaluated and considered, but data were not qualified based on those results since matrix similarity to project samples could not be guaranteed.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits | LCS/LCSD RPD | RPD QC Limits |
|-----------|------------------|--------|--------------|---------------|--------------------|--------------|---------------|
| 200.7 | Dissolved Barium | B91139 | 135% | ----- | 70-130% | ----- | ----- |
| 200.8 | Total Antimony | 70092 | 144% | ----- | 70-130% | ----- | ----- |
| 8015D | TPH DRO | 70105 | 81.4% | 120% | 31.7-75.4% | 38.5% | 20% |
| 8270C | Pyrene | 70094 | Acceptable | Acceptable | 61-123% | 32.8% | 11.8% |
| 8270C SIM | 1,4-Dioxane | 70094 | Acceptable | 20.0% | 20.2-48.4% | Acceptable | 30.1% |
| 8270C SIM | Chrysene | 70094 | 51.0% | 48.0% | 55.3-115% | Acceptable | 20.0% |
| 5210B | BOD | 70067 | 84.3% | ----- | 84.6-115.4% | ----- | ----- |

The target analytes dissolved barium and total antimony were detected in associated samples, and the results were qualified as J+ based on the evidence of potential high bias. Non-detections of these analytes in the associated samples did not require qualification based on the evidence of potential high bias.

The analytes with LCS/LCSD RPD values that exceeded the QC limit were assigned J qualifiers for detections and UJ for non-detections for the associated samples due to evidence of poor precision.

The target analytes 1,4-dioxane, chrysene, and BOD were not detected in associated samples, and the results were qualified as UJ based on the evidence of potential low bias. Detections of BOD in the associated samples EP-2 and DUP 9-9-22 were qualified as J- due to the evidence of potential low bias.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

Since Method 8270C and 8270C SIM surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the Method 8270C SIM analysis of sample EB-9-9-22, and qualification of sample data was not required.

The SVOC results for samples STP-1 to EP-2, EP-2, and DUP 9-9-22 were not qualified based on the surrogate non-conformances in the Method 8270C and Method 8270C SIM analyses since the applied dilution of 10 times resulted in surrogate concentrations below routinely calibrated levels, and those results were deemed unreliable and possibly inaccurate.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

VALIDATION CRITERIA CHECKLIST

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB-9-9-22, and one equipment blank sample, EB-9-9-22, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| Blank Sample ID | Method | Analyte | Concentration |
|-----------------|--------|--------------------|---------------|
| Trip Blank | 8260B | Acetone | 6.9 µg/L |
| EB-9-9-22 | 200.7 | Dissolved Vanadium | 0.0019 mg/L |
| EB-9-9-22 | 200.7 | Dissolved Zinc | 0.0065 mg/L |
| EB-9-9-22 | 245.1 | Dissolved Mercury | 0.00018 mg/L |
| EB-9-9-22 | 245.1 | Total Mercury | 0.00019 mg/L |
| EB-9-9-22 | 410.4 | COD | 44.7 mg/L |
| EB-9-9-22 | 8015D | TPH DRO | 0.043 mg/L |
| EB-9-9-22 | 8260B | Acetone | 8.70 µg/L |

Detections of the identified analytes in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of the identified analytes in the associated samples that were greater than the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples did not require qualification.

The TPH DRO results for the samples in batch 70105 were previously qualified due to a laboratory blank detection; therefore, additional qualification due to the equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples.

Sample DUP 9-9-22 was collected as a field duplicate of sample STP-1 to EP-2.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exceptions.

The RPD value for dissolved zinc exceeded the data validation limit of 30% at 51.0%. The dissolved zinc results for samples STP-1 to EP-2 and DUP 9-9-22 were assigned J qualifiers due to evidence of poor precision.

An RPD value could not be calculated for BOD for the field duplicate pair STP-1 to EP-2 and DUP 9-9-22 since the analyte was detected in the duplicate sample and the concentration was uncertain in the parent sample. As the detection in the duplicate sample was greater than two times the reporting limit, BOD was qualified as J for both the duplicate and parent samples.

VALIDATION CRITERIA CHECKLIST

22. For laboratory duplicates prepared from project samples, were RPDs within data validation or laboratory QC limits? Yes

Comments: Laboratory duplicates were prepared for these analyses, and the laboratory duplicate sample sources are summarized in the following table.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>Laboratory Duplicate Sample Source</u> |
|---------------|-----------------|--------------|---|
| 410.4 | COD | WG1931912 | EB 9-9-22, Not Associated |
| 4500CN E | Cyanide | WG1925290 | Not Associated |
| 4500CN E | Cyanide | WG1928505 | EP-2, Not Associated |

Not Associated – The laboratory duplicate sample source was not associated with this project.

The RPDs for laboratory duplicates prepared from project samples were within laboratory acceptance limits or were not applicable since the results for one or both measurements were within 5 times the reporting limit.

The RPD values for the laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? Yes

Comments: The target analyte chrysene was reported by both Method 8270C and Method 8270C SIM. This analyte was reported as not detected by both methods.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
|------------------|----------------|----------------------------|--------------------------------|
| STP-1 to EP-2 | Antimony | ND | 0.00065 |
| DUP 9-9-22 | Antimony | ND | 0.00058 |
| EP-2 | Nickel | 0.037 | 0.038 |
| EP-2 | Selenium | 0.0011 | 0.0016 |
| STP-1 to EP-2 | Silver | 0.0022 | 0.0051 |
| EP-2 | Silver | 0.0042 | 0.010 |
| DUP 9-9-22 | Silver | 0.0020 | 0.0055 |
| EB-9-9-22 | Vanadium | ND | 0.0019 |
| STP-1 to EP-2 | Vanadium | ND | 0.0043 |
| EP-2 | Vanadium | ND | 0.0068 |
| DUP 9-9-22 | Vanadium | ND | 0.0037 |
| EB-9-9-22 | Zinc | ND | 0.0065 |
| STP-1 to EP-2 | Zinc | 0.022 | 0.032 |
| EP-2 | Zinc | ND | 0.0059 |

The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

FIELD DUPLICATE SUMMARY

| Client Sample ID: STP-1 to EP-2
Field Duplicate Sample ID: DUP 9-9-22 | | | | |
|---|------------------|-----------------------------|-------------------|-----------------------------------|
| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
| Barium, Dissolved | E 200.7 | 0.024 mg/L | 0.025 mg/L | 4.1% |
| Barium, Total | E 200.7 | 0.032 mg/L | 0.03 mg/L | 6.5% |
| Cobalt, Total | E 200.7 | 0.013 mg/L | 0.012 mg/L | 8.0% |
| Silver, Dissolved | E 200.7 | 0.0051 mg/L | 0.0055 mg/L | 7.5% +/-RL |
| Silver, Total | E 200.7 | 0.0022 mg/L | 0.0020 mg/L | 9.5% +/-RL |
| Vanadium, Dissolved | E 200.7 | 0.0043 mg/L | 0.0037 mg/L | 15.0% +/-RL |
| Zinc, Dissolved | E 200.7 | 0.032 mg/L | 0.019 mg/L | 51.0% |
| Zinc, Total | E 200.7 | 0.022 mg/L | 0.025 mg/L | 12.8% |
| Antimony, Dissolved | E200.8 | 0.00065 mg/L | 0.00058 mg/L | 11.4% +/-RL |
| Arsenic, Dissolved | E200.8 | 0.0021 mg/L | 0.0023 mg/L | 9.1% |
| Arsenic, Total | E200.8 | 0.0025 mg/L | 0.0025 mg/L | 0.0% |
| Lead, Total | E200.8 | 0.00015 mg/L | 0.00016 mg/L | 6.5% +/-RL |
| Selenium, Dissolved | E200.8 | 0.0011 mg/L | 0.0013 mg/L | 16.7% +/-RL |
| Selenium, Total | E200.8 | 0.0011 mg/L | 0.0018 mg/L | 48.3% +/-RL |
| Mercury, Dissolved | E245.1 | 0.00018 mg/L | 0.00018 mg/L | 0.0% +/-RL |
| Mercury, Total | E245.1 | 0.00022 mg/L | 0.00024 mg/L | 8.7% +/-RL |
| COD | 410.4 | 190 mg/L | 181 mg/L | 4.9% |
| BOD | SM 5210 B | >67.56 (2.0 mg/L) | 47 mg/L | DL |
| TPH DRO | SW8015 | 0.18 mg/L | 0.20 mg/L | 10.5% |
| TPH ORO | SW8015 | 0.11 mg/L | 0.13 mg/L | 16.7% +/-RL |
| Acetone | SW8260B | 8.7 µg/L | 7.0 µg/L | 21.7% +/-RL |
| <p>Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.</p> <p>DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).</p> <p>+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.</p> <p>The RPD value for dissolved zinc exceeded the data validation limit of 30% at 51.0%, which was evidence of poor precision. The dissolved zinc results were qualified as J for samples STP-1 to EP-2 and DUP 9-9-22.</p> <p>An RPD value could not be calculated for BOD for the field duplicate pair STP-1 to EP-2 and DUP 9-9-22 since the analyte was detected in the duplicate sample and the concentration was uncertain in the parent sample. As the detection in the duplicate sample was greater than two times the reporting limit, BOD was qualified as J for both the duplicate and parent samples.</p> | | | | |

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| EBD | Equipment blank detection |
| EBL | Flagged as estimated by the laboratory. |
| ERPD-FD | High field duplicate RPD. |
| ERPD-LCS | The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision. |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-LCS | The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| MBD | Method blank detection |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |
| OTHER | Other |
| TBD | Trip blank detection |

| Analyte | Method | Field Sample ID | Lab Sample ID | Result | Limit | Units | Reviewer Qualifier | DV Flag Reasons |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-09-13-22 | 2209635-001 |
| MKTF-46 | 2209635-002 |
| MKTF-18R | 2209635-003 |
| MKTF-38 | 2209635-004 |
| MKTF-40 | 2209635-005 |
| MKTF-31 | 2209635-006 |
| FB 9-13-22 | 2209635-007 |
| DUP-9-13-22 | 2209635-008 |
| Trip Blank | 2209635-009 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ⊗ Laboratory Identified Issues (Item 1)
- ⊗ Laboratory Qualifiers (Item 2)
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| J- | The result is an estimated concentration, but may be biased low |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 540 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST

| 1. Was the report free of non-conformances identified by the laboratory? | No | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
|--|-----------|----------------------------|-----------------|------------|-----------------|-------|---------|-------------|---|-------|----------|----------------------------|---|-------|----------|-------------|----|-------|----------|---------|----|-------|---------|------|----|-------|----------|---------|-----|
| <p>Comments: The laboratory noted the following analytical non-conformances related to this data set.</p> <p><u>Method 8270C and Method 8270C SIM</u>: Naphthalene, 1-methylnaphthalene, and 2-methylnaphthalene were reported by EPA Method 8270 instead of EPA Method 8270 SIM because of its elevated concentration for sample MKTF-18R.</p> <p>For sample MKTF-31, the analyte 1,4 dioxane is E flagged because the result is above the calibration range of the curve.</p> <p>The target analyte 1,4-dioxane that was flagged by the laboratory with the E flag for sample MKTF-31 was assigned a J qualifiers to indicate an estimated concentration.</p> <p><u>Method 8015D DRO</u>: The LCS had slightly elevated recovery. The LCSD had acceptable recoveries.</p> | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 2. Were the data free of data qualification flags and/or notes used by the laboratory?
If no, define. | No | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| <p>Comments: The laboratory used the following data qualification flags with this data set.</p> <p>E – Estimated value. TPH DRO and TPH MRO were flagged by the laboratory with the E flag in multiple samples. These results were assigned J qualifiers if detected, and non-detections were assigned UJ due to this laboratory identified non-conformance.</p> <p>J – Analyte detected below quantitation limits.</p> <p>J – The identification of the analyte is acceptable; the reported value is an estimate.</p> <p>R – % RPD outside of range.</p> <p>S – % Recovery outside of range due to dilution or matrix interference.</p> <p>* – Value exceeds maximum contaminant level.</p> | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 3. Were sample CoC forms and custody procedures complete? | Yes | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| <p>Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present because the samples were transferred to a laboratory field courier service for transport from the field to the laboratory, and custody was maintained at all times.</p> | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? | Yes | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| <p>Comments: The detection limits appeared to be acceptable. The following dilutions were applied.</p> <table border="1"> <thead> <tr> <th>Method</th> <th>Sample(s)</th> <th>Analyte(s)</th> <th>Dilution Factor</th> </tr> </thead> <tbody> <tr> <td>8260B</td> <td>MKTF-31</td> <td>Select VOCs</td> <td>2</td> </tr> <tr> <td>200.7</td> <td>MKTF-18R</td> <td>Total and Dissolved Barium</td> <td>5</td> </tr> <tr> <td>8260B</td> <td>MKTF-18R</td> <td>Select VOCs</td> <td>10</td> </tr> <tr> <td>8015D</td> <td>MKTF-18R</td> <td>TPH GRO</td> <td>20</td> </tr> <tr> <td>8260B</td> <td>MKTF-31</td> <td>MTBE</td> <td>20</td> </tr> <tr> <td>8260B</td> <td>MKTF-18R</td> <td>Benzene</td> <td>100</td> </tr> </tbody> </table> | | Method | Sample(s) | Analyte(s) | Dilution Factor | 8260B | MKTF-31 | Select VOCs | 2 | 200.7 | MKTF-18R | Total and Dissolved Barium | 5 | 8260B | MKTF-18R | Select VOCs | 10 | 8015D | MKTF-18R | TPH GRO | 20 | 8260B | MKTF-31 | MTBE | 20 | 8260B | MKTF-18R | Benzene | 100 |
| Method | Sample(s) | Analyte(s) | Dilution Factor | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 8260B | MKTF-31 | Select VOCs | 2 | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 200.7 | MKTF-18R | Total and Dissolved Barium | 5 | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 8260B | MKTF-18R | Select VOCs | 10 | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 8015D | MKTF-18R | TPH GRO | 20 | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 8260B | MKTF-31 | MTBE | 20 | | | | | | | | | | | | | | | | | | | | | | | | | | |
| 8260B | MKTF-18R | Benzene | 100 | | | | | | | | | | | | | | | | | | | | | | | | | | |

| VALIDATION CRITERIA CHECKLIST | |
|--|-----|
| 5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? | No |
| <p>Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.</p> <p>The CoC requested total and dissolved metals using only Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> <p>The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> | |
| 6. Were samples received in good condition within method-specified requirements? | No |
| <p>Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ between 0.4°C and 4.7°C as noted on the CoC and Sample Log-in Check List. Samples transferred to Pace National were received in good condition with the cooler temperature within the recommended range at 2.1°C as noted on the CoC.</p> <p>The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen.</p> | |
| 7. Were samples extracted/digested and analyzed within method-specified or technical holding times? | Yes |
| Comments: The samples were extracted/digested and analyzed within method-specific holding times. | |
| 8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. | Yes |
| Comments: The results were reported in concentration units of micrograms per liter ($\mu\text{g/L}$) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested. | |
| 9. Did the laboratory provide any specific initial and/or continuing calibration results? | No |
| Comments: Initial and continuing calibration data were not included as part of this data set. | |
| 10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? | N/A |
| Comments: Initial and continuing calibration data were not included as part of this data set. | |
| 11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | Yes |
| Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples. | |

VALIDATION CRITERIA CHECKLIST

12. Were target analytes reported as not detected in the laboratory blanks? No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

| Method | Analyte | Batch | Concentration |
|--------|-----------------------------|-------|---------------|
| 200.7 | Total Zinc | 70179 | 0.0056 mg/L |
| 245.1 | Total and Dissolved Mercury | 70278 | 0.00012 mg/L |
| 8015D | TPH DRO | 70190 | 0.030 mg/L |

Detections of the identified analytes in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of total zinc and TPH DRO in the associated samples that were greater than the reporting limits but less than or equal to 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| Method | Analytes | Batch | MS Sample Source |
|-----------|-----------------------------|-----------|------------------|
| 200.7 | Total Metals | 70179 | Not Prepared |
| 200.7 | Dissolved Metals | C91139 | EB-09-13-22 |
| 200.8 | Total Metals | 70179 | DUP-9-13-22 |
| 200.8 | Dissolved Metals | C91078 | Not Prepared |
| 245.1 | Total and Dissolved Mercury | 70278 | Not Prepared |
| 504.1 | EDB | 70173 | EB-09-13-22 |
| 4500CN E | Cyanide | WG1928511 | Not Associated |
| 8015D | TPH DRO and MRO | 70190 | Not Prepared |
| 8015D | TPH GRO | A91113 | MKTF-46 |
| 8260B | VOCs | R91021 | Not Prepared |
| 8260B | VOCs | R91060 | Not Prepared |
| 8260B | VOCs | R91090 | Not Prepared |
| 8270C SIM | SVOCs | 70174 | Not Prepared |
| 8270C | SVOCs | 70174 | Not Prepared |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The MS/MSD percent recoveries and RPDs for project samples were within data validation and laboratory QC limits.

The percent recoveries and RPD values for MS/MSDs prepared from non-project samples were evaluated and considered, but data were not qualified based on those results since matrix similarity to project samples could not be guaranteed.

VALIDATION CRITERIA CHECKLIST

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits | LCS/LCSD RPD | RPD QC Limits |
|--------|--------------------|--------|--------------|---------------|--------------------|--------------|---------------|
| 200.8 | Dissolved Selenium | C91078 | 62.2% | ----- | 70-130% | ----- | ----- |
| 8015D | TPH DRO | 70190 | 89.3% | Acceptable | 31.7-75.4% | 25.3% | 20% |

Detections of dissolved selenium in the associated samples were qualified as J-, and non-detections of this analyte were qualified as UJ due to the evidence of potential low bias.

TPH DRO was detected in the associated samples. These results were qualified as J due to evidence of poor precision and as J+ due to the evidence of high bias.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

The recovery of the surrogate BFB for sample MKTF-38 was outside the laboratory acceptance range of 70-130% at 162%. TPH GRO was detected in the Method 8015D analysis of samples MKTF-38, and this result was qualified as J+ to indicate a potential high bias.

Since Method 8270C and 8270C SIM surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the Method 8270C SIM analysis of samples MKTF-46, MKTF-18R, MKTF-38, MKTF-40, MKTF-31, and DUP-9-13-22 or the Method 8270C analysis of sample MKTF-40, and qualification of sample data was not required.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB 9-13-22, and one equipment blank sample, EB-09-13-22, were collected as part of this sample set.

VALIDATION CRITERIA CHECKLIST

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration</u> |
|------------------------|------------------|-----------------------|----------------------|
| FB 9-13-22 | 8260B | 2-Butanone | 12 µg/L |
| FB 9-13-22 | 8260B | Acetone | 16 µg/L |
| EB-09-13-22 | 8260B | 2-Butanone | 11 µg/L |
| EB-09-13-22 | 8260B | Acetone | 14 µg/L |
| EB-09-13-22 | 8270C SIM | 1,4-Dioxane | 0.16 µg/L |
| EB-09-13-22 | 8015D | TPH DRO | 0.030 mg/L |
| EB-09-13-22 | 200.7 | Dissolved Zinc | 0.0064 mg/L |

Detections of the identified analytes in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of acetone and dissolved zinc in the associated samples that were greater than the reporting limits but less than or equal to 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

The TPH DRO results for the samples in batch 70190 were previously qualified due to a laboratory blank detection; therefore, additional qualification due to the equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples.

Sample DUP-9-13-22 was collected as a field duplicate of sample MKTF-46.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exceptions.

The RPD values for 1,4-dioxane and total cobalt exceeded the data validation limit of 30% at 72.7% and 40.7%, respectively, which was evidence of poor precision. The 1,4-dioxane and total cobalt results were qualified as J for samples MKTF-46 and DUP 9-13-22.

22. For laboratory duplicates prepared from project samples, were RPDs within data validation or laboratory QC limits? N/A

Comments: Laboratory duplicates were prepared for the analysis of cyanide in batch WG1928511 from a sample not associated with this data set.

The RPD value for the laboratory duplicate samples prepared from a non-project sample was evaluated and considered, but data were not qualified based on this result since matrix similarity to project samples could not be guaranteed.

VALIDATION CRITERIA CHECKLIST

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)?

N/A

Comments: Target analytes were not reported by more than one method.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results?

No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results. The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
|------------------|----------------|----------------------------|--------------------------------|
| MKTF-18R | Arsenic | 0.0072 | 0.0073 |
| MKTF-46 | Beryllium | ND | 0.00097 |
| MKTF-38 | Nickel | ND | 0.0040 |
| MKTF-40 | Nickel | 0.0059 | 0.0088 |
| MKTF-46 | Silver | ND | 0.0039 |
| MKTF-18R | Silver | ND | 0.0015 |
| MKTF-38 | Silver | ND | 0.0040 |
| MKTF-40 | Silver | ND | 0.0066 |
| NKTF-31 | Silver | ND | 0.0020 |
| DUP-9-13-22 | Silver | ND | 0.0036 |
| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
| MKTF-46 | Vanadium | 0.0043 | 0.0056 |
| DUP-9-13-22 | Vanadium | 0.0038 | 0.0050 |
| EB-09-13-22 | Zinc | ND | 0.0064 |
| MKTF-46 | Zinc | 0.0072 | 0.0099 |
| MKTF-38 | Zinc | 0.013 | 0.015 |
| MKTF-31 | Zinc | 0.0071 | 0.010 |
| DUP-9-13-22 | Zinc | ND | 0.013 |

FIELD DUPLICATE SUMMARY

| Client Sample ID: MKTF-46
Field Duplicate Sample ID: DUP-9-13-22 | | | | |
|--|----------------|-------------------|--------------------|-----------------------------------|
| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
| Barium, Dissolved | E 200.7 | 0.037 mg/L | 0.036 mg/L | 2.70% |
| Barium, Total | E 200.7 | 0.068 mg/L | 0.075 mg/L | 9.80% |
| Beryllium, Dissolved | E 200.7 | 0.00097 mg/L | ND (0.0020 mg/L) | DL |
| Cobalt, Total | E 200.7 | 0.013 mg/L | 0.0086 mg/L | 40.7% |
| Silver, Dissolved | E 200.7 | 0.0039 mg/L | 0.0036 mg/L | 8.0% +/-RL |
| Vanadium, Dissolved | E 200.7 | 0.0056 mg/L | 0.0050 mg/L | 11.3% +/-RL |

| Lead, Total | E200.8 | 0.00073 mg/L | 0.00083 mg/L | 12.8% +/-RL |
| Selenium, Total | E200.8 | 0.00040 mg/L | 0.00063 mg/L | 44.7% +/-RL |
| Mercury, Total | E245.1 | 0.00010 mg/L | 0.00011 mg/L | 9.5% +/-RL |
| Cyanide, Total | E335.4 | ND (5.0 µg/L) | 3.06 µg/L | DL |
| TPH DRO | SW8015 | 0.068 mg/L | 0.058 mg/L | 15.9% +/-RL |
| TPH GRO | SW8015 | 0.025 mg/L | 0.021 mg/L | 17.4% +/-RL |
| Acetone | SW8260B | 6.4 µg/L | 8.1 µg/L | 23.4% +/-RL |
| Chlorobenzene | SW8260B | 0.29 µg/L | 0.33 µg/L | 12.9% +/-RL |
| sec-Butylbenzene | SW8260B | 0.18 µg/L | ND (1.0 µg/L) | DL |
| Di-n-butylphthalate | SW8270C | 15 µg/L | ND (10 µg/L) | DL |
| Pyrene | SW8270C | 0.40 µg/L | ND (1.0 µg/L) | DL |
| 1,4-Dioxane | SW8270C | 0.98 µg/L | 2.1 µg/L | 72.7% |
| <p>Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.</p> <p>DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).</p> <p>+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.</p> <p>The RPD values for 1,4-dioxane and total cobalt exceeded the data validation limit of 30% at 72.7% and 40.7%, respectively, which was evidence of poor precision. The 1,4-dioxane and total cobalt results were qualified as J for samples MKTF-46 and DUP 9-13-22.</p> | | | | |

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| EBD | Equipment blank detection |
| EBL | Flagged as estimated by the laboratory. |
| ECAL | The result exceeds the calibration range. |
| ERPD-FD | High field duplicate RPD. |
| ERPD-LCS | The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision. |
| FBD | Field blank detection |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| HR-SUR | The surrogate percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-LCS | The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| MBD | Method blank detection |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-09-14-22 | 2209730-001 |
| MKTF-27 | 2209730-002 |
| MKTF-28 | 2209730-003 |
| MKTF-29 | 2209730-004 |
| MKTF-30 | 2209730-005 |
| OPIS-1 | 2209730-006 |
| NAPI-2 | 2209730-007 |
| NAPI-3 | 2209730-008 |
| KA-3 | 2209730-009 |
| DUP 9-14-22 | 2209730-010 |
| FB 9-14-22 | 2209730-011 |
| Trip Blank | 2209730-012 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| J- | The result is an estimated concentration, but may be biased low |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 810 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformances related to this data set.

Method 8270C and Method 8270C SIM: Naphthalene and 1-methylnaphthalene were reported by EPA Method 8270 instead of EPA Method 8270 SIM because of their elevated concentrations for sample NAPI-2.

Method 8015D DRO: The LCS had slightly elevated recoveries.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No

If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

D – Sample diluted due to matrix.

E – The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL). *This laboratory flag was applied only to QC sample results in the laboratory report, and qualification of sample data was not required.*

J – Analyte detected below quantitation limits.

S – % Recovery outside of range due to dilution or matrix interference.

V – The sample concentration is too high to evaluate accurate spike recoveries.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present because the samples were transferred to a laboratory field courier service for transport from the field to the laboratory, and custody was maintained at all times.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| Method | Sample(s) | Analyte(s) | Dilution Factor |
|-----------|-----------|----------------------------|-----------------|
| 8260B | NAPI-2 | Select VOCs | 2 |
| 200.7 | NAPI-2 | Dissolved Barium | 5 |
| 200.7 | NAPI-3 | Total and Dissolved Barium | 5 |
| 8015D | OPIS-1 | TPH GRO, DRO, and MRO | 5 |
| 8260B | OPIS-1 | VOCs | 5 |
| 200.7 | NAPI-2 | Total Barium | 10 |
| 8015D | NAPI-2 | TPH GRO | 10 |
| 8270C | OPIS-1 | SVOCs | 10 |
| 8270C SIM | OPIS-1 | SVOCs | 10 |
| 8260B | NAPI-2 | Benzene | 20 |

| VALIDATION CRITERIA CHECKLIST | |
|--|-----|
| 5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? | No |
| <p>Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.</p> <p>The CoC requested total and dissolved metals using only Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> <p>The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> | |
| 6. Were samples received in good condition within method-specified requirements? | No |
| <p>Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ between 0.4°C and 2.4°C as noted on the CoC and Sample Log-in Check List. Samples transferred to Pace National were received in good condition with the cooler temperature outside the recommended range at 1.8°C as noted on the CoC.</p> <p>The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen.</p> | |
| 7. Were samples extracted/digested and analyzed within method-specified or technical holding times? | Yes |
| Comments: The samples were extracted/digested and analyzed within method-specific holding times. | |
| 8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. | Yes |
| Comments: The results were reported in concentration units of micrograms per liter ($\mu\text{g/L}$) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested. | |
| 9. Did the laboratory provide any specific initial and/or continuing calibration results? | No |
| Comments: Initial and continuing calibration data were not included as part of this data set. | |
| 10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? | N/A |
| Comments: Initial and continuing calibration data were not included as part of this data set. | |
| 11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | Yes |
| Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples. | |
| 12. Were target analytes reported as not detected in the laboratory blanks? | No |
| <p>Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exception.</p> <p>TPH DRO was detected in the laboratory blank for Method 8015D batch 70201 at a concentration of 0.025 mg/L. Results greater than the blank detection and/or the laboratory reporting limit but less than 10 times the blank concentration were qualified with a JB flag. Detections of this analyte in the associated samples with results greater than ten times the blank concentration did not require qualification.</p> | |

VALIDATION CRITERIA CHECKLIST

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>MS Sample Source</u> |
|---------------|-----------------------------|--------------|-------------------------|
| 200.7 | Total Metals | 70240 | Not Prepared |
| 200.7 | Dissolved Silver | A91392 | DUP 9-14-22 |
| 200.7 | Dissolved Metals | B91347 | Not Prepared |
| 200.7 | Dissolved Metals | C91347 | Not Prepared |
| 200.8 | Total Metals | 70240 | KA-3, DUP 9-14-22 |
| 200.8 | Dissolved Metals | C91078 | KA-3, DUP 9-14-22 |
| 245.1 | Total and Dissolved Mercury | 70279 | EB-09-14-22 |
| 504.1 | EDB | 70247 | Not Prepared |
| 4500CN E | Cyanide | WG1928522 | Not Associated |
| 4500CN E | Cyanide | WG1928523 | Not Associated, MKTF-27 |
| 8015D | TPH DRO and MRO | 70201 | Not Prepared |
| 8015D | TPH GRO | A91113 | Not Prepared |
| 8260B | VOCs | R91115 | Not Prepared |
| 8270C SIM | SVOCs | 70216 | Not Prepared |
| 8270C | SVOCs | 70216 | Not Prepared |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The MS/MSD percent recoveries and RPDs for project samples were within data validation and laboratory QC limits.

The percent recoveries and RPD values for MS/MSDs prepared from non-project samples were evaluated and considered, but data were not qualified based on those results since matrix similarity to project samples could not be guaranteed.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

VALIDATION CRITERIA CHECKLIST

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits |
|--------|--------------------|--------|--------------|---------------|--------------------|
| 200.7 | Dissolved Barium | B91347 | 68.2% | ----- | 70-130% |
| 200.7 | Dissolved Nickel | B91347 | 133% | ----- | 70-130% |
| 200.8 | Dissolved Selenium | C91078 | 62.2% | ----- | 70-130% |
| 8015D | TPH DRO | 70201 | 75.5% | Acceptable | 31.7-75.4% |

Detections of dissolved barium and dissolved selenium were qualified as J-, and non-detections of these analytes were qualified as UJ, due to the evidence of potential low bias.

Detections of dissolved nickel and TPH DRO were qualified as J+ due to the evidence of potential high bias. The non-detection of dissolved nickel in sample EB-09-14-22 did not require qualification due to this non-conformance.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

The recoveries of the surrogate BFB for samples NAPI-2, NAPI-3, and KA-3 were outside the laboratory acceptance range of 70-130% at 131%, 201%, and 147%, respectively. TPH GRO was detected in the Method 8015D analysis of samples NAPI-2, NAPI-3, KA-3, and these results were qualified as J+ to indicate a potential high bias.

Since Method 8270C and 8270C SIM surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the Method 8270C SIM analysis of samples MKTF-27, MKTF-28, MKTF-29, MKTF-30, NAPI-2, NAPI-3, KA-3, and DUP 9-14-22, and qualification of sample data was not required.

The SVOC results for sample OPIS-1 were not qualified based on the surrogate non-conformances in the Method 8270C and Method 8270C SIM analyses since the applied dilution of 10 times resulted in surrogate concentrations below routinely calibrated levels, and those results were deemed unreliable and possibly inaccurate.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB 9-14-22, and one equipment blank sample, EB-9-14-22, were collected as part of this sample set.

VALIDATION CRITERIA CHECKLIST

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration</u> |
|------------------------|---------------|-----------------------|----------------------|
| FB 9-14-22 | 8260B | 2-Butanone | 12 µg/L |
| FB 9-14-22 | 8260B | Acetone | 59 µg/L |
| EB-9-14-22 | 200.7 | Dissolved Zinc | 0.0069 mg/L |
| EB-9-14-22 | 200.7 | Total Zinc | 0.0052 mg/L |
| EB-9-14-22 | 8015D | TPH DRO | 0.71 mg/L |
| EB-9-14-22 | 8015D | TPH MRO | 0.89 mg/L |

Detections of dissolved zinc, total zinc, and TPH MRO in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of dissolved zinc, total zinc, and TPH MRO in the associated samples that were greater than the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of these analytes in the associated samples did not require qualification.

The TPH DRO results for the samples in batch 70201 were previously qualified due to a laboratory blank detection; therefore, additional qualification due to the equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples.

Sample DUP 9-14-22 was collected as a field duplicate of sample MKTF-27.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exception.

The RPD value for total cobalt exceeded the data validation limit of 30% at 30.8%, which was evidence of poor precision. The total cobalt results were qualified as J for samples MKTF-27 and DUP 9-14-22.

22. For laboratory duplicates prepared from project samples, were RPDs within data validation or laboratory QC limits? N/A

Comments: Laboratory duplicates were prepared for the analysis of cyanide in batches WG1928522 and WG1928523 from samples not associated with this data set.

The RPD values for the laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

VALIDATION CRITERIA CHECKLIST

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)?

N/A

Comments: Target analytes were not reported by more than one method.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results?

No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
|------------------|----------------|----------------------------|--------------------------------|
| MKTF-28 | Antimony | ND | 0.00077 |
| MKTF-27 | Nickel | 0.029 | 0.032 |
| MKTF-28 | Nickel | ND | 0.0050 |
| MKTF-29 | Nickel | 0.015 | 0.018 |
| MKTF-30 | Nickel | 0.014 | 0.018 |
| KA-3 | Nickel | 0.020 | 0.022 |
| DUP 9-14-22 | Nickel | 0.029 | 0.033 |
| KA-3 | Selenium | 0.00080 | 0.0014 |
| MKTF-27 | Silver | ND | 0.0043 |
| MKTF-28 | Silver | ND | 0.0019 |
| MKTF-29 | Silver | 0.0026 | 0.0077 |
| MKTF-30 | Silver | ND | 0.0022 |
| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
| OPIS-1 | Silver | ND | 0.0025 |
| NAPI-2 | Silver | ND | 0.0026 |
| NAPI-3 | Silver | ND | 0.0028 |
| DUP 9-14-22 | Silver | ND | 0.0040 |
| EB-09-14-22 | Zinc | 0.0052 | 0.0069 |
| MKTF-27 | Zinc | 0.0040 | 0.011 |
| MKTF-28 | Zinc | 0.024 | 0.043 |
| MKTF-29 | Zinc | ND | 0.011 |
| MKTF-30 | Zinc | ND | 0.0090 |
| OPIS-1 | Zinc | 0.0068 | 0.023 |
| NAPI-2 | Zinc | ND | 0.0096 |
| NAPI-3 | Zinc | ND | 0.012 |
| KA-3 | Zinc | 0.0089 | 0.032 |
| DUP 9-14-22 | Zinc | ND | 0.010 |

The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

FIELD DUPLICATE SUMMARY

| Client Sample ID: MKTF-27
Field Duplicate Sample ID: DUP 9-14-22 | | | | |
|---|----------------|-------------------|-------------------|-----------------------------------|
| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
| Barium, Dissolved | E 200.7 | 0.059 mg/L | 0.058 mg/L | 1.7% |
| Barium, Total | E 200.7 | 0.18 mg/L | 0.17 mg/L | 5.7% |
| Cobalt, Total | E 200.7 | 0.011 mg/L | 0.015 mg/L | 30.8% |
| Nickel, Dissolved | E 200.7 | 0.032 mg/L | 0.033 mg/L | 3.1% |
| Nickel, Total | E 200.7 | 0.029 mg/L | 0.029 mg/L | 0.0% |
| Silver, Dissolved | E 200.7 | 0.0043 mg/L | 0.0040 mg/L | 7.2% +/-RL |
| Vanadium, Dissolved | E 200.7 | 0.0038 mg/L | 0.0048 mg/L | 23.3% +/-RL |
| Vanadium, Total | E 200.7 | 0.015 mg/L | 0.016 mg/L | 6.5% +/-RL |
| Zinc, Dissolved | E 200.7 | 0.011 mg/L | 0.010 mg/L | 9.5% +/-RL |
| Zinc, Total | E 200.7 | 0.0040 mg/L | ND (0.010 mg/L) | DL |
| Arsenic, Dissolved | E200.8 | 0.00042 mg/L | 0.00049 mg/L | 15.4% +/-RL |
| Arsenic, Total | E200.8 | 0.0011 mg/L | 0.0013 mg/L | 16.7% +/-RL |
| Lead, Dissolved | E200.8 | 0.000093 mg/L | 0.000080 mg/L | 15.0% +/-RL |
| Lead, Total | E200.8 | 0.0032 mg/L | 0.0029 mg/L | 9.8% |
| Selenium, Dissolved | E200.8 | 0.00051 mg/L | 0.00094 mg/L | 59.3% +/-RL |
| Selenium, Total | E200.8 | 0.0011 mg/L | 0.0014 mg/L | 24.0% +/-RL |
| Cyanide, Total | E335.4 | 0.00799 mg/L | 0.00901 mg/L | 12.0% +/-RL |
| TPH DRO | SW8015 | 0.20 mg/L | 0.21 mg/L | 4.9% |
| TPH GRO | SW8015 | 0.030 mg/L | 0.032 mg/L | 6.5% +/-RL |
| TPH ORO | SW8015 | 0.068 mg/L | 0.061 mg/L | 10.9% +/-RL |
| 1,1-Dichloroethane | SW8260B | 1.6 µg/L | 1.6 µg/L | 0.0% +/-RL |
| MTBE | SW8260B | 33 µg/L | 33 µg/L | 0.0% |
| 1,4-Dioxane | SW8270C | 5.0 µg/L | 5.7 µg/L | 13.1% |
| <p>Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.</p> <p>DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).</p> <p>+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.</p> <p>The RPD value for total cobalt exceeded the data validation limit of 30% at 30.8%, which was evidence of poor precision. The total cobalt results were qualified as J for samples MKTF-27 and DUP 9-14-22.</p> | | | | |

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| EBD | Equipment blank detection |
| ERPD-FD | High field duplicate RPD. |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| HR-SUR | The surrogate percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-LCS | The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| MBD | Method blank detection |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |

| Analyte | Method | Field Sample ID | Lab Sample ID | Result | Limit | Units | Reviewer Qualifier | DV Flag Reasons |
|---------------------|---------|-----------------|---------------|---------|--------|-------|--------------------|-----------------|

Tier II Data Validation Report Summary

| | |
|---|--|
| Client: Marathon Oil | Laboratory: Hall Environmental Analysis Laboratory |
| Project Name: Western Refining Southwest, Quarterly GW | Sample Matrix: Groundwater |
| Project Number: 697-080-002 Task: 0004 | Sample Start Date: 09/15/2022 |
| Date Validated: 01/16/2023 | Sample End Date: 09/15/2022 |
| Parameters Included: <ul style="list-style-type: none"> ▪ Volatile Organic Compounds (VOC) by Environmental Protection Agency (EPA) Test Methods for Evaluating Solid Waste (SW-846) Method 8260B ▪ 1,2-Dibromoethane (EDB) by EPA Method 504.1 ▪ Semivolatile Organic Compounds (SVOC) by SW-846 Method 8270C and Method 8270C with Selected Ion Monitoring (SIM) ▪ Total Petroleum Hydrocarbons (TPH) Gasoline Range Organics (GRO) by SW-846 Method 8015D ▪ TPH Diesel Range Organics (DRO) and Motor Oil Range Organics (MRO) by SW-846 Method 8015D Modified ▪ Total and Dissolved Metals by EPA Method 200.7 and Method 200.8 ▪ Total and Dissolved Mercury by EPA Method 245.1 ▪ Anions by EPA Method 300.0 ▪ Cyanide by Standard Methods for the Examination of Water and Wastewater (SM) Method 4500 CN E | |
| Laboratory Project ID: 2209816 | |
| Data Validator: Daran O'Hollearn, Lead Project Scientist | |
| Reviewer: Charles Ballek, Senior Chemist | |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-09-15-22 | 2209816-001 |
| MKTF-16 | 2209816-002 |
| OW-12A | 2209816-003 |
| OW-70 | 2209816-004 |
| OW-57 | 2209816-005 |
| FB 9-15-22 | 2209816-006 |
| DUP 9-15-22 | 2209816-007 |
| Trip Blank | 2209816-008 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ⊗ MS/MSD (Items 13 and 14)
- ✓ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 456 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformance related to this data set.

Method 8270C: Naphthalene, 1-methylnaphthalene, and 2-methylnaphthalene were reported by EPA Method 8270 instead of EPA Method 8270 SIM because of their elevated concentrations for sample OW-57.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No

If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

D – Sample diluted due to matrix.

J – Analyte detected below quantitation limits.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? No

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. The laboratory noted that the shipping containers were sealed, and custody seals were present and intact on the shipping containers.

The container for sample MKTF-16 Method 8015 DRO/MRO was not received by the laboratory.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| Method | Sample(s) | Analyte(s) | Dilution Factor |
|--------|------------------------|-----------------------------------|-----------------|
| 8015D | OW-57 | TPH DRO and MRO | 2 |
| 200.7 | MKTF-16, OW-12A, OW-57 | Select Total and Dissolved Metals | 5 |
| 200.8 | MKTF-16 | Total Lead | 5 |
| 300.0 | MKTF-16 | Anions | 5 |
| 8015D | MKTF-16, OW-12A | TPH GRO | 5 |
| 8260B | MKTF-16 | VOCs | 5 |
| 200.7 | MKTF-16 | Total Barium | 10 |
| 200.8 | OW-57 | Total Lead and Selenium | 20 |
| 200.7 | OW-57 | Total Barium | 50 |
| 8015D | OW-57 | TPH GRO | 50 |
| 8260B | OW-12A, OW-57 | Select VOCs | 50 |
| 200.7 | MKTF-16 | Total Iron | 100 |
| 8260B | OW-57 | Benzene | 500 |

| VALIDATION CRITERIA CHECKLIST | |
|--|-----|
| 5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? | No |
| <p>Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.</p> <p>The CoC requested total and dissolved metals using only Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> <p>The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> | |
| 6. Were samples received in good condition within method-specified requirements? | No |
| <p>Comments: Samples were received on ice, in good condition, and with the cooler temperatures outside the recommended temperature range of 4°C ± 2°C at 0.4°C, 1.3°C, and 1.4°C as noted on the <i>Sample Log-in Check List</i>. Samples transferred to Pace National were received in good condition with the cooler temperature within the recommended range at 5.7°C as noted on the CoC.</p> <p>The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen.</p> | |
| 7. Were samples extracted/digested and analyzed within method-specified or technical holding times? | Yes |
| Comments: The samples were extracted/digested and analyzed within method-specific holding times. | |
| 8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. | Yes |
| Comments: The results were reported in concentration units of micrograms per liter (µg/L) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested. | |
| 9. Did the laboratory provide any specific initial and/or continuing calibration results? | No |
| Comments: Initial and continuing calibration data were not included as part of this data set. | |
| 10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? | N/A |
| Comments: Initial and continuing calibration data were not included as part of this data set. | |
| 11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | Yes |
| Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples. | |
| 12. Were target analytes reported as not detected in the laboratory blanks? | No |
| <p>Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exception.</p> <p>TPH DRO was detected in the laboratory blank for Method 8015D batch 70323 at a concentration of 0.021 mg/L. The sample EB-09-15-22 TPH DRO result that was detected at a concentration equal to the blank concentration and less than the laboratory reporting limit was qualified with a U flag. The TPH DRO results in the remaining associated samples were greater than ten times the blank concentration and did not require qualification.</p> | |

VALIDATION CRITERIA CHECKLIST

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>MS Sample Source</u> |
|---------------|-----------------------------|--------------|-------------------------|
| 200.7 | Total Metals | 70299 | MKTF-16, OW-12A |
| 200.7 | Total Metals | 70359 | Not Prepared |
| 200.7 | Dissolved Silver | A91392 | EB-09-15-22 |
| 200.7 | Dissolved Metals | C91347 | Not Prepared |
| 200.8 | Total Metals | 70299 | Not Prepared |
| 200.8 | Total Metals | 70359 | Not Prepared |
| 200.8 | Dissolved Metals | A91132 | Not Prepared |
| 245.1 | Total and Dissolved Mercury | 70307 | Not Prepared |
| 245.1 | Total Mercury | 70391 | Not Prepared |
| 300.0 | Anions | R91119 | Not Prepared |
| 504.1 | EDB | 70321 | Not Prepared |
| 4500CN E | Cyanide | WG1929558 | Not Associated |
| 8015D | TPH DRO and MRO | 70323 | Not Prepared |
| 8015D | TPH GRO | B91113 | Not Prepared |
| 8015D | TPH GRO | C91131 | Not Prepared |
| 8260B | VOCs | A91114 | Not Prepared |
| 8260B | VOCs | R91137 | Not Prepared |
| 8270C SIM | SVOCs | 70290 | Not Prepared |
| 8270C | SVOCs | 70290 | Not Prepared |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The percent recoveries and RPDs for MS/MSDs prepared from project samples were within data validation and laboratory QC limits.

The percent recoveries and RPD values for MS/MSDs prepared from non-project samples were evaluated and considered, but data were not qualified based on those results since matrix similarity to project samples could not be guaranteed.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

VALIDATION CRITERIA CHECKLIST

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exception.

The LCS recovery for total cobalt in Method 200.7 batch 70299 was outside the acceptance limits of 70-130% at 141%. Total cobalt was detected in associated samples and the results were qualified with J+ flags due to potential high bias. Total cobalt was not detected in the associated sample EB-09-15-22 and the result did not require qualification.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

| Method | Surrogate | Sample | Surrogate Recovery | QC Limits |
|-------------|-----------------------------|-------------|--------------------|-----------|
| 8015D (GRO) | Bromofluorobenzene (BFB) | OW-12A | 158% | 70-130% |
| 8015D (GRO) | BFB | OW-70 | 517% | 70-130% |
| 8015D (GRO) | BFB | DUP 9-15-22 | 493% | 70-130% |
| 8270C-SIM | 4-Terphenyl-d ₁₄ | EB-09-15-22 | 70.0% | 72.2-147% |
| 8270C-SIM | 4-Terphenyl-d ₁₄ | MKTF-16 | 53.5% | 72.2-147% |
| 8270C-SIM | 4-Terphenyl-d ₁₄ | OW-12A | 53.9% | 72.2-147% |
| 8270C-SIM | 4-Terphenyl-d ₁₄ | OW-70 | 54.7% | 72.2-147% |
| 8270C-SIM | 4-Terphenyl-d ₁₄ | OW-57 | 51.1% | 72.2-147% |
| 8270C-SIM | 4-Terphenyl-d ₁₄ | DUP 9-15-22 | 48.5% | 72.2-147% |

The associated analyte TPH GRO was detected in the identified samples. These results were qualified as J+ due to evidence of potential high bias.

Since Method 8270C and 8270C-SIM surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the Method 8270C-SIM analysis for samples EB-09-15-22, MKTF-16, OW-12A, OW-70, OW-57, and DUP 9-15-22 and qualification of sample data was not required.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB 9-15-22, and one equipment blank sample, EB-09-15-22, were collected as part of this sample set.

VALIDATION CRITERIA CHECKLIST

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration</u> |
|------------------------|---------------|-----------------------|----------------------|
| Trip Blank | 8260B | Acetone | 2.7 µg/L |
| FB 9-15-22 | 8260B | 2-Butanone | 17 µg/L |
| FB 9-15-22 | 8260B | Acetone | 11 µg/L |
| EB-09-15-22 | 8260B | Acetone | 4.3 µg/L |
| EB-09-15-22 | 8015D | TPH DRO | 0.021 mg/L |
| EB-09-15-22 | 200.7 | Dissolved Zinc | 0.0066 mg/L |

Detections of acetone in the sample EB-09-15-22 and dissolved zinc in sample OW-57 that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. The detections of acetone and dissolved zinc in the associated samples that were greater than the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples did not require qualification.

The TPH DRO results for the samples in batch 70323 were previously qualified due to a laboratory blank detection; therefore, additional qualification due to the equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples.

Sample DUP-9-15-22 was collected as a field duplicate of sample OW-70.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exceptions.

The RPD value for total lead exceeded the data validation limit of 30% at 35.9%. The MTBE results for samples OW-70 and DUP-9-15-22 were assigned J qualifiers due to evidence of poor precision.

An RPD value could not be calculated for 1-methylnaphthalene, 2-methylnaphthalene, and naphthalene for the field duplicate pair OW-70 and DUP-9-15-22 since the analyte was detected in the parent sample and was undetected in the duplicate sample. As the detections in the parent sample were greater than two times the reporting limit, 1-methylnaphthalene, 2-methylnaphthalene, and naphthalene were qualified as J and UJ for the parent and duplicate samples, respectively.

VALIDATION CRITERIA CHECKLIST

22. For laboratory duplicates prepared from project samples, were RPDs within data validation or laboratory QC limits? N/A

Comments: Laboratory duplicates were prepared for the analysis of cyanide in batch WG1929558 from sample EB-09-15-22 and from a sample not associated with this data set.

The sample EB-09-15-22 and the laboratory duplicate were both non-detect for cyanide and a RPD could not be calculated.

The RPD values for the laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? N/A

Comments: Target analytes were not reported by more than one method in this data set.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
|------------------|----------------|----------------------------|--------------------------------|
| MKTF-16 | Antimony | 0.00049 | 0.00060 |
| OW-70 | Cadmium | ND | 0.0010 |
| OW-12A | Silver | ND | 0.0020 |
| OW-57 | Silver | ND | 0.0019 |
| EB-09-15-22 | Zinc | ND | 0.0066 |
| OW-12A | Zinc | 0.0083 | 0.013 |
| OW-70 | Zinc | 0.0047 | 0.011 |
| DUP 9-15-22 | Zinc | ND | 0.013 |

The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

FIELD DUPLICATE SUMMARY

| Client Sample ID: OW-70
Field Duplicate Sample ID: DUP 9-15-22 | | | | |
|---|----------------|--------------------|-----------------------|-----------------------------------|
| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
| Barium, Dissolved | E 200.7 | 0.53 mg/L | 0.55 mg/L | 3.7% |
| Barium, Total | E 200.7 | 0.79 mg/L | 0.70 mg/L | 12.1% |
| Cadmium, Dissolved | E 200.7 | 0.0010 mg/L | ND (0.0020 mg/L) | DL |
| Chromium, Total | E 200.7 | 0.0070 mg/L | 0.0031 mg/L | 77.2% +/-RL |
| Cobalt, Dissolved | E 200.7 | 0.0042 mg/L | 0.0046 mg/L | 9.1% +/-RL |
| Cobalt, Total | E 200.7 | 0.0094 mg/L | 0.012 mg/L | 24.3% +/-RL |
| Nickel, Dissolved | E 200.7 | 0.044 mg/L | 0.043 mg/L | 2.3% |
| Nickel, Total | E 200.7 | 0.046 mg/L | 0.044 mg/L | 4.4% |
| Vanadium, Dissolved | E 200.7 | 0.0031 mg/L | 0.0025 mg/L | 21.4% +/-RL |
| Vanadium, Total | E 200.7 | 0.014 mg/L | 0.0083 mg/L | 51.1% +/-RL |
| Zinc, Dissolved | E 200.7 | 0.011 mg/L | 0.013 mg/L | 16.7% +/-RL |
| Zinc, Total | E 200.7 | 0.0047 mg/L | ND (0.010 mg/L) | DL |
| Arsenic, Dissolved | E200.8 | 0.0012 mg/L | 0.0012 mg/L | 0.0% +/-RL |
| Arsenic, Total | E200.8 | 0.0028 mg/L | 0.0025 mg/L | 11.3% |
| Lead, Dissolved | E200.8 | 0.00012 mg/L | 0.00013 mg/L | 8.0% +/-RL |
| Lead, Total | E200.8 | 0.0023 mg/L | 0.0016 mg/L | 35.9% |
| Selenium, Total | E200.8 | 0.00069 mg/L | ND (0.0010) mg/L | DL |
| TPH DRO | SW8015 | 0.94 mg/L | 0.96 mg/L | 2.1% |
| TPH GRO | SW8015 | 0.39 mg/L | 0.35 mg/L | 10.8% |
| 1,1-Dichloroethane | SW8260B | 0.49 µg/L | 0.47 µg/L | 4.2% +/-RL |
| 1,2,4-Trimethylbenzene | SW8260B | 0.13 µg/L | 0.15 µg/L | 14.3% +/-RL |
| 1,2-Dichloroethane | SW8260B | 6.8 µg/L | 5.9 µg/L | 14.2% |
| Benzene | SW8260B | 1.0 µg/L | 0.99 µg/L | 1.0% +/-RL |
| Isopropylbenzene | SW8260B | 30 µg/L | 28 µg/L | 6.9% |
| MTBE | SW8260B | 60 µg/L | 55 µg/L | 8.7% |
| n-Butylbenzene | SW8260B | 1.5 µg/L | 1.4 µg/L | 6.9% +/-RL |

| Fluoranthene | SW8270C | ND (0.30 µg/L) | 0.20 µg/L | DL |

| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
|--------------|---------|-------------------|------------------|-----------------------------------|
| Naphthalene | SW8270C | 1.3 µg/L | ND (0.30 µg/L) | DL |
| Phenanthrene | SW8270C | 0.40 µg/L | 0.34 µg/L | 16.2% +/-RL |
| Phenol | SW8270C | 29 µg/L | ND (20 µg/L) | DL |
| Pyrene | SW8270C | ND (1.0 µg/L) | 0.44 µg/L | DL |

Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

The RPD value for total lead exceeded the data validation limit of 30% at 35.9%, which was evidence of poor precision. The MTBE results were qualified as J for samples OW-70 and DUP 9-15-22.

An RPD value could not be calculated for 1-methylnaphthalene, 2-methylnaphthalene, and naphthalene for the field duplicate pair OW-70 and DUP 9-15-22 since the analyte was detected in the parent sample and was undetected in the duplicate sample. As the detections in the parent sample were greater than two times the reporting limit, 1-methylnaphthalene, 2-methylnaphthalene, and naphthalene were qualified as J and UJ for the parent and duplicate samples, respectively.

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| MBD | Method blank detection |
| HR-MS | The MS and/or MSD percent recovery was greater than the upper acceptable limit indicating possible matrix interference. |
| HR-SUR | The surrogate percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| EBD | Equipment blank detection |
| TBD | Trip blank detection |
| ERPD-FD | High field duplicate RPD. |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |

| Reviewer: Charles Ballek, Senior Chemist | |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-12-15-22 | 2212a11-001 |
| MKTF-30 | 2212a11-002 |
| STP-1-NW | 2212a11-003 |
| OPIS-1 | 2212a11-004 |
| FB-12-15-22 | 2212a11-005 |
| Dup-12-15-22 | 2212a11-006 |
| Trip Blank | 2212a11-007 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ⊗ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ✓ Trip, Field, and Equipment Blanks (Items 18 and 19)
- ✓ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| J- | The result is an estimated concentration, but may be biased low |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 360 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformances related to this data set.

Method 80156D DRO/MRO: The method blank had a low-level detection for DRO. Samples with detections are flagged with a "B".

2. Were the data free of data qualification flags and/or notes used by the laboratory? No

If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

B – Analyte detected in the associated method blank.

D – Sample diluted due to matrix.

J – Analyte detected below quantitation limits.

P1 – RPD value not applicable for sample concentrations less than 5 times the reporting limit.

R – % PRD is out of range.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? No

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. The laboratory noted that the shipping containers were sealed, and custody seals were present and intact on the shipping containers.

The trip blank sample was received by the laboratory but was not included on the CoC. The laboratory logged in the sample and performed the appropriate volatile analyses. Validation action was not required.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| <u>Method</u> | <u>Sample(s)</u> | <u>Analyte(s)</u> | <u>Dilution Factor</u> |
|---------------|------------------|----------------------------|------------------------|
| 200.8 | Multiple Samples | Total and Dissolved Metals | 5 |
| 8015D | OPIS-1 | TPH DRO and MRO | 5 |
| 8015D | OPIS-1 | VOCs | 5 |
| 8270C | OPIS-1 | SVOCs | 10 |
| 8270C SIM | OPIS-1 | SVOCs | 10 |

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? No

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.

The CoC requested total and dissolved metals using only Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

VALIDATION CRITERIA CHECKLIST

6. Were samples received in good condition within method-specified requirements?

No

Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ at 0.4°C , 0.6°C , and 3.1°C as noted on Sample Log-in Check List. Samples transferred to Pace National were received in good condition with the cooler temperature within the recommended range at 4.0°C as noted on the CoC.

The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen.

7. Were samples extracted/digested and analyzed within method-specified or technical holding times?

Yes

Comments: The samples were extracted/digested and analyzed within method-specific holding times.

8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil.

Yes

Comments: The results were reported in concentration units of micrograms per liter ($\mu\text{g/L}$) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.

9. Did the laboratory provide any specific initial and/or continuing calibration results?

No

Comments: Initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits?

N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method?

Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

12. Were target analytes reported as not detected in the laboratory blanks?

No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

| Method | Analyte | Batch | Concentration |
|--------|-----------------|-------|---------------|
| 200.7 | Total Beryllium | 72221 | 0.00082 mg/L |
| 8015D | TPH DRO | 72199 | 0.097 mg/L |

Detections of total beryllium and TPH DRO in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of TPH DRO in the associated samples that were greater than the reporting limits but less than or equal to 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

VALIDATION CRITERIA CHECKLIST

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>MS Sample Source</u> |
|---------------|-----------------------------|--------------|-------------------------|
| 200.7 | Total Metals | 72221 | Not Prepared |
| 200.7 | Dissolved Metals | C93558 | EB-12-15-22, MKTF-30 |
| 200.8 | Total Metals | 72221 | Not Prepared |
| 200.8 | Dissolved Metals | A93438 | EB-12-15-22, MKTF-30 |
| 200.8 | Dissolved Antimony | A93556 | MKTF-30, STP-1-NW |
| 245.1 | Total and Dissolved Mercury | 72295 | Not Prepared |
| 504.1 | EDB | 72313 | Not Prepared |
| 4500CN E | Cyanide | WG1977924 | Not Associated |
| 8015D | TPH DRO and MRO | 72199 | Not Prepared |
| 8015D | TPH GRO | B93549 | MKTF-30 |
| 8260B | VOCs | R93599 | MKTF-30 |
| 8270C SIM | SVOCs | 72138 | Not Prepared |
| 8270C | SVOCs | 72138 | Not Prepared |
| 8270C SIM | SVOCs | 72239 | Not Prepared |
| 8270C | SVOCs | 72239 | Not Prepared |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? No

Comments: The MS/MSD percent recoveries and RPDs for project samples were within data validation and laboratory QC limits, with the following exceptions.

| <u>Method</u> | <u>Analyte</u> | <u>Batch</u> | <u>MS Recovery</u> | <u>MSD Recovery</u> | <u>MS/MSD QC Limits</u> |
|---------------|---------------------|--------------|--------------------|---------------------|-------------------------|
| 200.7 | Dissolved Barium | C93558 | 65.3% | 62.2% | 75-125% |
| 200.7 | Dissolved Beryllium | C93558 | Acceptable | 73.0% | 75-125% |
| 200.7 | Dissolved Cadmium | C93558 | 70.1% | 66.7% | 75-125% |
| 200.7 | Dissolved Chromium | C93558 | 64.4% | 60.9% | 75-125% |
| 200.7 | Dissolved Cobalt | C93558 | 64.0% | 60.9% | 75-125% |
| 200.7 | Dissolved Nickel | C93558 | 64.0% | 61.2% | 75-125% |
| 200.7 | Dissolved Silver | C93558 | 58.1% | 56.5% | 75-125% |
| 200.7 | Dissolved Vanadium | C93558 | 72.2% | 69.4% | 75-125% |
| 200.7 | Dissolved Zinc | C93558 | 64.9% | 61.5% | 75-125% |

Detections of the identified analytes in the associated samples were qualified as J- due to evidence of potential low bias. Non-detections of these analytes in the associated samples were qualified as UJ.

VALIDATION CRITERIA CHECKLIST

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits | LCS/LCSD RPD | RPD QC Limits |
|-----------|--------------------|--------|--------------|---------------|--------------------|--------------|---------------|
| 200.7 | Total Nickel | 72221 | 148% | ----- | 70-130% | ----- | ----- |
| 200.7 | Dissolved Nickel | C93558 | 137% | ----- | 70-130% | ----- | ----- |
| 200.7 | Dissolved Chromium | C93558 | 50.7% | ----- | 70-130% | ----- | ----- |
| 245.1 | Mercury | 72295 | 148% | ----- | 70-130% | ----- | ----- |
| 504.1 | EDB | 72313 | Acceptable | Acceptable | 70-130% | 40.2% | 20% |
| 8270C | Pyrene | 72239 | Acceptable | Acceptable | 61-123% | 16.6% | 11.8% |
| 8270C SIM | 1,4-Dioxane | 72239 | Acceptable | Acceptable | 15-60.5% | 32.3% | 29.7% |
| 8270C SIM | Anthracene | 72239 | Acceptable | Acceptable | 21.1-106% | 22.5% | 14.4% |
| 8270C SIM | Fluoranthene | 72239 | Acceptable | Acceptable | 32.8-119% | 24.9% | 14.8% |
| 8270C SIM | Pyrene | 72239 | Acceptable | Acceptable | 34.1-110% | 24.7% | 19.2% |

Dissolved chromium was not detected in the associated samples, and these results were qualified as UJ due to evidence of potential low bias.

Detections of total nickel, dissolved nickel, and mercury were assigned J+ qualifiers due to evidence of potential high bias. Non-detections of these analytes in the associated samples did not require qualification.

The analytes with LCS/LCSD RPD values that exceeded the QC limits were qualified as J for detections and UJ for non-detections for the associated samples due to evidence of poor precision.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

The Method 8015D surrogate BFB in sample OPIS-1 was recovered outside the acceptance limits of 70-130% at 164%. TPH GRO was detected in the Method 8015D analysis of sample OPIS-1, and this result was qualified as J+ due to evidence of potential high bias.

The SVOC results for sample OPIS-1 were not qualified based on the surrogate non-conformances in the Method 8270C analyses since the applied dilution of 10 times resulted in surrogate concentrations below routinely calibrated levels and those results were deemed unreliable and possibly inaccurate.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB-12-15-22, and one equipment blank sample, EB-12-15-22, were collected as part of this sample set.

VALIDATION CRITERIA CHECKLIST

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration (mg/L)</u> |
|------------------------|---------------|-------------------|-----------------------------|
| EB-12-15-22 | 245.1 | Total Mercury | 0.000099 |
| EB-12-15-22 | 245.1 | Dissolved Mercury | 0.000097 |
| EB-12-15-22 | 8015D | TPH DRO | 0.030 |

Total mercury and dissolved mercury were not detected in the associated samples and the results did not require qualification based on the equipment blank detections.

The TPH DRO results in Method 8015D batch 72199 were previously qualified due to a laboratory blank detection; therefore, additional qualification due to the equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples.

Sample Dup-12-15-22 was collected as a field duplicate of sample STP-1-NW.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? Yes

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples.

22. For laboratory duplicates prepared from project samples, were RPDs within data validation or laboratory QC limits? N/A

Comments: Laboratory duplicates were prepared for the analysis of cyanide in batch WG1977924 from a samples not associated with this data set.

The RPD value for the laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

VALIDATION CRITERIA CHECKLIST

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? Yes

Comments: Target analytes were not reported by more than one method.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
|------------------|----------------|----------------------------|--------------------------------|
| OPIS-1 | Antimony | ND | 0.0032 |
| STP-1-NW | Arsenic | 0.0018 | 0.0022 |
| DUP-12-15-22 | Arsenic | 0.0019 | 0.0023 |
| DUP-12-15-22 | Selenium | 0.0058 | 0.0070 |
| STP-1-NW | Vanadium | 0.028 | 0.039 |
| DUP-12-15-22 | Vanadium | 0.028 | 0.029 |
| OPIS-1 | Zinc | 0.0079 | 0.0097 |

The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

FIELD DUPLICATE SUMMARY

| Client Sample ID: STP-1-NW
Field Duplicate Sample ID: DUP-12-15-22 | | | | |
|--|---------|-------------------|------------------|-----------------------------------|
| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
| Barium, Dissolved | E 200.7 | 0.063 mg/L | 0.056 mg/L | 11.8% |
| Barium, Total | E 200.7 | 0.098 mg/L | 0.10 mg/L | 2.0% |
| Chromium, Total | E 200.7 | 0.0023 mg/L | 0.0022 mg/L | 4.4% +/-RL |
| Silver, Dissolved | E 200.7 | 0.0016 mg/L | 0.0013 mg/L | 20.7% +/-RL |
| Silver, Total | E 200.7 | 0.0022 mg/L | 0.0019 mg/L | 14.6% +/-RL |
| Vanadium, Dissolved | E 200.7 | 0.039 mg/L | 0.029 mg/L | 29.4% +/-RL |
| Vanadium, Total | E 200.7 | 0.028 mg/L | 0.028 mg/L | 0.0% +/-RL |
| Arsenic, Dissolved | E200.8 | 0.0022 mg/L | 0.0023 mg/L | 4.4% +/-RL |
| Arsenic, Total | E200.8 | 0.0018 mg/L | 0.0019 mg/L | 5.4% +/-RL |
| Selenium, Dissolved | E200.8 | 0.0073 mg/L | 0.0070 mg/L | 4.2% +/-RL |
| Selenium, Total | E200.8 | 0.0093 mg/L | 0.0058 mg/L | 46.4% +/-RL |
| Cyanide, Total | E335.4 | 0.0538 mg/L | 0.0503 mg/L | 6.7% |
| TPH DRO | SW8015 | 0.20 mg/L | 0.20 mg/L | 0.0% |
| TPH ORO | SW8015 | 0.074 mg/L | ND (0.080 mg/L) | DL |
| 1,4-Dioxane | SW8270C | 0.12 µg/L | 0.12 µg/L | 0.0% +/-RL |
| <p>Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.</p> <p>DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).</p> <p>+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.</p> | | | | |

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|--|
| ERPD-LCS | The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision. |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| HR-SUR | The surrogate percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-LCS | The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| LR-MS | The MS and/or MSD percent recovery was less than the lower acceptable limit indicating possible matrix interference. |
| MBD | Method blank detection |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |
| ERPD-LCS | The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision. |

| Analyte | Method | Field Sample ID | Lab Sample ID | Result | Limit | Units | Reviewer Qualifier | DV Flag Reasons |

| Reviewer: Mike Phillips, Senior Chemist | |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-12-22-22 | 2212d48-001 |
| OW-1 | 2212d48-002 |
| BW-4B | 2212d48-003 |
| BW-5C | 2212d48-004 |
| BW-5B | 2212d48-005 |
| MKTF-44 | 2212d48-006 |
| OW-10 | 2212d48-007 |
| MKTF-43 | 2212d48-008 |
| FB-12-22-22 | 2212d48-009 |
| DUP-12-22-22 | 2212d48-010 |
| Trip Blank | 2212d48-011 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Trip, Field, and Equipment Blanks (Items 18 and 19)
- ✓ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| JB | Estimated concentration due to blank contamination |
| U | Evaluated to be undetected at the reporting limit |
| R | Rejected, data not usable |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 720 data points. The data completeness calculation does not include any submitted blank sample results. Seven data points were rejected. The data completeness measure for this data package is calculated to be 99.03% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformances related to this data set.

Method 8270C and Method 8270C SIM: 1-Methylnaphthalene, 2-methylnaphthalene, and naphthalene were reported by EPA Method 8270 instead of EPA Method 8270 SIM because of their elevated concentrations for samples OW-1.

1-Methylnaphthalene was reported by EPA Method 8270 instead of EPA Method 8270 SIM because of its elevated concentration for sample BW-5C

Method 80156D DRO/MRO: The method blank had a low-level detection for DRO. Samples with detections are flagged with a "B". The laboratory control spike (LCS) had an elevated recovery.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

B – Analyte detected in the associated method blank.

E – Above quantitation range / estimated value. *This flag was mistakenly applied according to the results reported.*

J – Analyte detected below quantitation limits.

J3 – The associated batch QC was outside the established quality control range for precision.

J6 – The sample matrix interfered with the ability to make any accurate determination; spike value is low.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? No

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. The laboratory noted that the shipping containers were sealed, and custody seals were present and intact on the shipping containers.

The trip blank sample was received by the laboratory, but the parameters requested were not indicated on the CoC. The laboratory logged in the sample and performed the appropriate volatile analyses. Validation action was not required.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| <u>Method</u> | <u>Sample(s)</u> | <u>Analyte(s)</u> | <u>Dilution Factor</u> |
|---------------|------------------|-----------------------------------|------------------------|
| 200.7 | MKTF-43 | Total Metals | 5 |
| 200.8 | OW-10, BW-5C | Select Total and Dissolved Metals | 5 |
| 200.8 | MKTF-43 | Dissolved Metals | 10 |
| 200.8 | MKTF-43 | Total Metals | 20 |

| VALIDATION CRITERIA CHECKLIST | |
|--|-----|
| 5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? | No |
| <p>Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.</p> <p>The CoC requested total and dissolved metals using only Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> <p>The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> | |
| 6. Were samples received in good condition within method-specified requirements? | No |
| <p>Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ at 0.4°C to 3.1°C as noted on Sample Log-in Check List. Samples transferred to Pace National were received in good condition with the cooler temperature outside the recommended range at 0.4°C as noted on the CoC.</p> <p>The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen.</p> | |
| 7. Were samples extracted/digested and analyzed within method-specified or technical holding times? | Yes |
| Comments: The samples were extracted/digested and analyzed within method-specific holding times. | |
| 8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. | Yes |
| Comments: The results were reported in concentration units of micrograms per liter ($\mu\text{g/L}$) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested. | |
| 9. Did the laboratory provide any specific initial and/or continuing calibration results? | No |
| Comments: Initial and continuing calibration data were not included as part of this data set. | |
| 10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? | N/A |
| Comments: Initial and continuing calibration data were not included as part of this data set. | |
| 11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | Yes |
| Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples. | |

VALIDATION CRITERIA CHECKLIST

12. Were target analytes reported as not detected in the laboratory blanks? No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

| Method | Analyte | Batch | Concentration |
|--------|------------|-------|---------------|
| 200.7 | Total Zinc | 72387 | 0.0051 mg/L |
| 8015D | TPH DRO | 72336 | 0.079 mg/L |

Detections of total zinc and TPH DRO in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of total zinc and TPH DRO in the associated samples that were greater than the reporting limits but less than or equal to 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples did not require qualification.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| Method | Analytes | Batch | MS Sample Source |
|-----------|-----------------------------|-----------|----------------------|
| 200.7 | Total Metals | 72387 | Not Prepared |
| 200.7 | Dissolved Metals | A93766 | Not Prepared |
| 200.8 | Total Metals | 72387 | Not Prepared |
| 200.8 | Dissolved Metals | A93855 | Not Prepared |
| 200.8 | Dissolved Metals | A93877 | Not Prepared |
| 200.8 | Dissolved Metals | A93915 | Not Prepared |
| 245.1 | Total and Dissolved Mercury | 72445 | EB-12-22-22 |
| 504.1 | EDB | 72358 | Not Prepared |
| 4500CN E | Cyanide | WG1980609 | Not Associated |
| 4500CN E | Cyanide | WG1980984 | MKTF-43, FB-12-22-22 |
| 8015D | TPH DRO and MRO | 72336 | Not Prepared |
| 8015D | TPH GRO | R93580 | OW-1 |
| 8015D | TPH GRO | R93606 | Not Prepared |
| 8260B | VOCs | R93684 | Not Prepared |
| 8270C SIM | SVOCs | 72320 | Not Prepared |
| 8270C | SVOCs | 72320 | Not Prepared |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The MS/MSD percent recoveries and RPDs for project samples were within data validation or laboratory QC limits.

The MS recovery for cyanide in Method 4500CN E batch WG1980984 was outside the laboratory QC limits of 90.0-110% at 89.3%. However, the recovery was within data validation limits of 75-125%. Validation action was not required.

The percent recoveries and RPD values for MS/MSDs prepared from non-project samples were evaluated and considered, but data were not qualified based on those results since matrix similarity to project samples could not be guaranteed.

VALIDATION CRITERIA CHECKLIST

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits |
|--------|--------------|-------|--------------|---------------|--------------------|
| 200.7 | Total Cobalt | 72387 | 195% | ----- | 70-130% |
| 8015D | TPH DRO | 72336 | 137% | 134% | 31.2-125% |

Detections of total cobalt and TPH DRO were assigned J+ qualifiers due to evidence of potential high bias. Non-detections of total cobalt in the associated samples did not require qualification.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

| Method | Surrogate | Sample | Surrogate Recovery | QC Limits |
|--------|-----------------------|---------|--------------------|-----------|
| 8270C | 2-Fluorophenol | MKTF-43 | 1.10% | 15-84.5% |
| 8270C | Phenol-d ₅ | MKTF-43 | 4.92% | 15-67% |
| 8270C | 2,4,6-Tribromophenol | MKTF-43 | 1.52% | 15-108% |

Since Method 8270C surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range.

The analytes in the acid fraction of sample MKTF-43 were not detected. Since the recoveries of the surrogates in sample MKTF-43 were less than 10%, the results for the associated acid fraction analytes were assigned R qualifiers to indicate rejected (not usable) data based on evidence of extreme low bias.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB-12-22-22, and one equipment blank sample, EB-12-22-22, were collected as part of this sample set.

VALIDATION CRITERIA CHECKLIST

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration (mg/L)</u> |
|------------------------|---------------|--------------------------|-----------------------------|
| EB-12-22-22 | 8015D | TPH DRO | 0.019 |
| EB-12-22-22 | 245.1 | Total Mercury | 0.00014 |
| EB-12-22-22 | 245.1 | Dissolved Mercury | 0.00013 |

Detections of total mercury and dissolved mercury in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of total mercury in the associated samples that were greater than the reporting limits but less than 10 times the blank results were assigned JB qualifiers.

The TPH DRO results in Method 8015D batch 72366 were previously qualified due to a laboratory blank detection; therefore, additional qualification due to the equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples.

Sample Dup-12-22-22 was collected as a field duplicate of sample OW-1.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? Yes

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples.

22. For laboratory duplicates prepared from project samples, were RPDs within data validation or laboratory QC limits? N/A

Comments: Laboratory duplicates were prepared for the analysis of cyanide in batch WG1980609 from samples not associated with this data set and the analysis of cyanide in batch WG1980984 from samples MKTF-44 and OW-10.

The RPDs for laboratory duplicates prepared from project samples were not applicable because the measurements were reported as not detected in samples MKTF-44 and OW-10.

The RPD value for the laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

VALIDATION CRITERIA CHECKLIST

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)?

N/A

Comments: Target analytes were not reported by more than one method.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results?

No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
|------------------|----------------|----------------------------|--------------------------------|
| OW-1 | Mercury | 0.00012 | 0.00014 |
| BW-5B | Arsenic | 0.0013 | 0.0017 |
| BW-5C | Arsenic | ND | 0.0013 |
| OW-1 | Barium | 0.034 | 0.035 |
| MKTF-43 | Beryllium | ND | 0.00085 |
| MKTF-43 | Nickel | ND | 0.0056 |
| BW-4B | Selenium | ND | 0.0016 |
| BW-5B | Selenium | 0.0015 | 0.0064 |
| BW-5C | Selenium | ND | 0.010 |
| DUP-12-22-22 | Selenium | ND | 0.0044 |
| MKTF-43 | Selenium | ND | 0.088 |
| MKTF-44 | Selenium | 0.014 | 0.015 |
| OW-1 | Selenium | 0.0015 | 0.0047 |
| OW-10 | Selenium | 0.0076 | 0.015 |
| BW-5C | Silver | ND | 0.0013 |
| MKTF-43 | Silver | ND | 0.025 |
| MKTF-43 | Vanadium | ND | 0.0058 |
| BW-5C | Zinc | ND | 0.0088 |
| BW-5B | Zinc | ND | 0.011 |
| OW-10 | Zinc | ND | 0.0069 |

The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

FIELD DUPLICATE SUMMARY

| Client Sample ID: OW-1
Field Duplicate Sample ID: DUP-12-22-22 | | | | |
|--|---------|-------------------|------------------|-----------------------------------|
| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
| Barium, Dissolved | E 200.7 | 0.035 mg/L | 0.034 mg/L | 2.9% |
| Barium, Total | E 200.7 | 0.034 mg/L | 0.037 mg/L | 8.5% |
| Vanadium, Dissolved | E 200.7 | 0.044 mg/L | 0.043 mg/L | 2.3% +/-RL |
| Vanadium, Total | E 200.7 | 0.049 mg/L | 0.052 mg/L | 5.9% +/-RL |
| Arsenic, Dissolved | E200.8 | 0.00078 mg/L | 0.00075 mg/L | 3.9% +/-RL |
| Arsenic, Total | E200.8 | 0.00088 mg/L | 0.00092 mg/L | 4.4% +/-RL |
| Selenium, Dissolved | E200.8 | 0.0047 mg/L | 0.0044 mg/L | 6.6% |
| Selenium, Total | E200.8 | 0.0015 mg/L | ND (0.0010 mg/L) | DL |
| Mercury, Dissolved | E245.1 | 0.00014 mg/L | 0.00012 mg/L | 15.4% +/-RL |
| Mercury, Total | E245.1 | 0.00012 mg/L | 0.00012 mg/L | 0.0% +/-RL |
| TPH DRO | SW8015 | 0.028 mg/L | 0.029 mg/L | 3.5% +/-RL |
| <p>Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.</p> <p>DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).</p> <p>+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.</p> | | | | |

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| EBD | Equipment blank detection |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-SUR | The surrogate percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| MBD | Method blank detection |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |

| Analyte | Method | Field Sample ID | Lab Sample ID | Result | Limit | Units | Reviewer Qualifier | DV Flag Reasons |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-12-27-22 | 2212e09-001 |
| OW-50 | 2212e09-002 |

| OW-66 | 2212e09-006 |
| OW-55 | 2212e09-007 |
| FB-12-27-22 | 2212e09-008 |
| Dup-12-27-22 | 2212e09-009 |
| Trip Blank | 2212e09-010 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ⊗ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ✓ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Trip, Field, and Equipment Blanks (Items 18 and 19)
- ✓ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| J- | The result is an estimated concentration, but may be biased low |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 630 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformances related to this data set.

Method 8270C and Method 8270C SIM: 1-Methylnaphthalene, 2-methylnaphthalene, and naphthalene were reported by EPA Method 8270 instead of EPA Method 8270 SIM because of their elevated concentrations for samples OW-55 and OW-66.

Method 80156D DRO/MRO: The method blank had a low-level detection for DRO. Samples with detections are flagged with a "B".

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

B – Analyte detected in the associated method blank.

D – Sample diluted due to matrix.

J – Analyte detected below quantitation limits.

J6 – The sample matrix interfered with the ability to make any accurate determination; spike value is low.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? No

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. The laboratory noted that the shipping containers were sealed, and custody seals were present and intact on the shipping containers.

The trip blank sample was received by the laboratory, but the parameters requested were not indicated on the CoC. The laboratory logged in the sample and performed the appropriate volatile analyses. Validation action was not required.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| Method | Sample(s) | Analyte(s) | Dilution Factor |
|--------|--------------|---------------------------------|-----------------|
| 8015D | OW-66, OW-55 | TPH DRO and MRO | 2 |
| 8260B | OW-29 | Select VOCs | 2 |
| 200.7 | OW-66 | Total and Dissolved Barium | 5 |
| 200.8 | OW-54 | Total Lead | 5 |
| 8260B | OW-54 | Select VOCs | 5 |
| 8260B | OW-29 | MTBE | 20 |
| 8015D | OW-66, OW-55 | TPH GRO | 50 |
| 8260B | OW-54 | MTBE | 50 |
| 8260B | OW-66, OW-55 | Select VOCs | 50 |
| 8260B | OW-66 | Benzene, Toluene, Total Xylenes | 500 |

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? No

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.

| VALIDATION CRITERIA CHECKLIST | |
|--|-----|
| <p>The CoC requested total and dissolved metals using only Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> <p>The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> | |
| 6. Were samples received in good condition within method-specified requirements? | No |
| <p>Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ between 0.2°C and 4.6°C as noted on Sample Log-in Check List. Samples transferred to Pace National were received in good condition with the cooler temperature within the recommended range at 2.5°C as noted on the CoC.</p> <p>The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen.</p> | |
| 7. Were samples extracted/digested and analyzed within method-specified or technical holding times? | Yes |
| <p>Comments: The samples were extracted/digested and analyzed within method-specific holding times.</p> | |
| 8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. | Yes |
| <p>Comments: The results were reported in concentration units of micrograms per liter ($\mu\text{g/L}$) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.</p> | |
| 9. Did the laboratory provide any specific initial and/or continuing calibration results? | No |
| <p>Comments: Initial and continuing calibration data were not included as part of this data set.</p> | |
| 10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? | N/A |
| <p>Comments: Initial and continuing calibration data were not included as part of this data set.</p> | |
| 11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | Yes |
| <p>Comments: The number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.</p> | |

VALIDATION CRITERIA CHECKLIST

12. Were target analytes reported as not detected in the laboratory blanks? No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

| Method | Analyte | Batch | Concentration |
|--------|----------------|-------|---------------|
| 200.7 | Total Zinc | 72409 | 0.0045 mg/L |
| 200.8 | Total Antimony | 72409 | 0.00062 mg/L |
| 245.1 | Mercury | 72446 | 0.000099 mg/L |
| 8015D | TPH DRO | 72386 | 0.10 mg/L |

Detections of total zinc, total and dissolved mercury, and TPH DRO in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of total zinc, total mercury, and TPH DRO in the associated samples that were greater than the reporting limits but less than or equal to 10 times the blank results were assigned JB qualifiers. Non-detections of these analytes in the associated samples and results greater than ten times the blank concentration did not require qualification.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| Method | Analytes | Batch | MS Sample Source |
|-----------|-----------------------------|-----------|-----------------------|
| 200.7 | Total Metals | 72409 | Not Prepared |
| 200.7 | Dissolved Zinc | A93838 | OW-52 |
| 200.7 | Dissolved Metals | B93766 | Not Prepared |
| 200.8 | Total Metals | 72409 | OW-50, EB-12-27-22 |
| 200.8 | Dissolved Metals | A93855 | Not Prepared |
| 245.1 | Total and Dissolved Mercury | 72446 | Not Prepared |
| 504.1 | EDB | 72358 | Not Prepared |
| 4500CN E | Cyanide | WG1980984 | Not Associated |
| 4500CN E | Cyanide | WG1981929 | OW-55, Not Associated |
| 8015D | TPH DRO and MRO | 72386 | Not Prepared |
| 8015D | TPH GRO | R93693 | OW-66 |
| 8260B | VOCs | R93710 | Not Prepared |
| 8270C SIM | SVOCs | 72347 | Not Prepared |
| 8270C | SVOCs | R93725 | Not Prepared |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? No

Comments: The MS/MSD percent recoveries and RPDs for project samples were within data validation or laboratory QC limits, with the following exception.

The recovery for TPH GRO in the MS for Method 8015D batch R93693 was outside the QC limits of 70-130% at 43.0%. Detections of TPH GRO in the associated samples were qualified as J-, and non-detections were qualified as UJ due to evidence of potential low bias.

The percent recoveries and RPD values for MS/MSDs prepared from non-project samples were evaluated and considered but data were not qualified based on those results since matrix similarity to project samples could not be guaranteed.

VALIDATION CRITERIA CHECKLIST

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits |
|--------|------------------|--------|--------------|---------------|--------------------|
| 200.7 | Total Cobalt | 72409 | 140% | ----- | 70-130% |
| 200.7 | Total Nickel | 72409 | 139% | ----- | 70-130% |
| 200.7 | Dissolved Nickel | B93766 | 68.9% | ----- | 70-130% |
| 200.8 | Total Selenium | 72409 | 69.0% | ----- | 70-130% |
| 245.1 | Mercury | 72446 | 144% | ----- | 70-130% |

Detections of total cobalt, total nickel, and mercury were assigned J+ qualifiers due to evidence of potential high bias. Non-detections of total cobalt and mercury in the associated samples did not require qualification.

Detections of dissolved nickel and total selenium were assigned J- qualifiers, and non-detections of dissolved nickel and total selenium were qualified as UJ due to evidence of potential low bias.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

Since Method 8270C surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the Method 8270C analysis of sample OW-66 since only the recovery for the surrogate 2-fluorophenol was outside laboratory limits of 15-84.5% at 0%, and qualification of sample data was not required.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB-12-27-22, and one equipment blank sample, EB-12-27-22, were collected as part of this sample set.

VALIDATION CRITERIA CHECKLIST

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration (mg/L)</u> |
|------------------------|---------------|---------------------------|-----------------------------|
| EB-12-27-22 | 8015D | TPH DRO | 0.041 |
| EB-12-27-22 | 200.7 | Dissolved Vanadium | 0.0017 |
| EB-12-27-22 | 245.1 | Total Mercury | 0.000099 |
| EB-12-27-22 | 245.1 | Dissolved Mercury | 0.00010 |

Detections of dissolved vanadium in the associated samples that were less than the applicable reporting limits were assigned U qualifiers.

The TPH DRO results in Method 8015D batch 72386 were previously qualified due to a laboratory blank detection; therefore, additional qualification due to the equipment blank detection was not required.

The total and dissolved mercury results in Method 245.1 batch 72446 were previously qualified due to laboratory blank detections; therefore, additional qualification due to the equipment blank detections was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples.

Sample Dup-12-27-22 was collected as a field duplicate of sample OW-50.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? Yes

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples.

22. For laboratory duplicates prepared from project samples, were RPDs within data validation or laboratory QC limits? Yes

Comments: Laboratory duplicates were prepared for the analysis of cyanide in batch WG1980984 from samples not associated with this data set, and the analysis of cyanide in batch WG1981929 from sample OW-66 and from a sample not associated with this data set.

The RPD for the laboratory duplicate prepared from project sample OW-66 was within laboratory acceptance limits

The RPD value for the laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

VALIDATION CRITERIA CHECKLIST

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? Yes

Comments: Target analytes were not reported by more than one method.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
|------------------|----------------|----------------------------|--------------------------------|
| OW-52 | Mercury | 0.000097 | 0.00012 |
| OW-54 | Arsenic | 0.0040 | 0.0054 |
| OW-55 | Arsenic | 0.0059 | 0.0095 |
| OW-50 | Barium | 0.052 | 0.053 |
| OW-52 | Barium | 0.027 | 0.028 |
| OW-29 | Barium | 0.086 | 0.091 |
| DUP-12-27-22 | Barium | 0.049 | 0.053 |
| DUP-12-27-22 | Selenium | ND | 0.0017 |
| OW-29 | Selenium | 0.0012 | 0.0069 |
| OW-50 | Selenium | ND | 0.0019 |
| OW-52 | Selenium | ND | 0.0012 |
| OW-54 | Selenium | 0.0028 | 0.0092 |
| OW-66 | Selenium | 0.0018 | 0.0059 |
| EB-12-27-22 | Vanadium | ND | 0.0017 |
| OW-50 | Vanadium | ND | 0.0025 |
| OW-52 | Vanadium | ND | 0.0027 |
| OW-29 | Vanadium | ND | 0.0025 |
| DUP-12-27-22 | Vanadium | ND | 0.0021 |
| OW-50 | Zinc | 0.0044 | 0.0073 |
| OW-52 | Zinc | 0.0092 | 0.014 |
| OW-29 | Zinc | ND | 0.024 |

The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

FIELD DUPLICATE SUMMARY

| Client Sample ID: OW-50
Field Duplicate Sample ID: DUP-12-27-22 | | | | |
|--|---------|-------------------|------------------|-----------------------------------|
| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
| MTBE | SW8260B | 69 µg/L | 64 µg/L | 7.5% |
| TPH GRO | SW8015 | 0.062 mg/L | 0.063 mg/L | 1.6% +/-RL |
| TPH DRO | SW8015 | 0.023 mg/L | 0.059 mg/L | 87.8% +/-RL |
| Barium, Dissolved | E 200.7 | 0.053 mg/L | 0.053 mg/L | 0.0% |
| Barium, Total | E 200.7 | 0.052 mg/L | 0.049 mg/L | 5.9% |
| Vanadium, Dissolved | E 200.7 | 0.0025 mg/L | 0.0021 mg/L | 17.4% +/-RL |
| Zinc, Dissolved | E 200.7 | 0.0073 mg/L | ND (0.010 mg/L) | DL |
| Zinc, Total | E 200.7 | 0.0044 mg/L | ND (0.010 mg/L) | DL |
| Arsenic, Dissolved | E200.8 | 0.0028 mg/L | 0.0026 mg/L | 7.4% |
| Arsenic, Total | E200.8 | 0.0023 mg/L | 0.0021 mg/L | 9.1% |
| Mercury, Dissolved | E245.1 | 0.00010 mg/L | 0.00010 mg/L | 0.0% +/-RL |
| Mercury, Total | E245.1 | 0.00010 mg/L | 0.00011 mg/L | 9.5% +/-RL |
| <p>Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.</p> <p>DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).</p> <p>+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.</p> | | | | |

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|--|
| EBD | Equipment blank detection |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-LCS | The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| LR-MS | The MS and/or MSD percent recovery was less than the lower acceptable limit indicating possible matrix interference. |
| MBD | Method blank detection |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |

| Analyte | Method | Field Sample ID | Lab Sample ID | Result | Limit | Units | Reviewer Qualifier | DV Flag Reasons |
|---------------------|---------|-----------------|---------------|---------|---------|-------|--------------------|--------------------|
| 1,4-Dioxane | SW8270C | OW-29 | 2212E09-004C | 0.86 | 1.0 | µg/L | J | MDLRL |

| Reviewer: Mike Phillips, Senior Chemist | |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-12-28-22 | 2212E57-001 |
| OW-13 | 2212E57-002 |
| OW-56 | 2212E57-003 |
| OW-59 | 2212E57-004 |
| OW-67 | 2212E57-005 |
| OW-68 | 2212E57-006 |
| OW-60 | 2212E57-007 |
| FB-12-28-22 | 2212E57-008 |
| Dup-12-28-22 | 2212E57-009 |
| Trip Blank | 2212E57-010 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ⊗ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Trip, Field, and Equipment Blanks (Items 18 and 19)
- ✓ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| J- | The result is an estimated concentration, but may be biased low |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |
| R | Rejected, data not usable |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 630 data points. The data completeness calculation does not include any submitted blank sample results. Twenty-one data points were rejected. The data completeness measure for this data package is calculated to be 96.67% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformances related to this data set.

Method 80156D DRO/MRO: The method blank had a low-level detection for DRO. Samples with detections are flagged with a "B". The laboratory control spike for DRO/MRO had an elevated recovery for OW-67, OW-68, OW60, and Dup-12-28-22.

Method 80156D GRO: The surrogate recoveries for OW-56, OW59, OW67, OW 68, and OW60 all had elevated surrogate recoveries because of matrix interference. A large peak was detected at the same retention time as the surrogate.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

B – Analyte detected in the associated method blank.

E – Above quantitation range / estimated value. *This flag was mistakenly applied according to the results reported.*

J – Analyte detected below quantitation limits.

R – % RPD outside of range.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? No

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present because the samples were transferred to a laboratory field courier service for transport from the field to the laboratory, and custody was maintained at all times.

The trip blank sample was received by the laboratory, but the parameters requested were not indicated on the CoC. The laboratory logged in the sample and performed the appropriate volatile analyses. Validation action was not required.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| Method | Sample(s) | Analyte(s) | Dilution Factor |
|--------|---------------------|-------------------------|-----------------|
| 200.7 | OW-60 | Dissolved Metals | 5 |
| 200.8 | OW-67 | Select Dissolved Metals | 5 |
| 200.8 | OW-59, OW-67, OW-68 | Total Metals | 5 |
| 200.7 | Dup-12-28-22 | Dissolved Metals | 10 |

| VALIDATION CRITERIA CHECKLIST | |
|--|-----|
| 5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? | No |
| <p>Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.</p> <p>The CoC requested total and dissolved metals using only Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> <p>The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> | |
| 6. Were samples received in good condition within method-specified requirements? | No |
| <p>Comments: Samples were received on ice, in good condition, and with the cooler temperatures outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ between 0.2°C to 1.1°C as noted on Sample Log-in Check List and on the CoC. Samples transferred to Pace National were received in good condition with the cooler temperature outside the recommended range at 1.6°C as noted on the CoC.</p> <p>The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen.</p> | |
| 7. Were samples extracted/digested and analyzed within method-specified or technical holding times? | Yes |
| Comments: The samples were extracted/digested and analyzed within method-specific holding times. | |
| 8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. | Yes |
| Comments: The results were reported in concentration units of micrograms per liter ($\mu\text{g/L}$) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested. | |
| 9. Did the laboratory provide any specific initial and/or continuing calibration results? | No |
| Comments: Initial and continuing calibration data were not included as part of this data set. | |
| 10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? | N/A |
| Comments: Initial and continuing calibration data were not included as part of this data set. | |
| 11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | Yes |
| Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples. | |

VALIDATION CRITERIA CHECKLIST

12. Were target analytes reported as not detected in the laboratory blanks? No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

| Method | Analyte | Batch | Concentration |
|--------|----------------|-------|---------------|
| 200.7 | Total Zinc | 72409 | 0.0045 mg/L |
| 200.8 | Total Antimony | 72409 | 0.00062 mg/L |
| 8015D | TPH DRO | 72386 | 0.10 mg/L |
| 8015D | TPH DRO | 72395 | 0.10 mg/L |

Detections of total zinc and TPH DRO in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of total zinc and TPH DRO in the associated samples that were greater than the reporting limits but less than or equal to 10 times the blank results were assigned JB qualifiers. Non-detections of these analytes in the associated samples and results greater than ten times the blank concentration did not require qualification.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| Method | Analytes | Batch | MS Sample Source |
|-----------|-----------------------------|-----------|-----------------------|
| 200.7 | Total Metals | 72409 | EB-12-28-22, OW-13 |
| 200.7 | Dissolved Metals | A93838 | Not Prepared |

| 200.7 | Dissolved Metals | C93766 | OW-56 |
| 200.8 | Total Metals | 72409 | Not Prepared |
| 200.8 | Dissolved Metals | A93877 | Not Prepared |
| 200.8 | Dissolved Metals | B93855 | EB-12-28-22, OW-13 |
| 245.1 | Total and Dissolved Mercury | 72553 | Dup-12-28-22 |
| 504.1 | EDB | 72430 | Not Prepared |
| 4500CN E | Cyanide | WG1981929 | Not Associated, OW-13 |
| 8015D | TPH DRO and MRO | 72386 | Not Prepared |
| 8015D | TPH DRO and MRO | 72395 | Not Prepared |
| 8015D | TPH GRO | R93693 | Not Prepared |
| 8260B | VOCs | R93727 | Not Prepared |
| 8260B | VOCs | R93747 | Not Prepared |
| 8270C SIM | SVOCs | 72406 | Not Prepared |
| 8270C | SVOCs | 72406 | Not Prepared |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

VALIDATION CRITERIA CHECKLIST

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? No

Comments: The MS/MSD percent recoveries and RPDs for project samples were within data validation or laboratory QC limits, with the following exception.

The MS percent recovery for total zinc in Method 200.7 batch 72409 was outside the QC limits of 75-125% at 127%. Detections of total zinc in the associated samples were assigned J+ qualifiers due to evidence of potential high bias. Non-detections of total zinc in the associated samples did not require qualification based on this non-conformance. The percent recoveries and RPD values for MS/MSDs prepared from non-project samples were evaluated and considered but data were not qualified based on those results since matrix similarity to project samples could not be guaranteed.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits | LCS/LCSD RPD | RPD QC Limits |
|--------|------------------|--------|--------------|---------------|--------------------|--------------|---------------|
| 200.7 | Total Cobalt | 72409 | 140% | ----- | 70-130% | ----- | ----- |
| 200.7 | Total Nickel | 72409 | 139% | ----- | 70-130% | ----- | ----- |
| 200.7 | Dissolved Nickel | B93766 | 68.9% | ----- | 70-130% | ----- | ----- |
| 200.8 | Total Selenium | 72409 | 69.0% | ----- | 70-130% | ----- | ----- |
| 8015D | TPH DRO | 72395 | 138% | Acceptable | 31.2-125% | 25.2% | 20% |

Detections of total cobalt, total nickel, and TPH DRO in the associated samples were assigned J+ qualifiers due to evidence of potential high bias. Non-detections of total cobalt and total nickel in the associated samples did not require qualification.

Detections of total selenium were assigned J- qualifiers, and non-detections of dissolved nickel and total selenium were qualified as UJ due to evidence of potential low bias.

TPH DRO was detected in the associated samples, and these results were qualified as J due to evidence of poor precision.

VALIDATION CRITERIA CHECKLIST

17. Were surrogate recoveries within laboratory QC limits?

No

Comments: Surrogate recoveries were within QC limits, with the following exceptions.

| Method | Surrogate | Sample | Surrogate Recovery | QC Limits |
|--------|-----------------------|--------|--------------------|-----------|
| 8015D | BFB | OW-56 | 551% | 70-130% |
| 8260B | Dibromofluoromethane | OW-56 | 144% | 70-130% |
| 8015D | BFB | OW-59 | 5,320% | 70-130% |
| 8270C | 2-Fluorophenol | OW-59 | 9.65% | 15-84.5% |
| 8270C | 2,4,6-Tribromophenol | OW-59 | 5.51% | 15-108% |
| 8015D | BFB | OW-67 | 607% | 70-130% |
| 8270C | 2-Fluorophenol | OW-67 | 1.92% | 15-84.5% |
| 8270C | Phenol-d ₅ | OW-67 | 6.32% | 15-67% |
| 8270C | 2,4,6-Tribromophenol | OW-67 | 2.88% | 15-108% |
| 8015D | BFB | OW-68 | 2,720% | 70-130% |
| 8270C | 2-Fluorophenol | OW-68 | 3.37% | 15-84.5% |
| 8270C | Phenol-d ₅ | OW-68 | 10.7% | 15-67% |
| 8270C | 2,4,6-Tribromophenol | OW-68 | 5.87% | 15-108% |
| 8015D | BFB | OW-60 | 134% | 70-130% |
| 8270C | 2-Fluorophenol | OW-60 | 12.2% | 15-84.5% |
| 8270C | 2,4,6-Tribromophenol | OW-60 | 7.99% | 15-108% |

TPH GRO was detected in the Method 8015D analysis of samples OW-56, OW-59, OW-67, and OW-68, and these results were assigned J+ qualifiers due to evidence of potential high bias. TPH GRO was not detected in sample OW-60, and qualification of data was not required.

Since Method 8260B surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes when one or more surrogates was outside the acceptance range. **The associated target analytes in sample OW-56 with the surrogate dibromofluoromethane recovery that was greater than the upper laboratory QC limit were qualified as J+ if detected in affected samples due to potential high bias.** Qualification was not required for non-detected analytes associated with this surrogate.

Since Method 8270C surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. **The analytes in the acid fraction of samples OW-59, OW-67, OW-68, and OW-60 were not detected. Since the recoveries of at least 2 of 3 surrogates in samples OW-59, OW-67, and OW-68 were less than 10%, the results for the associated acid fraction analytes were assigned R qualifiers to indicate rejected (not usable) data based on evidence of extreme low bias. Only 1 of 3 acid fraction surrogates was less than 10% for sample OW-60; therefore, the associated acid fraction analytes were assigned UJ qualifiers due to evidence of potential low bias.**

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit?

Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB-12-28-22, and one equipment blank sample, EB-12-28-22, were collected as part of this sample set.

VALIDATION CRITERIA CHECKLIST

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration (mg/L)</u> |
|------------------------|---------------|--------------------|-----------------------------|
| EB-12-28-22 | 200.7 | Dissolved Vanadium | 0.0020 |
| EB-12-28-22 | 245.1 | Total Mercury | 0.00018 |
| EB-12-28-22 | 245.1 | Dissolved Mercury | 0.000091 |
| EB-12-28-22 | 8015D | TPH DRO | 0.025 |

Detections of dissolved vanadium, total mercury, and dissolved mercury in the associated samples that were less than or equal to the applicable reporting limits were assigned U qualifiers. Detections of total and dissolved mercury in the associated samples that were greater than the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples did not require qualification.

The TPH DRO results in Method 8015D batch 72386 and batch 72395 were previously qualified due to laboratory blank detections; therefore, additional qualification due to the equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples.

Sample Dup-12-28-22 was collected as a field duplicate of sample OW-13.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? Yes

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples.

22. For laboratory duplicates prepared from project samples, were RPDs within data validation or laboratory QC limits? N/A

Comments: Laboratory duplicates were prepared for the analysis of cyanide in batch WG1981929 from samples not associated with this data set.

The RPD values for the laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

VALIDATION CRITERIA CHECKLIST

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)?

N/A

Comments: Target analytes were not reported by more than one method.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results?

No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
|------------------|----------------|----------------------------|--------------------------------|
| OW-13 | Mercury | 0.00017 | 0.00020 |
| OW-13 | Arsenic | 0.00061 | 0.0013 |
| DUP-12-28-22 | Arsenic | 0.00067 | 0.0010 |
| OW-13 | Barium | 0.019 | 0.020 |
| DUP-12-28-22 | Barium | 0.019 | 0.022 |
| OW-59 | Beryllium | ND | 0.00072 |
| OW-13 | Selenium | ND | 0.0022 |
| OW-56 | Selenium | 0.0023 | 0.0075 |
| OW-59 | Selenium | 0.0069 | 0.019 |
| OW-67 | Selenium | 0.0067 | 0.031 |
| OW-68 | Selenium | 0.0065 | 0.017 |
| OW-60 | Selenium | 0.016 | 0.034 |
| DUP-12-28-22 | Selenium | 0.0011 | 0.0022 |
| OW-59 | Silver | ND | 0.0028 |
| OW-67 | Silver | ND | 0.014 |
| OW-68 | Silver | ND | 0.0065 |
| EB-12-28-22 | Vanadium | ND | 0.0020 |
| OW-13 | Vanadium | ND | 0.0040 |
| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
| OW-60 | Vanadium | 0.011 | 0.015 |
| OW-13 | Zinc | ND | 0.016 |

The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

FIELD DUPLICATE SUMMARY

| Client Sample ID: OW-13
Field Duplicate Sample ID: DUP-12-28-22 | | | | |
|--|---------|-------------------|-------------------|-----------------------------------|
| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
| Barium, Dissolved | E 200.7 | 0.020 mg/L | 0.022 mg/L | 9.5% |
| Barium, Total | E 200.7 | 0.019 mg/L | 0.019 mg/L | 0.0% |
| Vanadium, Dissolved | E 200.7 | 0.0040 mg/L | ND (0.50 mg/L) | DL |
| Zinc, Dissolved | E 200.7 | 0.016 mg/L | ND (0.10 mg/L) | DL |
| Zinc, Total | E 200.7 | ND (0.010 mg/L) | 0.0068 mg/L | DL |
| Arsenic, Dissolved | E200.8 | 0.0013 mg/L | 0.0010 mg/L | 26.1% +/-RL |
| Arsenic, Total | E200.8 | 0.00061 mg/L | 0.00067 mg/L | 9.4% +/-RL |
| Selenium, Dissolved | E200.8 | 0.0022 mg/L | 0.0022 mg/L | 0.0% |
| Selenium, Total | E200.8 | ND (0.0010 mg/L) | 0.0011 mg/L | DL |
| Mercury, Dissolved | E245.1 | 0.00020 mg/L | ND (0.00020 mg/L) | DL |
| Mercury, Total | E245.1 | 0.00017 mg/L | ND (0.00020 mg/L) | DL |
| TPH DRO | SW8015 | 0.061 mg/L | 0.059 mg/L | 3.3% +/-RL |
| TPH GRO | SW8015 | 0.098 mg/L | 0.094 mg/L | 4.2% +/-RL |
| MTBE | SW8260B | 97 µg/L | 99 µg/L | 2.0% |
| <p>Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.</p> <p>DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).</p> <p>+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.</p> | | | | |

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| EBD | Equipment blank detection |
| ERPDLCS | The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision. |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| HR-SUR | The surrogate percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-LCS | The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| LR-SUR | The surrogate percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| HR-MS | The MS and/or MSD percent recovery was greater than the upper acceptable limit indicating possible matrix interference. |
| MBD | Method blank detection |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |

| Analyte | Method | Field Sample ID | Lab Sample ID | Result | Limit | Units | Reviewer Qualifier | DV Flag Reasons |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-12-29-22 | 2212F05-001 |
| OW-30 | 2212F05-002 |
| OW-14 | 2212F05-003 |
| STP-1 to EP-2 | 2212F05-004 |
| MKTF-41 | 2212F05-005 |
| MKTF-32 | 2212F05-006 |
| FB-12-29-22 | 2212F05-007 |
| Dup-12-29-22 | 2212F05-008 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ⊗ Laboratory Qualifiers (Item 2)
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ✓ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field and Equipment Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| J- | The result is an estimated concentration, but may be biased low |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 542 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformances related to this data set.

Method 9223B: The sample to be analyzed for E. Coli was received on Friday 12/30/2022 and the laboratory was not accepting E. Coli samples on this day due to the New Year holiday.

Method 8015D DRO: The method blank had a low-level detection for TPH DRO. Samples with detections are flagged with a "B". The laboratory control spike for DRO / MRO had an elevated recovery.

Method 8270C SIM: The 1,4-dioxane detection for sample MKTF-32 is "E" flagged because the result is above the calibration range.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

B – Analyte detected in the associated method blank.

E – Estimated value. **TPH DRO results for multiple samples and the 1,4-dioxane for sample MKTF-32 were flagged by the laboratory with the E flag. These results were detections and were assigned J qualifiers based on the laboratory flags.**

J – Analyte detected below quantitation limits.

J5 – The sample matrix interfered with the ability to make any accurate determination; spike value is high.

R – % RPD outside of range.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present because the samples were transferred to a laboratory field courier service for transport from the field to the laboratory, and custody was maintained at all times.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| Method | Sample(s) | Analyte(s) | Dilution Factor |
|--------|------------------------------|----------------------------|-----------------|
| 200.7 | OW-30, MKTF-41 | Dissolved Metals | 5 |
| 200.7 | OW-14 | Total and Dissolved Barium | 5 |
| 200.8 | MKTF-41 | Dissolved Arsenic | 5 |
| 8260B | OW-30, MKTF-32, Dup-12-29-22 | MTBE | 10 |
| 8015D | OW-14 | TPH GRO | 50 |
| 8260B | OW-14 | Select VOCs | 50 |
| 8260B | OW-14 | Benzene | 500 |

| VALIDATION CRITERIA CHECKLIST | |
|--|-----|
| 5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? | No |
| <p>Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.</p> <p>The CoC requested total and dissolved metals using only Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> <p>The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> | |
| 6. Were samples received in good condition within method-specified requirements? | No |
| <p>Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ between 0.5°C and 2.2°C as noted on the CoC and Sample Log-in Check List. Samples transferred to Pace National were received in good condition with the cooler temperature within the recommended range at 5.0°C as noted on the CoC.</p> <p>The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen.</p> | |
| 7. Were samples extracted/digested and analyzed within method-specified or technical holding times? | Yes |
| <p>Comments: The samples were extracted/digested and analyzed within method-specific holding times.</p> | |
| 8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. | Yes |
| <p>Comments: The results were reported in concentration units of micrograms per liter ($\mu\text{g/L}$) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.</p> | |
| 9. Did the laboratory provide any specific initial and/or continuing calibration results? | No |
| <p>Comments: Initial and continuing calibration data were not included as part of this data set.</p> | |
| 10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? | N/A |
| <p>Comments: Initial and continuing calibration data were not included as part of this data set.</p> | |
| 11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | Yes |
| <p>Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.</p> | |
| 12. Were target analytes reported as not detected in the laboratory blanks? | No |
| <p>Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exception.</p> <p>TPH DRO was detected in the laboratory blank for Method 8015D batch 72395 at a concentration of 0.10 mg/L. TPH DRO was detected in associated sample EB-12-29-22 at a concentration less than the laboratory reporting limit and the result was qualified with a U flag. TPH DRO results for the associated samples that were greater than the blank detection and the laboratory reporting limit but less than 10 times the blank concentration were qualified with a JB flag. Detections of this analyte in the associated samples greater than ten times the blank concentration did not require qualification.</p> | |

VALIDATION CRITERIA CHECKLIST

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>MS Sample Source</u> |
|---------------|-----------------------------|--------------|-------------------------|
| 200.7 | Total Metals | 72410 | Not Prepared |
| 200.7 | Dissolved Metals | A93838 | Not Prepared |
| 200.7 | Dissolved Zinc | A94009 | Not Prepared |
| 200.7 | Dissolved Metals | C93766 | Not Prepared |
| 200.8 | Total Metals | 72410 | Not Prepared |
| 200.8 | Dissolved Arsenic | A93877 | Not Prepared |
| 200.8 | Dissolved Metals | B93855 | Not Prepared |
| 245.1 | Total and Dissolved Mercury | 72676 | Not Prepared |
| 410.4 | COD | WG1983632 | Not Associated |
| 504.1 | EDB | 72430 | STP-1 to EP-2 |
| 4500CN E | Cyanide | WG1982605 | Not Associated |
| 5210B | BOD | 72380 | Not Prepared |
| 8015D | TPH DRO and MRO | 72395 | Not Prepared |
| 8015D | TPH GRO | R93719 | OW-30 |
| 8260B | VOCs | R93747 | OW-30 |
| 8260B | VOCs | R93792 | Not Prepared |
| 8270C | SVOCs | 72406 | Not Prepared |
| 8270C SIM | SVOCs | 72406 | Not Prepared |
| 8270C | SVOCs | 72443 | Not Prepared |
| 8270C SIM | SVOCs | 72443 | Not Prepared |
| 8270C SIM | SVOCs | R93750 | Not Prepared |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The percent recoveries and RPDs for MS/MSDs prepared from project samples were within data validation and laboratory QC limits.

The percent recoveries and RPD values for MS/MSDs prepared from non-project samples were evaluated and considered, but data were not qualified based on those results since matrix similarity to project samples could not be guaranteed.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

VALIDATION CRITERIA CHECKLIST

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits?

No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits | LCS/LCSD RPD | RPD QC Limits |
|-----------|---------------------|-------|--------------|---------------|--------------------|--------------|---------------|
| 200.7 | Total Barium | 72410 | 145% | ----- | 70-130% | ----- | ----- |
| 8015D | TPH DRO | 72395 | 138% | Acceptable | 31.2-125% | 25.2% | 20% |
| 8270C SIM | Naphthalene | 72443 | Acceptable | Acceptable | 15-78.3% | 63.0% | 31.7% |
| 8270C SIM | 1-Methylnaphthalene | 72443 | Acceptable | Acceptable | 15-79.6% | 70.6% | 31.4% |
| 8270C SIM | 2-Methylnaphthalene | 72443 | Acceptable | Acceptable | 15-78.6% | 76.9% | 30.5% |
| 8270C SIM | Acenaphthene | 72443 | Acceptable | Acceptable | 15-92% | 70.3% | 30.5% |
| 8270C SIM | Fluorene | 72443 | Acceptable | Acceptable | 15-96% | 50.5% | 25.1% |
| 8270C SIM | Phenanthrene | 72443 | Acceptable | Acceptable | 21-103% | 28.1% | 26.4% |
| 8270C SIM | Anthracene | 72443 | Acceptable | Acceptable | 21.1-106% | 19.5% | 14.4% |
| 5210B | BOD | 72380 | 69.2% | ----- | 84.6-115.4% | ----- | ----- |

Total barium and TPH DRO were detected in associated samples, and the results were qualified as J+ based on the evidence of potential high bias. Non-detections of total barium in the associated samples did not require qualification based on the evidence of potential high bias.

The analytes with LCS/LCSD RPD values that exceeded the QC limit were assigned J qualifiers for detections and UJ for non-detections for the associated samples due to evidence of poor precision.

The target analyte BOD was detected in associated sample STP-1 to EP-2, and the result was qualified as J- based on the evidence of potential low bias.

17. Were surrogate recoveries within laboratory QC limits?

No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

| Method | Surrogate | Sample | Surrogate Recovery | QC Limits |
|-----------|-----------------------------|---------|--------------------|-----------|
| 8270C | 2-Fluorophenol | MKTF-32 | 103% | 15-84.5% |
| 8270C | Phenol-d ₅ | MKTF-32 | 71.9% | 15-67% |
| 8270C | 2,4,6-Tribromophenol | MKTF-32 | 151% | 15-108% |
| 8270C | Nitrobenzene-d ₅ | MKTF-32 | 116% | 16.8-112% |
| 8270C | 2-Fluorobiphenyl | MKTF-32 | 106% | 15-101% |
| 8270C | 4-Terphenyl-d ₁₄ | MKTF-32 | 142% | 34.4-134% |
| 8270C | 2,4,6-Tribromophenol | OW-14 | 10.7% | 15-108% |
| 8270C SIM | Nitrobenzene-d ₅ | MKTF-32 | 113% | 15-108% |

Since Method 8270C and 8270C SIM surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the Method 8270C analysis of sample OW-14 and the Method 8270C SIM analysis of sample MKTF-32, and qualification of sample data was not required.

The associated analytes were not detected in sample MKTF-32. Qualification of data was not required due to evidence of potential high bias.

VALIDATION CRITERIA CHECKLIST

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One field blank sample, FB-12-29-22, and one equipment blank sample, EB-12-29-22, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration</u> |
|------------------------|---------------|----------------|----------------------|
| EB-9-9-22 | 200.7 | Total Zinc | 0.0065 mg/L |
| EB-9-9-22 | 200.8 | Total Selenium | 0.00090 mg/L |
| EB-9-9-22 | 8015D | TPH DRO | 0.024 mg/L |

Detections of total zinc in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of total zinc and total selenium in the associated samples that were greater than the reporting limits but less than 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples did not require qualification.

The TPH DRO results for the samples in batch 72395 were previously qualified due to a laboratory blank detection; therefore, additional qualification due to the equipment blank detection was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples.

Sample Dup-12-29-22 was collected as a field duplicate of sample OW-30.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? No

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exceptions.

The RPD value for dissolved barium greatly exceeded the data validation limit of 30% at 166.2%. The reported results for dissolved barium were assigned J qualifiers for the parent and field duplicate samples, and J/UJ qualifiers for the associated samples due to evidence of extremely poor precision (RPD > 100%).

The RPD value for total cyanide exceeded the data validation limit of 30% at 72.3%. The total cyanide results for samples OW-30 and Dup-12-29-22 were assigned J qualifiers due to evidence of poor precision.

VALIDATION CRITERIA CHECKLIST

22. For laboratory duplicates prepared from project samples, were RPDs within data validation or laboratory QC limits? N/A

Comments: Laboratory duplicates were prepared as summarized in the following table.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>Laboratory Duplicate Sample Source</u> |
|---------------|-----------------|--------------|---|
| 410.4 | COD | WG1983632 | Not Associated |
| 4500CN E | Cyanide | WG1982605 | Not Associated |

Not Associated – The laboratory duplicate sample source was not associated with this project.

The RPD values for the laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? Yes

Comments: Target analytes were not reported by more than one method.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
|------------------|----------------|----------------------------|--------------------------------|
| STP-1 to EP-2 | Antimony | ND | 0.0013 |
| OW-30 | Arsenic | 0.00085 | 0.0011 |
| OW-14 | Arsenic | 0.0023 | 0.0039 |
| STP-1 to EP-2 | Arsenic | 0.0019 | 0.0021 |
| Dup-12-29-22 | Arsenic | 0.00063 | 0.00094 |
| OW-30 | Barium | 0.12 | 0.13 |
| OW-14 | Barium | 2.0 | 2.2 |
| MKTF-41 | Barium | 0.079 | 0.082 |
| OW-30 | Beryllium | ND | 0.0029 |
| OW-14 | Nickel | 0.084 | 0.086 |
| OW-30 | Selenium | 0.0015 | 0.0065 |
| OW-14 | Selenium | ND | 0.0080 |
| MKTF-41 | Selenium | 0.027 | 0.035 |
| MKTF-32 | Selenium | 0.0020 | 0.0044 |
| Dup-12-29-22 | Selenium | ND | 0.0057 |
| STP-1 to EP-2 | Silver | ND | 0.0036 |
| OW-14 | Vanadium | ND | 0.0019 |
| STP-1 to EP-2 | Vanadium | ND | 0.0024 |
| MKTF-41 | Vanadium | 0.015 | 0.016 |

The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

FIELD DUPLICATE SUMMARY

| Client Sample ID: OW-30
Field Duplicate Sample ID: Dup-12-29-22 | | | | |
|--|----------------|---------------------|--------------------|-----------------------------------|
| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
| MTBE | SW8260B | 910 µg/L | 1,000 µg/L | 9.4% |
| Anthracene | SW8270C | 0.26 µg/L | ND (0.30 µg/L) | DL |
| TPH GRO | SW8015 | 0.94 mg/L | 0.99 mg/L | 5.2% |
| TPH DRO | SW8015 | 2.0 mg/L | 2.4 mg/L | 18.2% |
| TPH ORO | SW8015 | 0.11 mg/L | 0.13 mg/L | 16.7% +/-RL |
| Cyanide, Total | E335.4 | 0.00727 mg/L | 0.0155 mg/L | 72.3% |
| Barium, Dissolved | E 200.7 | 0.13 mg/L | 0.012 mg/L | 166.2% |
| Barium, Total | E 200.7 | 0.12 mg/L | 0.13 mg/L | 8.0% |
| Beryllium, Dissolved | E 200.7 | 0.0029 mg/L | ND (0.0020 mg/L) | DL |
| Nickel, Dissolved | E 200.7 | 0.089 mg/L | 0.0070 mg/L | 170.8% +/-RL |
| Nickel, Total | E 200.7 | 0.098 mg/L | 0.10 mg/L | 2.0% |
| Zinc, Total | E 200.7 | ND (0.010 mg/L) | 0.0074 mg/L | DL |
| Arsenic, Dissolved | E200.8 | 0.0011 mg/L | 0.00094 mg/L | 15.7% +/-RL |
| Arsenic, Total | E200.8 | 0.00085 mg/L | 0.00063 mg/L | 29.7% +/-RL |
| Lead, Dissolved | E200.8 | 0.00025 mg/L | 0.00031 mg/L | 21.4% +/-RL |
| Lead, Total | E200.8 | 0.00067 mg/L | 0.00078 mg/L | 15.2% +/-RL |
| Selenium, Dissolved | E200.8 | 0.0065 mg/L | 0.0057 mg/L | 13.1% |
| Selenium, Total | E200.8 | 0.0015 mg/L | ND (0.0010 mg/L) | DL |
| <p>Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.</p> <p>DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).</p> <p>+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.</p> <p>The RPD value for dissolved barium greatly exceeded the data validation limit of 30% at 166.2%. The reported results for dissolved barium were assigned J qualifiers for the parent and field duplicate samples, and J/UJ qualifiers for the results for dissolved barium in the associated samples due to evidence of extremely poor precision (RPD > 100%).</p> <p>The RPD value for total cyanide exceeded the data validation limit of 30% at 72.3%. The total cyanide results for samples OW-30 and Dup-12-29-22 were assigned J qualifiers due to evidence of poor precision.</p> | | | | |

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| EBD | Equipment blank detection |
| EBL | Flagged as estimated by the laboratory. |
| ERPD-FD | High field duplicate RPD. |
| ERPD-LCS | The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision. |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-LCS | The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| MBD | Method blank detection |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |

| Analyte | Method | Field Sample ID | Lab Sample ID | Result | Limit | Units | Reviewer Qualifier | DV Flag Reasons |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee, evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-12-6-22 | 2212303-001 |
| MKTF-46 | 2212303-002 |
| MKTF-18R | 2212303-003 |
| MKTF-16 | 2212303-004 |
| PW-3 | 2212303-005 |
| East LDU | 2212303-006 |
| West LDU | 2212303-007 |
| FB-12-6-22 | 2212303-008 |
| DUP-12-6-22 | 2212303-009 |
| MKTF-38 | 2212303-010 |
| Trip Blank | 2212303-011 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ✓ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 661 data points. The data completeness calculation does not include any submitted blank sample results. Data points were not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformances related to this data set.

Method 8270C and Method 8270C SIM: 1-Methylnaphthalene, 2-methylnaphthalene, and naphthalene were reported by EPA Method 8270 instead of EPA Method 8270 SIM because of their elevated concentrations for sample MKTF-18R

Method 8015D DRO: The method blank had a low-level detection for DRO. Samples with detections are flagged with a "B".

2. Were the data free of data qualification flags and/or notes used by the laboratory? No

If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

B – Analyte detected in the associated method blank.

J – Analyte detected below quantitation limits.

J4 – The associated batch QC was outside the established quality control range for accuracy.

R – %RPD outside of range.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? No

Comments: The CoC record from field to laboratory was not complete, but custody was maintained as evidenced by laboratory personnel signatures, dates, times of receipt, and the CoC confirmation letter (Attachment A). Custody seals were not present nor required on the coolers because the samples were transferred to a Hall Environmental Field Service courier for delivery to the laboratory, and custody was maintained at all times.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| <u>Method</u> | <u>Sample(s)</u> | <u>Analyte(s)</u> | <u>Dilution Factor</u> |
|---------------|------------------------------|-----------------------------------|------------------------|
| 200.7 | MKTF-18R, East LDU, West LDU | Select Total and Dissolved Metals | 5 |
| 200.8 | DUP-12-6-22, MKTF-38 | Select Dissolved Metals | 5 |
| 8260B | MKTF-16 | VOCs | 5 |
| 8260B | MKTF-18R | Select VOCs | 10 |
| 8015D | MKTF-18R | TPH GRO | 10 |
| 8260B | MKTF-18R | Benzene | 100 |

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? No

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.

The CoC requested total and dissolved metals using only Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

VALIDATION CRITERIA CHECKLIST

6. Were samples received in good condition within method-specified requirements?

No

Comments: Samples were received on ice, in good condition, and with the cooler temperatures outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ between 0.2°C and 1.3°C as noted on the Sample Log-in Check List. Samples transferred to Pace National were received in good condition with the cooler temperature within the recommended range at 0.4°C as noted on the CoC.

The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken and/or frozen.

7. Were samples extracted/digested and analyzed within method-specified or technical holding times?

Yes

Comments: The samples were extracted/digested and analyzed within method-specific holding times.

8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil.

Yes

Comments: The results were reported in concentration units of micrograms per liter ($\mu\text{g/L}$) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.

9. Did the laboratory provide any specific initial and/or continuing calibration results?

Yes

Comments: Detailed calibration information was not provided as part of this laboratory report but limited initial calibration summary data were available for Method 4500CN E.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits?

Yes

Comments: The available initial calibration summary data were within the acceptance limits.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method?

Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

12. Were target analytes reported as not detected in the laboratory blanks?

No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

| Method | Analyte | Batch | Concentration |
|--------|--------------------|--------|---------------|
| 200.7 | Dissolved Barium | B93514 | 0.0013 mg/L |
| 200.8 | Dissolved Antimony | A93132 | 0.0012 mg/L |
| 8015D | TPH DRO | 71994 | 0.15 mg/L |

Detections of the identified analytes in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of dissolved barium and TPH DRO in the associated samples that were greater than the reporting limits but less than or equal to 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

VALIDATION CRITERIA CHECKLIST

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| Method | Analytes | Batch | MS Sample Source |
|-----------|-----------------------------|-----------|----------------------|
| 200.7 | Total Metals | 71965 | Not Prepared |
| 200.7 | Dissolved Metals | B93514 | DUP-12-6-22, MKTF-38 |
| 200.8 | Total Metals | 71965 | Not Prepared |
| 200.8 | Dissolved Metals | A93132 | EB-12-6-22, MKTF-46 |
| 200.8 | Dissolved Metals | A93305 | Not Prepared |
| 200.8 | Dissolved Lead | A93335 | MKTF-46 |
| 200.8 | Dissolved Metals | D93335 | Not Prepared |
| 245.1 | Total and Dissolved Mercury | 72127 | East LDU |
| 504.1 | EDB | 71922 | Not Prepared |
| 4500CN E | Cyanide | WG1971426 | Not Associated |
| 8015D | TPH DRO and MRO | 71994 | Not Prepared |
| 8015D | TPH GRO | R93213 | Not Prepared |
| 8260B | VOCs | R93183 | Not Prepared |
| 8260B | VOCs | R93209 | MKTF-38 |
| 8270C SIM | SVOCs | 71974 | Not Prepared |
| 8270C | SVOCs | 71974 | Not Prepared |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The MS/MSD percent recoveries and RPDs for project samples were within data validation and laboratory QC limits.

The percent recoveries and RPD values for MS/MSDs prepared from non-project samples were evaluated and considered, but data were not qualified based on those results since matrix similarity to project samples could not be guaranteed.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

The LCS recovery for cyanide in Method 4500CN E batch WG1971426 (R93762) was outside the acceptance limits of 87.1-120% at 83.8%. Cyanide was not detected in the associated samples, and these results were qualified as UJ due to evidence of potential low bias.

The reported recovery for mercury in the LCS for Method 245.1 batch 72127 was outside the acceptance limits of 70-130% at 134%. Mercury was detected in associated samples and the results were assigned J+ qualifiers due to

VALIDATION CRITERIA CHECKLIST

evidence of potential high bias. The non-detect results for mercury in associated samples did not require qualification based on this LCS non-conformity.

The RPD value for pyrene in the LCS/LCSD analyses for Method 8270C batch 71974 exceeded the laboratory limit of 11.8% at 12.3%. Pyrene was not detected in the associated samples and the results were assigned UJ qualifiers due to evidence of poor precision.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within QC limits, with the following exceptions.

| Method | Surrogate/ EIS | Sample | Surrogate Recovery | QC Limits |
|--------|-----------------------|----------|--------------------|-----------|
| 8015D | BFB | MKTF-16 | 152% | 70-130% |
| 8015D | BFB | East LDU | 206% | 70-130% |
| 8015D | BFB | West LDU | 230% | 70-130% |
| 8015D | BFB | MKTF-38 | 149% | 70-130% |
| 8270C | 2,4,6-Tribromophenol | PW-3 | 12.3% | 15-108% |
| 8270C | Phenol-d ₅ | West LDU | 0% | 15-67% |

TPH GRO was detected in the Method 8015D analyses of samples MKTF-16, East LDU, West LDU, and MKTF-38 and these results were qualified as J+ due to evidence of a potential high bias.

Since Method 8270C and 8270C SIM surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range. This condition did not exist for the Method 8270C analyses of samples PW-3 and West LDU and qualification of sample data was not required.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB-12-6-22, and one equipment blank sample, EB-12-6-22, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| Blank Sample ID | Method | Analyte | Concentration |
|-----------------|--------|---------------------|---------------|
| EB-12-6-22 | 200.7 | Total Chromium | 0.0027 mg/L |
| EB-12-6-22 | 200.7 | Total Cobalt | 0.0050 mg/L |
| EB-12-6-22 | 200.7 | Barium Dissolved | 0.0016 mg/L |
| EB-12-6-22 | 200.7 | Beryllium Dissolved | 0.0010 mg/L |
| EB-12-6-22 | 200.7 | Dissolved Zinc | 0.0072 mg/L |
| EB-12-6-22 | 8015D | TPH DRO | 0.037 mg/L |

Detections of dissolved beryllium and dissolved zinc in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifier. Detections of total cobalt and dissolved zinc in the associated samples that were greater than the reporting limits but less than or equal to 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples

VALIDATION CRITERIA CHECKLIST

and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

The dissolved barium and TPH DRO results for the samples in batches B93514 and 71994, respectively, were previously qualified due to laboratory blank detections; therefore, additional qualification based on the equipment blank detections was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples.

Sample DUP-12-6-22 was collected as a field duplicate of sample MKTF-46.

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? Yes

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples.

22. For laboratory duplicates prepared from project samples, were RPDs within data validation or laboratory QC limits? N/A

Comments: Laboratory duplicates were prepared for the analysis of cyanide in batch WG1971426 from a sample not associated with this data set and sample EB-12-6-22.

The RPD for the laboratory duplicate prepared from a project sample could not be calculated because both measurements were reported as not detected.

The RPD value for the laboratory duplicate sample prepared from a non-project sample was evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? N/A

Comments: Target analytes were not reported by more than one method.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
|------------------|----------------|----------------------------|--------------------------------|
| MKTF-18R | Mercury | ND | 0.00013 |
| PW-3 | Mercury | 0.00010 | 0.00011 |
| East LDU | Mercury | 0.00013 | 0.00014 |
| MKTF-46 | Antimony | ND | 0.00057 |
| MKTF-18R | Antimony | ND | 0.00061 |
| PW-3 | Antimony | ND | 0.00066 |
| MKTF-38 | Antimony | ND | 0.00085 |
| PW-3 | Arsenic | 0.0035 | 0.0038 |

VALIDATION CRITERIA CHECKLIST

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result
(mg/L)</u> | <u>Dissolved Result
(mg/L)</u> |
|------------------|----------------|--------------------------------|------------------------------------|
| West LDU | Arsenic | 0.00059 | 0.00062 |
| EB-12-6-22 | Barium | ND | 0.0016 |
| EB-12-6-22 | Beryllium | ND | 0.0010 |
| East LDU | Beryllium | 0.0012 | 0.0016 |
| West LDU | Beryllium | ND | 0.0010 |
| MKTF-38 | Beryllium | ND | 0.0019 |
| MKTF-38 | Cadmium | ND | 0.0011 |
| MKTF-46 | Selenium | ND | 0.00069 |
| West LDU | Selenium | ND | 0.00048 |
| DUP-12-6-22 | Selenium | ND | 0.00060 |
| MKTF-46 | Silver | 0.0019 | 0.0032 |
| MKTF-18R | Silver | ND | 0.0014 |
| PW-3 | Silver | 0.0033 | 0.0040 |
| DUP-12-6-22 | Silver | 0.0022 | 0.0030 |
| PW-3 | Vanadium | ND | 0.0038 |
| MKTF-38 | Vanadium | ND | 0.0038 |
| EB-12-6-22 | Zinc | ND | 0.0072 |
| MKTF-46 | Zinc | ND | 0.0080 |
| MKTF-18R | Zinc | 0.0066 | 0.19 |
| PW-3 | Zinc | 0.034 | 0.065 |
| East LDU | Zinc | 0.22 | 0.086 |
| West LDU | Zinc | 0.026 | 0.13 |
| DUP-6-22 | Zinc | ND | 0.0044 |
| MKTF-38 | Zinc | ND | 0.016 |

The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

FIELD DUPLICATE SUMMARY

| Client Sample ID: MKTF-46
Field Duplicate Sample ID: DUP-12-6-22 | | | | |
|--|---------|-------------------|-------------------|-----------------------------------|
| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
| Chlorobenzene | SW8260B | ND (1.0 µg/L) | 0.67 µg/L | DL |
| Methylene Chloride | SW8260B | 3.9 µg/L | ND (3.0 µg/L) | DL |

| Mercury, Dissolved | E245.1 | 0.00013 mg/L | ND (0.00020 mg/L) | DL |
| Mercury, Total | E245.1 | 0.00017 mg/L | 0.00014 mg/L | 19.4% +/-RL |
| <p>Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.</p> <p>DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).</p> <p>+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.</p> | | | | |

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| EBD | Equipment blank detection |
| ERPD-LCS | The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision. |
| HR-SUR | The surrogate percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-LCS | The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| MBD | Method blank detection |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |

ATTACHMENT A

CoC Confirmation

02/16/2023

Brittany Nelson
Trihydro Corporation
1252 Commerce Drive
Laramie, WY 82070

Chain of Custody Confirmation

I, Brittany Nelson representing the Marathon Gallup site do confirm the following information inadvertently left off the chain-of-custody (CoC) provided with data set 2212303 or information was not reported accurately in accordance with the field records. In addition, I do confirm that all aqueous samples were provided to the laboratory in the proper, method-referenced, containers and were properly preserved (chemically and physically). The information identified in bold italics will be used to further clarify the CoC documentation.

The required analytical parameters for samples MKTF-38 and Trip Blank were not noted on the CoC.

To the best of my knowledge, the above information is correct.

Brittany Nelson

2-16-23
DATE

This confirmation is an amendment to the chain-of-custody accompanying the Marathon Gallup, Hall Environmental Analysis Laboratory data set 2212303.

Tier II Data Validation Report Summary

| | |
|---|--|
| Client: Marathon Oil | Laboratory: Hall Environmental Analysis Laboratory |
| Project Name: Western Refining Southwest, Quarterly GW | Sample Matrix: Groundwater |
| Project Number: 697-080-002 Task: 0006 | Sample Start Date: 12/07/2022 |
| Date Validated: 02/01/2023 | Sample End Date: 12/07/2022 |
| Parameters Included: <ul style="list-style-type: none"> ▪ Volatile Organic Compounds (VOC) by Environmental Protection Agency (EPA) Test Methods for Evaluating Solid Waste (SW-846) Method 8260B ▪ 1,2-Dibromoethane (EDB) by EPA Method 504.1 ▪ Semivolatile Organic Compounds (SVOC) by SW-846 Method 8270C and Method 8270C with Selected Ion Monitoring (SIM) ▪ Total Petroleum Hydrocarbons (TPH) Gasoline Range Organics (GRO) by SW-846 Method 8015D ▪ TPH Diesel Range Organics (DRO) and Motor Oil Range Organics (MRO) by SW-846 Method 8015D Modified ▪ Total and Dissolved Metals by EPA Method 200.7 and Method 200.8 ▪ Total and Dissolved Mercury by EPA Method 245.1 ▪ Cyanide by Standard Methods for the Examination of Water and Wastewater (SM) Method 4500 CN E ▪ Per- and Polyfluorinated Alkyl Substances (PFAS) by Liquid Chromatography with Tandem Mass Spectrometry (LC-MS/MS) and Isotope Dilution (ID) | |
| Laboratory Project ID: 2212442 | |
| Data Validator: Daran O'Hollearn, Lead Project Scientist | |
| Reviewer: Mike Phillips, Senior Chemist | |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee, and Enthalpy Analytical Laboratory of El Dorado Hills, California, evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD and ongoing precision and recovery (OPR) samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD/OPR percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-12-7-22 | 2212442-001 |
| OW-64 | 2212442-002 |
| OW-12 | 2212442-003 |
| OW-12A | 2212442-004 |
| OW-63 | 2212442-005 |
| OW-57 | 2212442-006 |
| DUP-12-7-22 | 2212442-007 |
| FB-12-7-22 | 2212442-008 |
| EB-OW-67 | 2212442-009 |
| Trip Blank | 2212442-010 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD/OPR (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ✓ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Data review and evaluation was performed following criteria set forth in Data Review and Validation Guidelines for Perfluoroalkyl Substances (PFASs) Analyzed Using EPA Method 537, document number EPA 910-R-18-001, November 2018.
- Data were reviewed and evaluated according to criteria set forth in the Department of Defense (DoD) / Department of Energy (DOE) Quality Systems Manual (QSM) for Environmental Laboratories, Version 5.3, 2019.
- Data were reviewed and evaluated according to criteria set forth in Data Validation Guidelines Module 3: Data Validation Procedure for Per- and Polyfluoroalkyl Substances Analysis by QSM Table B-15, United States Department of Defense, Environmental Data Quality Workgroup, May 2020.

Tier II Data Validation Report Summary

- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| Qualifier | Definition |
|-----------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| J- | The result is an estimated concentration, but may be biased low |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |
| R | Rejected, data not usable |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 564 data points. The data completeness calculation does not include any submitted blank sample results. Six data points were rejected. The data completeness measure for this data package is calculated to be 98.94% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformances related to this data set.

Method 8270C and Method 8270C SIM: 1-Methylnaphthalene, 2-methylnaphthalene, and naphthalene were reported by EPA Method 8270 instead of EPA Method 8270 SIM because of their elevated concentrations for samples OW-57 and OW-63.

Method 8015D DRO: The method blank had a low-level detection for DRO. Samples with detections are flagged with a "B".

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

B – Analyte detected in the associated method blank.

D – Sample diluted due to matrix.

J – Analyte detected below quantitation limits.

P1 – RPD value not applicable for sample concentrations less than 5 times the reporting limit.

R – %RPD outside of range.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? No

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. The laboratory noted that the shipping containers were sealed, and custody seals were present and intact on the shipping containers.

The correct parameters were not marked on the CoC for the trip blank sample that was received by the laboratory. The laboratory logged in the sample and performed the appropriate volatile analysis. Validation action was not required.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| <u>Method</u> | <u>Sample(s)</u> | <u>Analyte(s)</u> | <u>Dilution Factor</u> |
|---------------|----------------------|-----------------------------------|------------------------|
| 8260B | DUP-12-7-22 | VOCs | 2 |
| 200.7 | OW-63 | Total and Dissolved Barium | 5 |
| 200.7 | OW-57 | Dissolved Barium | 5 |
| 200.8 | Multiple Samples | Select Total and Dissolved Metals | 5 |
| 8260B | OW-12A | Select VOCs | 5 |
| 8260B | OW-12 | Benzene | 10 |
| 8015D | OW-12A, OW-57 | TPH DRO and MRO | 10 |
| 8015D | OW-12A, OW-63, OW-57 | TPH GRO | 50 |
| 8260B | OW-12A | Select VOCs | 50 |
| 8260B | OW-63, OW-57 | Select VOCs | 50 |
| 200.7 | OW-57 | Total Barium | 100 |
| 8260B | OW-63, OW-57 | Benzene | 500 |

| VALIDATION CRITERIA CHECKLIST | |
|--|-----|
| 5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? | No |
| <p>Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.</p> <p>The CoC requested total and dissolved metals using only Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> <p>The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> | |
| 6. Were samples received in good condition within method-specified requirements? | No |
| <p>Comments: Samples were received on ice, in good condition, and with the cooler temperatures outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ between 0.4°C and 1.1°C as noted on the Sample Log-in Check List. Samples transferred to Pace National were received in good condition with the cooler temperature within the recommended range at 5.5°C as noted on the CoC. Samples transferred to Enthalpy Analytical Laboratory were received in good condition with the cooler temperature outside the recommended range at 0.8°C as noted on the CoC and the Sample Login Checklist.</p> <p>The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken and/or frozen.</p> | |
| 7. Were samples extracted/digested and analyzed within method-specified or technical holding times? | Yes |
| <p>Comments: The samples were extracted/digested and analyzed within method-specific holding times.</p> | |
| 8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. | Yes |
| <p>Comments: The results were reported in concentration units of nanograms per liter (ng/L), micrograms per liter ($\mu\text{g/L}$), and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.</p> | |
| 9. Did the laboratory provide any specific initial and/or continuing calibration results? | No |
| <p>Comments: Initial and continuing calibration data were not included as part of this data set.</p> | |
| 10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? | N/A |
| <p>Comments: Initial and continuing calibration data were not included as part of this data set.</p> | |
| 11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | Yes |
| <p>Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.</p> | |

VALIDATION CRITERIA CHECKLIST

12. Were target analytes reported as not detected in the laboratory blanks? No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

| Method | Analyte | Batch | Concentration |
|--------|------------------|--------|---------------|
| 200.7 | Total Cobalt | 71980 | 0.0048 mg/L |
| 200.7 | Dissolved Barium | B93514 | 0.0013 mg/L |
| 8015D | TPH DRO | 71994 | 0.15 mg/L |
| 8015D | TPH DRO | 72049 | 0.080 mg/L |

Detections of TPH DRO in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of total cobalt and TPH DRO in the associated samples that were greater than the reporting limits but less than or equal to 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| Method | Analytes | Batch | MS Sample Source |
|-------------|-----------------------------|-----------|-------------------|
| 200.7 | Total Metals | 71980 | EB-12-7-22, OW-64 |
| 200.7 | Dissolved Metals | B93514 | Not Prepared |
| 200.8 | Total Metals | 71980 | Not Prepared |
| 200.8 | Dissolved Metals | A93335 | EB-12-7-22 |
| 200.8 | Dissolved Metals | A93438 | Not Prepared |
| 200.8 | Dissolved Antimony | A93556 | Not Prepared |
| 245.1 | Total and Dissolved Mercury | 72128 | OW-12 |
| 245.1 | Total Mercury | 72200 | Not Prepared |
| 504.1 | EDB | 72189 | Not Prepared |
| PFAS Method | PFAs | B22L133 | Not Prepared |
| 4500CN E | Cyanide | WG1974296 | EB-12-7-22 |
| 8015D | TPH DRO and MRO | 71994 | Not Prepared |
| 8015D | TPH DRO and MRO | 72049 | Not Prepared |
| 8015D | TPH GRO | R93213 | Not Prepared |
| 8260B | VOCs | R93331 | Not Prepared |
| 8260B | VOCs | R93377 | Not Prepared |
| 8260B | VOCs | R93479 | Not Prepared |
| 8270C SIM | SVOCs | 71974 | Not Prepared |
| 8270C | SVOCs | 71974 | Not Prepared |
| 8270C SIM | SVOCs | 72036 | Not Prepared |
| 8270C | SVOCs | 72036 | Not Prepared |
| 8270C SIM | SVOCs | R93333 | Not Prepared |

Not Prepared – Matrix spikes were not prepared/reported for this batch.

VALIDATION CRITERIA CHECKLIST

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The percent recoveries and RPDs for MS/MSDs prepared from project samples were within data validation and laboratory QC limits.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS and OPR samples analyzed was equal to at least 5% of the total number of samples.

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS, LCSD and OPR percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits | LCS/LCSD RPD | RPD QC Limits |
|-----------|---------------------|--------|--------------|---------------|--------------------|--------------|---------------|
| 200.7 | Total Cobalt | 71980 | 57.1% | ----- | 70-130% | ----- | ----- |
| 200.8 | Total Antimony | 71980 | 69.4% | ----- | 70-130% | ----- | ----- |
| 200.8 | Dissolved Selenium | A93335 | 214% | ----- | 70-130% | ----- | ----- |
| 8015D | TPH DRO | 72049 | Acceptable | Acceptable | 31.2-125% | 22.7% | 20% |
| 8270C | Pyrene | 71974 | Acceptable | Acceptable | 61-123% | 12.3% | 11.8% |
| 8270C | Pyrene | 72036 | Acceptable | Acceptable | 61-123% | 17.9% | 11.8% |
| 8270C SIM | Naphthalene | 72036 | Acceptable | Acceptable | 15-78.3% | 33.3% | 31.7% |
| 8270C SIM | 1-Methylnaphthalene | 72036 | Acceptable | Acceptable | 15-79.6% | 40.0% | 31.4% |
| 8270C SIM | 2-Methylnaphthalene | 72036 | Acceptable | Acceptable | 15-78.6% | 39.1% | 30.5% |
| 8270C SIM | Acenaphthene | 72036 | Acceptable | Acceptable | 15-92% | 37.8% | 30.5% |
| 8270C SIM | Fluorene | 72036 | Acceptable | Acceptable | 15-96% | 31.4% | 25.1% |

Detections of total cobalt in the associated samples were qualified as J-, and non-detections of total cobalt and total antimony were qualified UJ due to evidence of potential low bias.

The detection of dissolved selenium in sample OW-12A was qualified as J+ due to evidence of potential high bias. Non-detections of dissolved selenium in the associated samples did not require qualification.

The analytes with LCS/LCSD RPD values that were above the QC limit were qualified as J for detections and UJ for non-detections for the associated samples due to evidence of poor precision.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate/extracted internal standard (EIS) recoveries were within QC limits, with the following exceptions.

| Method | Surrogate/ EIS | Sample | Surrogate Recovery | QC Limits |
|--------|------------------------------------|-------------|--------------------|-----------|
| 8015D | BFB | OW-64 | 184% | 70-130% |
| 8015D | BFB | OW-12A | 143% | 70-130% |
| 8270C | 2-Fluorophenol | OW-12A | 0% | 15-84.5% |
| 8270C | Phenol-d ₅ | OW-12A | 0% | 15-67% |
| 8015D | BFB | DUP-12-7-22 | 188% | 70-130% |
| 537 | ¹³ C ₃ PFBA | OW-63 | 35.9% | 50-150% |
| 537 | ¹³ C ₈ PFOSA | OW-63 | 42.2% | 50-150% |
| 537 | ¹³ C ₈ PFOSA | EB-OW-67 | 30.2% | 50-150% |

VALIDATION CRITERIA CHECKLIST

TPH GRO was detected in the Method 8015D analyses of samples OW-64, OW-12A, and DUP-12-7-22, and these results were assigned J+ qualifiers due to evidence of potential high bias.

Since Method 8270C and 8270C SIM surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range.

Since at least 2 of 3 surrogates were recovered below 10%, the associated analytes that were not detected in the acid fraction of sample OW-12A were qualified as R to indicate rejected (not usable) data based on evidence of extreme low bias. The analyte 2,4-dimethylphenol was detected in sample OW-12A, and this result was qualified as J- due to evidence of potential low bias.

PFBA and PFOSA associated with EIS ¹³C₃ PFBA and ¹³C₈ PFOSA recoveries between 20% and 50% were qualified as J+ for detections and UJ for non-detections due to the non-conforming EIS recoveries.

The TPH DRO and TPH MRO results for samples OW-12A and OW-57 were not qualified based on the surrogate non-conformances in the Method 8015D analyses since the applied dilution of 10 times resulted in surrogate concentrations below routinely calibrated levels, and those results were deemed unreliable and possibly inaccurate.

Qualification of sample data was not required based on surrogate/EIS non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB-12-7-22, and two equipment blank samples, EB-12-7-22 and EB-OW-67, were collected as part of this sample set.

19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? No

Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exceptions.

| <u>Blank Sample ID</u> | <u>Method</u> | <u>Analyte</u> | <u>Concentration</u> |
|------------------------|---------------|----------------|----------------------|
| EB-12-7-22 | 200.7 | Dissolved Zinc | 0.0065 mg/L |
| EB-12-7-22 | 245.1 | Total Mercury | 0.000095 mg/L |
| EB-12-7-22 | 8015D | TPH DRO | 0.035 mg/L |

Detections of dissolved zinc and total mercury in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of dissolved zinc and total mercury in the associated samples that were greater than the reporting limits but less than or equal to 10 times the blank results were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples did not require qualification.

The TPH DRO results for the samples in batches 71994 and 72049 were previously qualified due to a laboratory blank detection; therefore, additional qualification due to the equipment blank contamination was not required.

20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of field duplicates collected was equal to at least 10% of the number of samples.

Sample DUP-12-7-22 was collected as a field duplicate of sample OW-64.

VALIDATION CRITERIA CHECKLIST

21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? Yes

Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples.

22. For laboratory duplicates prepared from project samples, were RPDs within data validation or laboratory QC limits? N/A

Comments: Laboratory duplicates were prepared for the analysis of cyanide in batch WG1974296 from a sample not associated with this data set and sample OW-12A.

The RPD for the laboratory duplicate prepared from a project sample could not be calculated because both measurements were reported as not detected.

The RPD value for the laboratory duplicate sample prepared from a non-project sample was evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed.

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? N/A

Comments: Target analytes were not reported by more than one method.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
|------------------|----------------|----------------------------|--------------------------------|
| OW-12A | Antimony | ND | 0.0010 |
| OW-57 | Antimony | ND | 0.0023 |
| OW-64 | Arsenic | 0.0022 | 0.0025 |
| OW-12 | Arsenic | 0.0015 | 0.0018 |
| OW-12 | Barium | 0.019 | 0.020 |
| OW-12 | Lead | ND | 0.000071 |
| OW-12A | Nickel | ND | 0.0055 |
| OW-12A | Selenium | 0.0016 | 0.0020 |
| OW-12A | Silver | ND | 0.0020 |
| OW-57 | Silver | ND | 0.0016 |
| OW-12 | Vanadium | 0.012 | 0.013 |
| EB-12-7-22 | Zinc | ND | 0.0065 |
| OW-12 | Zinc | ND | 0.011 |
| OW-12A | Zinc | 0.0056 | 0.0080 |
| OW-63 | Zinc | ND | 0.0093 |
| DUP-12-7-22 | Zinc | ND | 0.016 |

The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

FIELD DUPLICATE SUMMARY

| Client Sample ID: OW-64
Field Duplicate Sample ID: DUP-12-7-22 | | | | |
|--|---------|-------------------|------------------|-----------------------------------|
| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
| Barium, Dissolved | E 200.7 | 0.29 mg/L | 0.30 mg/L | 3.4% |
| Barium, Total | E 200.7 | 0.30 mg/L | 0.31 mg/L | 3.3% |
| Vanadium, Dissolved | E 200.7 | 0.0048 mg/L | 0.0052 mg/L | 8.0% +/-RL |
| Vanadium, Total | E 200.7 | 0.0058 mg/L | 0.0056 mg/L | 3.5% +/-RL |
| Zinc, Dissolved | E 200.7 | ND (0.010 mg/L) | 0.016 mg/L | DL |
| Arsenic, Dissolved | E200.8 | 0.0025 mg/L | 0.0019 mg/L | 27.3% |
| Arsenic, Total | E200.8 | 0.0022 mg/L | 0.0022 mg/L | 0.0% |
| Lead, Dissolved | E200.8 | 0.000087 mg/L | 0.000060 mg/L | 36.7% +/-RL |

| <p>Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.</p> <p>DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).</p> <p>+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.</p> | | | | |

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| EBD | Equipment blank detection |
| ERPD-LCS | The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision. |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| HR-SUR | The surrogate percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-EIS | The extracted internal standard (EIS) recovery was less than the lower acceptance limit. |
| LR-LCS | The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| LR-SUR | The surrogate percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| MBD | Method blank detection |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |

Tier II Data Validation Report Summary

| | |
|---|--|
| Client: Marathon Oil | Laboratory: Hall Environmental Analysis Laboratory |
| Project Name: Western Refining Southwest, Quarterly GW | Sample Matrix: Groundwater |
| Project Number: 697-080-002 Task: 0006 | Sample Start Date: 12/08/2022 |
| Date Validated: 01/30/2023 | Sample End Date: 12/08/2022 |
| Parameters Included: <ul style="list-style-type: none"> ▪ Volatile Organic Compounds (VOC) by Environmental Protection Agency (EPA) Test Methods for Evaluating Solid Waste (SW-846) Method 8260B ▪ 1,2-Dibromoethane (EDB) by EPA Method 504.1 ▪ Semivolatile Organic Compounds (SVOC) by SW-846 Method 8270C and Method 8270C with Selected Ion Monitoring (SIM) ▪ Total Petroleum Hydrocarbons (TPH) Gasoline Range Organics (GRO) by SW-846 Method 8015D ▪ TPH Diesel Range Organics (DRO) and Motor Oil Range Organics (MRO) by SW-846 Method 8015D Modified ▪ Total and Dissolved Metals by EPA Method 200.7 and Method 200.8 ▪ Total and Dissolved Mercury by EPA Method 245.1 ▪ Cyanide by Standard Methods for the Examination of Water and Wastewater (SM) Method 4500 CN E | |
| Laboratory Project ID: 2212630 | |
| Data Validator: Daran O'Hollearn, Lead Project Scientist | |
| Reviewer: Charles Ballek, Senior Chemist | |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Trip blanks
- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-12-8-22 | 2212630-001 |
| MKTF-40 | 2212630-002 |
| MKTF-31 | 2212630-003 |
| MKTF-27 | 2212630-004 |
| MKTF-28 | 2212630-005 |
| MKTF-29 | 2212630-006 |
| DUP 12-8-22 | 2212630-007 |
| FB-12-8-22 | 2212630-008 |
| Trip Blank | 2212630-009 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ✓ Field, Equipment, and Trip Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |
| R | Rejected, data not usable |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 540 data points. The data completeness calculation does not include any submitted blank sample results. Fourteen data points were rejected. The data completeness measure for this data package is calculated to be 97.41% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformances related to this data set.

Method 8015D DRO/MRO: The method blank had a low-level detection for DRO. Samples with detections are flagged with a "B".

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

B – Analyte detected in the associated method blank.

J – Analyte detected below quantitation limits.

P1 – RPD value not applicable for sample concentrations less than 5 times the reporting limit.

R – % RPD outside of range.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present because the samples were transferred to a laboratory field courier service for transport from the field to the laboratory, and custody was maintained at all times.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| <u>Method</u> | <u>Sample(s)</u> | <u>Analyte(s)</u> | <u>Dilution Factor</u> |
|---------------|------------------|-----------------------------------|------------------------|
| 8260B | MKTF-31 | Select VOCs | 2 |
| 200.8 | Multiple Samples | Select Total and Dissolved Metals | 5 |
| 8270C | MKTF-31 | 1,4-Dioxane | 10 |
| 8260B | MKTF-31 | MTBE | 20 |
| 200.8 | MKTF-28 | Dissolved Selenium | 50 |

Dissolved selenium was not detected in sample MKTF-28 at a dilution of 50 times. The sample was analyzed for the remaining dissolved metals at no dilution and a dilution of 5. The laboratory did not specify the reason for reporting dissolved selenium from this dilution rather than analyses performed at lower dilutions with lower detection limits.

5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? No

Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.

The CoC requested total and dissolved metals using only Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.

VALIDATION CRITERIA CHECKLIST

6. Were samples received in good condition within method-specified requirements?

No

Comments: Samples were received on ice, in good condition, and with the cooler temperatures both within and outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ at 1.5°C , 2.1°C , and 5.0°C as noted on the CoC and Sample Log-in Check List. Samples transferred to Pace National were received in good condition with the cooler temperature outside the recommended range at 0.6°C as noted on the CoC.

The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen.

7. Were samples extracted/digested and analyzed within method-specified or technical holding times?

Yes

Comments: The samples were extracted/digested and analyzed within method-specific holding times.

8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil.

Yes

Comments: The results were reported in concentration units of micrograms per liter ($\mu\text{g/L}$) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested.

9. Did the laboratory provide any specific initial and/or continuing calibration results?

No

Comments: Initial and continuing calibration data were not included as part of this data set.

10. If initial and/or continuing calibration results were provided, were the results within acceptable limits?

N/A

Comments: Initial and continuing calibration data were not included as part of this data set.

11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method?

Yes

Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples.

12. Were target analytes reported as not detected in the laboratory blanks?

No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

| Method | Analyte | Batch | Concentration |
|--------|--------------------|--------|---------------|
| 200.7 | Total Cadmium | 72026 | 0.016 mg/L |
| 200.7 | Dissolved Barium | B93514 | 0.0013 mg/L |
| 200.8 | Total Antimony | 72026 | 0.00052 mg/L |
| 200.8 | Dissolved Antimony | D93335 | 0.00050 mg/L |
| 8015D | TPH DRO | 72049 | 0.080 mg/L |

Detections of TPH DRO in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of TPH DRO in the associated samples that were greater than the reporting limits but less than or equal to 10 times the blank results were assigned JB qualifiers.

Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

VALIDATION CRITERIA CHECKLIST

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| <u>Method</u> | <u>Analytes</u> | <u>Batch</u> | <u>MS Sample Source</u> |
|---------------|-----------------------------|--------------|-------------------------|
| 200.7 | Total Metals | 72026 | EB-12-8-22, MKTF-40 |
| 200.7 | Dissolved Metals | B93514 | Not Prepared |
| 200.7 | Dissolved Metals | B93558 | Not Prepared |
| 200.8 | Total Metals | 72026 | Not Prepared |
| 200.8 | Dissolved Metals | A93438 | Not Prepared |
| 200.8 | Dissolved Metals | D93335 | EB-12-8-22 |
| 245.1 | Total and Dissolved Mercury | 72201 | DUP 12-8-22 |
| 504.1 | EDB | 72190 | Not Prepared |
| 4500CN E | Cyanide | WG1974296 | Not Associated |
| 8015D | TPH DRO and MRO | 72049 | Not Prepared |
| 8015D | TPH GRO | A93392 | MKTF-40 |
| 8260B | VOCs | R93394 | Not Prepared |
| 8270C SIM | SVOCs | 72036 | Not Prepared |
| 8270C | SVOCs | 72036 | Not Prepared |

Not Associated – The MS sample source was not associated with this project.

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? Yes

Comments: The percent recoveries and RPDs for MS/MSDs prepared from project samples were within data validation and laboratory QC limits.

The percent recoveries and RPD values for MS/MSDs prepared from non-project samples were evaluated and considered but data were not qualified based on those results since matrix similarity to project samples could not be guaranteed.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

VALIDATION CRITERIA CHECKLIST

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits?

No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits | LCS/LCSD RPD | RPD QC Limits |
|-----------|---------------------|--------|--------------|---------------|--------------------|--------------|---------------|
| 200.7 | Total Barium | 72026 | 135% | ----- | 70-130% | ----- | ----- |
| 200.7 | Total Chromium | 72026 | 142% | ----- | 70-130% | ----- | ----- |
| 200.7 | Total Zinc | 72026 | 146% | ----- | 70-130% | ----- | ----- |
| 200.7 | Total Cadmium | 72026 | 484% | ----- | 70-130% | ----- | ----- |
| 200.7 | Dissolved Chromium | B93558 | 65.3% | ----- | 70-130% | ----- | ----- |
| 200.8 | Total Antimony | 72026 | 51.2% | ----- | 70-130% | ----- | ----- |
| 200.8 | Total Selenium | 72026 | 135% | ----- | 70-130% | ----- | ----- |
| 245.1 | Mercury | 72201 | 131% | ----- | 70-130% | ----- | ----- |
| 8015D | TPH DRO | 72049 | Acceptable | Acceptable | 31.2-125% | 22.7% | 20% |
| 8270C | Pyrene | 72036 | Acceptable | Acceptable | 61-123% | 17.9% | 11.8% |
| 8270C SIM | Naphthalene | 72036 | Acceptable | Acceptable | 15-78.3% | 33.3% | 31.7% |
| 8270C SIM | 1-Methylnaphthalene | 72036 | Acceptable | Acceptable | 15-79.6% | 40.0% | 31.4% |
| 8270C SIM | 2-Methylnaphthalene | 72036 | Acceptable | Acceptable | 15-78.6% | 39.1% | 30.5% |
| 8270C SIM | Acenaphthene | 72036 | Acceptable | Acceptable | 15-92% | 37.8% | 30.5% |
| 8270C SIM | Fluorene | 72036 | Acceptable | Acceptable | 15-96% | 31.4% | 25.1% |

Detections of the identified analytes with LCS recoveries above the QC limits were qualified as J+ in the associated samples due to evidence of potential high bias. Non-detection of these analytes in the associated samples did not require qualification.

Dissolved chromium and total antimony were not detected in the associated samples and the results were qualified as UJ due to evidence of potential low bias.

The results for analytes with LCS/LCSD RPD values that exceeded the QC limits were qualified as J for detections and UJ for non-detections for the associated samples due to evidence of poor precision.

17. Were surrogate recoveries within laboratory QC limits?

No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

| Method | Surrogate | Sample | Surrogate Recovery | QC Limits |
|--------|-----------------------|-------------|--------------------|-----------|
| 8270C | 2-Fluorophenol | MKTF-29 | 1.92% | 15-84.5% |
| 8270C | Phenol-d ₅ | MKTF-29 | 9.84% | 15-67% |
| 8270C | 2,4,6-Tribromophenol | MKTF-29 | 1.62% | 15-108% |
| 8270C | 2-Fluorophenol | DUP 12-8-22 | 9.97% | 15-84.5% |
| 8270C | 2,4,6-Tribromophenol | DUP 12-8-22 | 2.06% | 15-108% |

Since Method 8270C surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range.

The analytes in the acid fraction of samples MKTF-29 and DUP 12-8-22 were not detected. Since the recoveries for at least 2 of 3 surrogates in samples MKTF-29 and DUP 12-8-22 were less than 10%, these results were qualified as R to indicate rejected (not usable) data based on evidence of extreme low bias.

| VALIDATION CRITERIA CHECKLIST | |
|---|-----|
| Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries. | |
| 18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? | Yes |
| Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One trip blank sample, Trip Blank, one field blank sample, FB-12-8-22, and one equipment blank sample, EB-12-8-22, were collected as part of this sample set. | |
| 19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? | No |
| Comments: Target analytes were not detected in the trip blank, field blank, and equipment blank samples with the following exception.

TPH DRO was detected in the Method 8015D analysis of equipment blank sample EB-12-8-22 at 0.045 mg/L. The TPH DRO results in Method 8015D batch 72049 were previously qualified due to a laboratory blank detection; therefore, additional qualification due to the equipment blank contamination was not required. | |
| 20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? | Yes |
| Comments: The number of field duplicates collected was equal to at least 10% of the number of samples.
Sample DUP 12-8-22 was collected as a field duplicate of sample MKTF-40. | |
| 21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? | No |
| Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exceptions.

RPD values for dissolved barium and total cyanide exceeded the data validation limit of 30% at 30.8% and 34.9%, respectively. The dissolved barium and total cyanide results for samples MKTF-40 and DUP-12-8-22 were assigned J qualifiers due to evidence of poor precision. | |
| 22. For laboratory duplicates prepared from project samples, were RPDs within data validation or laboratory QC limits? | N/A |
| Comments: Laboratory duplicates were prepared for the analysis of cyanide in batch WG1974296 from samples not associated with this data set.

The RPD values for the laboratory duplicate samples prepared from non-project samples were evaluated and considered, but data were not qualified based on these results since matrix similarity to project samples could not be guaranteed. | |

VALIDATION CRITERIA CHECKLIST

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? Yes

Comments: Target analytes were not reported by more than one method.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
|------------------|----------------|----------------------------|--------------------------------|
| MKTF-40 | Arsenic | ND | 0.0010 |
| MKTF-28 | Arsenic | 0.0034 | 0.055 |
| MKTF-27 | Selenium | ND | 0.0031 |
| MKTF-29 | Selenium | ND | 0.0027 |
| DUP 12-8-22 | Selenium | ND | 0.0026 |
| MKTF-31 | Silver | ND | 0.0016 |
| MKTF-28 | Silver | ND | 0.0020 |
| MKTF-40 | Zinc | 0.0051 | 0.011 |

The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

FIELD DUPLICATE SUMMARY

| Client Sample ID: MKTF-40
Field Duplicate Sample ID: DUP-12-8-22 | | | | |
|--|----------------|--------------------|---------------------|-----------------------------------|
| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
| Barium, Dissolved | E 200.7 | 0.045 mg/L | 0.033 mg/L | 30.8% |
| Barium, Total | E 200.7 | 0.10 mg/L | 0.098 mg/L | 2.0% |
| Beryllium, Total | E 200.7 | 0.0010 mg/L | ND (0.0020 mg/L) | DL |
| Chromium, Total | E 200.7 | 0.0034 mg/L | ND (0.0060 mg/L) | DL |
| Nickel, Dissolved | E 200.7 | 0.0096 mg/L | 0.0078 mg/L | 20.7% +/-RL |
| Nickel, Total | E 200.7 | 0.011 mg/L | 0.012 mg/L | 8.7% +/-RL |
| Silver, Dissolved | E 200.7 | 0.0070 mg/L | 0.0031 mg/L | 77.2% +/-RL |
| Silver, Total | E 200.7 | 0.0082 mg/L | 0.0083 mg/L | 1.2% +/-RL |
| Vanadium, Dissolved | E 200.7 | 0.0097 mg/L | 0.0075 mg/L | 25.6% +/-RL |
| Vanadium, Total | E 200.7 | 0.016 mg/L | 0.015 mg/L | 6.5% +/-RL |
| Zinc, Dissolved | E 200.7 | 0.011 mg/L | ND (0.010 mg/L) | DL |
| Zinc, Total | E 200.7 | 0.0051 mg/L | ND (0.010 mg/L) | DL |
| Arsenic, Dissolved | E200.8 | 0.0010 mg/L | 0.00069 mg/L | 36.7% +/-RL |
| Arsenic, Total | E200.8 | ND (0.0050 mg/L) | 0.0014 mg/L | DL |
| Lead, Total | E200.8 | 0.0019 mg/L | 0.0018 mg/L | 5.4% +/-RL |
| Selenium, Dissolved | E200.8 | ND (0.0050 mg/L) | 0.0026 mg/L | DL |
| Selenium, Total | E200.8 | 0.0052 mg/L | ND (0.0050 mg/L) | DL |
| Cyanide, Total | E335.4 | 0.0115 mg/L | 0.00808 mg/L | 34.9% |
| TPH DRO | SW8015D | 0.067 mg/L | 0.044 mg/L | 41.4% +/-RL |
| 1,1-Dichloroethane | SW8260B | 1.0 µg/L | 1.0 µg/L | 0.0% +/-RL |
| 1,4-Dioxane | SW8270C | 12 µg/L | 11 µg/L | 8.7% |
| <p>Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.</p> <p>DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).</p> <p>+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.</p> <p>RPD values for dissolved barium and total cyanide exceeded the data validation limit of 30% at 30.8% and 34.9%, respectively, which was evidence of poor precision. The dissolved barium and total cyanide results were qualified as J for samples MKTF-40 and DUP-12-8-22.</p> | | | | |

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| ERPD-FD | High field duplicate RPD. |
| ERPD-LCS | The LCS/LCSD RPD exceeded the upper acceptable limit indicating poor precision. |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-LCS | The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| LR-SUR | The surrogate percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| MBD | Method blank detection |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |

| Analyte | Method | Field Sample ID | Lab Sample ID | Result | Limit | Units | Reviewer Qualifier | DV Flag Reasons |
|-----------------------|---------|-----------------|---------------|--------|-------|-------|--------------------|-----------------|

| Reviewer: Mike Phillips, Senior Chemist | |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, with additional data from Pace Analytical National of Mount Juliet, Tennessee evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Precision, accuracy, method compliance, and completeness of this data package were assessed during this data review. Precision was determined by evaluating the calculated relative percent difference (RPD) values from:

- Field duplicate pairs
- Laboratory duplicate pairs
- Matrix spike (MS) and matrix spike duplicate (MSD) pairs
- Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) pairs

Laboratory accuracy was established by reviewing the demonstrated percent recoveries (%R) of the following items to verify that data are not biased.

- MS/MSD samples
- LCS/LCSD samples
- Organic system monitoring compounds (surrogates)

Tier II Data Validation Report Summary

Field accuracy was established by collecting and analyzing the following samples to monitor for possible ambient or cross contamination during sampling and transportation.

- Field blanks
- Equipment blanks

Method compliance was established by reviewing sample integrity, holding times, detection limits, surrogate recoveries, laboratory blanks, initial and continuing calibrations (where applicable), and the LCS/LCSD percent recoveries against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| EB-12-14-22 | 2212913-001 |
| OW-58 | 2212913-002 |
| OW-70 | 2212913-003 |
| NAPI-2 | 2212913-004 |
| NAPI-3 | 2212913-005 |
| KA-3 | 2212913-006 |
| FB-12-14-22 | 2212913-007 |
| DUP-12-14-22 | 2212913-008 |

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ✓ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- ⊗ Laboratory Blanks (Items 11 and 12)
- ✓ MS/MSD (Items 13 and 14)
- ⊗ LCS/LCSD (Items 15 and 16)
- ⊗ System Monitoring Compounds (i.e., Surrogates) (Item 17)
- ⊗ Field and Equipment Blanks (Items 18 and 19)
- ⊗ Field Duplicates (Items 20 and 21)
- ✓ Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Data for inorganic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Inorganic Superfund Methods Data Review, document number EPA-540-R-20-006, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Inorganic Data Review, document number EPA 540-R-04-004, October 2004.
- Review of field duplicates was conducted according to the USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|--|
| J | Estimated concentration |
| J+ | The result is an estimated concentration, but may be biased high |
| J- | The result is an estimated concentration, but may be biased low |
| UJ | Estimated reporting limit |
| U | Evaluated to be undetected at the reporting limit |
| JB | Estimated concentration due to blank contamination |
| R | Rejected, data not usable |

Data Completeness

The analyses were performed as requested on the CoC records. The associated samples were received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 540 data points. The data completeness calculation does not include any submitted blank sample results. Seven data points were rejected. The data completeness measure for this data package is calculated to be 98.70% and is acceptable.

VALIDATION CRITERIA CHECKLIST

1. Was the report free of non-conformances identified by the laboratory? No

Comments: The laboratory noted the following analytical non-conformances related to this data set.

Method 80156D DRO/MRO: The method blank had a low-level detection for DRO. Samples with detections are flagged with a "B".

Methods 8270C and 8270C SIM: 1-Methylnaphthalene, 2-methylnaphthalene, and naphthalene were reported by EPA Method 8270 instead of EPA Method 8270 SIM because of their elevated concentrations for samples OW-58 and DUP-12-14-22.

1-Methylnaphthalene was reported by EPA Method 8270 instead of EPA Method 8270 SIM because of its elevated concentration for sample NAPI-2.

2. Were the data free of data qualification flags and/or notes used by the laboratory? No
If no, define.

Comments: The laboratory used the following data qualification flags with this data set.

B – Analyte detected in the associated method blank.

D – Sample diluted due to matrix.

J – Analyte detected below quantitation limits.

J6 – The sample matrix interfered with the ability to make any accurate determination; spike value is low.

S – % Recovery outside of range due to dilution or matrix interference.

* – Value exceeds maximum contaminant level.

3. Were sample CoC forms and custody procedures complete? Yes

Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present because the samples were transferred to a laboratory field courier service for transport from the field to the laboratory, and custody was maintained at all times.

4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? Yes

Comments: The detection limits appeared to be acceptable. The following dilutions were applied.

| <u>Method</u> | <u>Sample(s)</u> | <u>Analyte(s)</u> | <u>Dilution Factor</u> |
|---------------|---------------------|-------------------------------|------------------------|
| 8260B | NAPI-2 | Select VOCs | 2 |
| 200.7 | Multiple Samples | Total and/or Dissolved Barium | 5 |
| 200.8 | Multiple Samples | Dissolved Metals | 5 |
| 8015D | OW-58, DUP-12-14-22 | TPH DRO and MRO | 5 |
| 200.7 | OW-58, DUP-12-14-22 | Total and/or Dissolved Barium | 10 |
| 8015D | NAPI-2 | TPH GRO | 10 |
| 8260B | NAPI-2 | Benzene, Ethylbenzene | 20 |
| 8015D | OW-58, DUP-12-14-22 | TPH GRO | 50 |
| 8260B | OW-58, DUP-12-14-22 | Select VOCs | 50 |
| 8260B | OW-58, DUP-12-14-22 | Benzene | 500 |

| VALIDATION CRITERIA CHECKLIST | |
|--|-----|
| 5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? | No |
| <p>Comments: The reported analytical methods were in compliance with the CoC, and the laboratory reported the requested constituents in accordance with the CoC, with the following exceptions.</p> <p>The CoC requested total and dissolved metals using only Method 200.7; however, the laboratory analyzed the samples using both Method 200.7 and Method 200.8. This substituted analytical method, Method 200.8, met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> <p>The CoC requested cyanide using Method 335.4; however, the laboratory analyzed the samples using Method 4500 CN E. This substituted analytical method met similar sensitivity, accuracy, and precision goals and, therefore, was an acceptable replacement.</p> | |
| 6. Were samples received in good condition within method-specified requirements? | No |
| <p>Comments: Samples were received on ice, in good condition, and with the cooler temperatures outside the recommended temperature range of $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$ between -3.5°C and 0.7°C as noted on the CoC and Sample Log-in Check List. Samples transferred to Pace National were received in good condition with the cooler temperature within the recommended range at 4.6°C as noted on the CoC.</p> <p>The cooler temperatures below 2.0°C were judged as acceptable since the laboratory did not report the sample containers as broken or frozen.</p> | |
| 7. Were samples extracted/digested and analyzed within method-specified or technical holding times? | Yes |
| Comments: The samples were extracted/digested and analyzed within method-specific holding times. | |
| 8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. | Yes |
| Comments: The results were reported in concentration units of micrograms per liter ($\mu\text{g/L}$) and milligrams per liter (mg/L), which were acceptable for the sample matrix and the analyses requested. | |
| 9. Did the laboratory provide any specific initial and/or continuing calibration results? | No |
| Comments: Initial and continuing calibration data were not included as part of this data set. | |
| 10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? | N/A |
| Comments: Initial and continuing calibration data were not included as part of this data set. | |
| 11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | Yes |
| Comments: The total number of laboratory blank samples prepared was equal to at least 5% of the total number of samples. | |

VALIDATION CRITERIA CHECKLIST

12. Were target analytes reported as not detected in the laboratory blanks? No

Comments: Target analytes were reported as not detected in the laboratory blanks, with the following exceptions.

| Method | Analyte | Batch | Concentration |
|--------|--------------------|--------|---------------|
| 200.7 | Dissolved Antimony | D93335 | 0.00050 mg/L |
| 8015D | TPH DRO | 72199 | 0.097 mg/L |

Detections of dissolved antimony and TPH DRO in the associated samples that were less than the blank results and/or less than the applicable reporting limits were assigned U qualifiers. Detections of TPH DRO in the associated samples that were greater than the reporting limits but less than or equal to 10 times the blank result were assigned JB qualifiers. Non-detections of the identified analytes in the associated samples and detections that were above the reporting limit and greater than ten times the blank concentration did not require qualification.

13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of matrix spike samples prepared was equal to at least 5% of the total number of samples, although MS samples were not prepared/reported for all analyses and/or batches. The matrix spike sample source for each analytical batch in this sample set has been indicated below.

| Method | Analytes | Batch | MS Sample Source |
|-----------|-----------------------------|-----------|------------------|
| 200.7 | Total Metals | 72141 | Not Prepared |
| 200.7 | Dissolved Metals | C93558 | Not Prepared |
| 200.8 | Total Metals | 72141 | Not Prepared |
| 200.8 | Dissolved Metals | D93335 | EB-12-14-22 |
| 245.1 | Total and Dissolved Mercury | 72202 | DUP-12-14-22 |
| 504.1 | EDB | 72230 | Not Prepared |
| 4500CN E | Cyanide | WG1976252 | OW-58 |
| 8015D | TPH DRO and MRO | 72199 | Not Prepared |
| 8015D | TPH GRO | R93515 | Not Prepared |
| 8260B | VOCs | R93479 | Not Prepared |
| 8260B | Benzene | R93506 | Not Prepared |
| 8270C SIM | SVOCs | 72138 | Not Prepared |
| 8270C | SVOCs | 72138 | Not Prepared |

Not Prepared – Matrix spikes were not prepared/reported for this batch.

14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? No

Comments: The percent recoveries and RPDs for MS/MSDs prepared from project samples were within data validation and laboratory QC limits, with the following exception.

The MS recovery for cyanide in Method 4500CN E batch WG1976252 was outside the laboratory QC limits of 90.0-110% at 89.9%. However, the recovery was within data validation limits of 75-125%. Validation action was not required.

15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? Yes

Comments: The total number of LCS samples analyzed was equal to at least 5% of the total number of samples.

VALIDATION CRITERIA CHECKLIST

16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? No

Comments: The LCS and LCSD percent recoveries and LCS/LCSD RPDs were within data validation and laboratory QC limits, with the following exceptions.

| Method | Analyte | Batch | LCS Recovery | LCSD Recovery | LCS/LCSD QC Limits |
|--------|--------------------|--------|--------------|---------------|--------------------|
| 200.7 | Total Zinc | 72141 | 69.7% | ----- | 70-130% |
| 200.7 | Dissolved Nickel | C93558 | 137% | ----- | 70-130% |
| 200.7 | Dissolved Chromium | C93558 | 50.7% | ----- | 70-130% |

Total zinc and dissolved chromium results in the associated samples were assigned J- qualifiers if detected and UJ if not detected due to evidence of potential low bias.

Detections of dissolved nickel in the associated samples were qualified as J+ due to evidence of potential high bias. Non-detections of dissolved nickel in the associated samples did not require qualification.

17. Were surrogate recoveries within laboratory QC limits? No

Comments: Surrogate recoveries were within laboratory QC limits, with the following exceptions.

| Method | Surrogate | Sample | Surrogate Recovery | QC Limits |
|--------|-----------------------|--------|--------------------|-----------|
| 8270C | 2-Fluorophenol | OW-58 | 0% | 15-84.5% |
| 8270C | Phenol-d ₅ | OW-58 | 0% | 15-67% |
| 8270C | 2,4,6-Tribromophenol | OW-58 | 1.94% | 15-108% |
| 8015D | BFB | OW-70 | 235% | 70-130% |
| 8015D | BFB | NAPI-3 | 147% | 70-130% |

TPH GRO was detected in the Method 8015D analyses for samples OW-70 and NAPI-3, and these results were assigned J+ qualifiers to indicate a potential high bias.

Since Method 8270C surrogate associations were not available from the laboratory, qualification was assigned to all of the target analytes in a given fraction (acid or base/neutral) when two or more surrogates from the same fraction (acid or base/neutral) were outside the acceptance range.

The analytes in the acid fraction of sample OW-58 were not detected. Since the recoveries of the surrogates in sample OW-58 were less than 10%, the results for the associated acid fraction analytes were assigned R qualifiers to indicate rejected (not usable) data based on evidence of extreme low bias.

Qualification of sample data was not required based on surrogate non-conformances in QC samples as the environmental samples were evaluated based on their specific surrogate recoveries.

18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? Yes

Comments: The number of trip, field, and equipment blanks collected was equal to at least 10% of the number of samples. One field blank sample, FB-12-14-22, and one equipment blank sample, EB-12-14-22, were collected as part of this sample set.

| VALIDATION CRITERIA CHECKLIST | |
|--|-----|
| 19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? | No |
| <p>Comments: Target analytes were not detected in the field blank and equipment blank samples, with the following exceptions.</p> <p>Total beryllium was detected in the Method 200.7 analysis of equipment blank sample EB-12-14-22 at a concentration of 0.0008 mg/L. Total beryllium was detected in samples NAPI-2 and OW-70 at concentrations less than the blank level and/or the laboratory reporting limits, and the results were assigned U qualifiers. Non-detections of this analyte in the associated samples did not require qualification.</p> <p>TPH DRO was detected in the Method 8015D analysis of equipment blank sample EB-12-14-22 at 0.025 mg/L. The TPH DRO results in Method 8015D batch 72199 were previously qualified due to a laboratory blank detection; therefore, additional qualification due to the equipment blank contamination was not required.</p> | |
| 20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? | Yes |
| <p>Comments: The number of field duplicates collected was equal to at least 10% of the number of samples.</p> <p>Sample DUP-12-14-22 was collected as a field duplicate of sample OW-58.</p> | |
| 21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? | No |
| <p>Comments: As indicated in the Field Duplicate Summary Table at the end of this report, field duplicate RPD values were within data validation QC limits of 0-30% for water samples, with the following exceptions.</p> <p>The RPD values for toluene, total xylenes, and naphthalene exceeded the data validation limit of 30% at 38.3%, 44.1%, and 31.0%, respectively. The toluene, total xylenes, and naphthalene results for samples OW-58 and DUP-12-14-22 were assigned J qualifiers due to evidence of poor precision</p> <p>An RPD value could not be calculated for phenol for the field duplicate pair OW-58 and DUP-12-14-22 since the analyte was detected in the duplicate sample and was undetected in the parent sample. As the detection in the duplicate sample was greater than two times the reporting limit, phenol was qualified as J and UJ for the duplicate and parent samples, respectively.</p> | |
| 22. For laboratory duplicates prepared from project samples, were RPDs within data validation or laboratory QC limits? | Yes |
| <p>Comments: Laboratory duplicates were prepared for the analysis of cyanide in batch WG1976252 from a sample not associated with this data set and sample NAPI-2.</p> <p>The RPD for the laboratory duplicate prepared from a project sample was within laboratory acceptance limits.</p> <p>The RPD value for the laboratory duplicate sample prepared from a non-project sample was evaluated and considered, but data were not qualified based on this result since matrix similarity to project samples could not be guaranteed.</p> | |

VALIDATION CRITERIA CHECKLIST

23. Were the following data relationships realistic?

- Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? N/A

Comments: Target analytes were not reported by more than one method.

- Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? No

Comments: The following table contains the exceptions in which the dissolved metals results exceeded the total metals results.

| <u>Sample ID</u> | <u>Analyte</u> | <u>Total Result (mg/L)</u> | <u>Dissolved Result (mg/L)</u> |
|------------------|----------------|----------------------------|--------------------------------|
| OW-58 | Antimony | 0.00053 | 0.0027 |
| KA-3 | Arsenic | 0.00062 | 0.00064 |
| DUP-12-14-22 | Arsenic | 0.0028 | 0.0032 |
| OW-58 | Lead | ND | 0.00034 |
| KA-3 | Zinc | 0.0046 | 0.0098 |

The EPA has not provided guidance or requirements for the evaluation, validation, and qualification of dissolved metals results that exceed the corresponding total metals results. Therefore, qualification of results was not performed based on these data.

FIELD DUPLICATE SUMMARY

| Client Sample ID: OW-58
Field Duplicate Sample ID: DUP-12-14-22 | | | | |
|--|----------------|---------------------|------------------|-----------------------------------|
| Analyte | Method | Laboratory Result | Duplicate Result | Relative Percent Difference (RPD) |
| Barium, Dissolved | E 200.7 | 4.7 mg/L | 4.8 mg/L | 2.1% |
| Barium, Total | E 200.7 | 4.9 mg/L | 5.3 mg/L | 7.8% |
| Nickel, Dissolved | E 200.7 | 0.045 mg/L | 0.045 mg/L | 0.0% |
| Nickel, Total | E 200.7 | 0.048 mg/L | 0.048 mg/L | 0.0% |

| 2-Methylnaphthalene | SW8270C | 42 µg/L | 55 µg/L | 26.8% |
| Acenaphthene | SW8270C | 1.8 µg/L | 2.0 µg/L | 10.5% |
| Anthracene | SW8270C | 0.36 µg/L | 0.32 µg/L | 11.8% +/-RL |
| Fluoranthene | SW8270C | 0.22 µg/L | 0.18 µg/L | 20.0% +/-RL |
| Fluorene | SW8270C | 3.0 µg/L | 2.9 µg/L | 3.4% |
| Naphthalene | SW8270C | 71 µg/L | 97 µg/L | 31.0% |
| Phenanthrene | SW8270C | 3.5 µg/L | 2.9 µg/L | 18.8% |
| Phenol | SW8270C | ND (20 µg/L) | 50 µg/L | DL |

Field duplicate RPD control limits are not to exceed 30% for water as established by USEPA Region I - New England Environmental Data Review Supplement for Region 1 Data Review Elements and Superfund Specific Guidance/Procedures, EQADR-Supplement2, September 2020.

DL – Indicates that the analyte was detected in one of the duplicate samples and was undetected in the other sample, and therefore an RPD could not be calculated. Data were not qualified since the detection was within two times the reporting limit. Non-detected results are indicated above with the applicable reporting limit as ND (RL).

+/-RL – Indicates that the detections in both of the samples were within two times the reporting limit. Qualification of data was not required.

The RPD values for toluene, total xylenes, and naphthalene exceeded the data validation limit of 30% at 38.3%, 44.1%, and 31.0%, respectively, which was evidence of poor precision. The toluene, total xylenes, and naphthalene results were qualified as J for samples OW-58 and DUP-12-14-22.

An RPD value could not be calculated for phenol for the field duplicate pair OW-58 and DUP-12-14-22 since the analyte was detected in the duplicate sample and was undetected in the parent sample. As the detection in the duplicate sample was greater than two times the reporting limit, phenol was qualified as J and UJ for the duplicate and parent samples, respectively.

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| EBD | Equipment blank detection |
| ERPD-FD | High field duplicate RPD. |
| HR-LCS | The LCS and/or LCSD percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| HR-SUR | The surrogate percent recovery was greater than the upper acceptable limit indicating a possible high bias. |
| LR-LCS | The LCS and/or LCSD percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| LR-SUR | The surrogate percent recovery was less than the lower acceptable limit indicating a possible low bias. |
| MBD | Method blank detection |
| MDLRL | Flagged by the laboratory: The result was greater than the MDL but less than the RL. |

Tier II Data Validation Report Summary

| | |
|--|--|
| Client: Marathon Oil | Laboratory: Hall Environmental Analysis Laboratory |
| Project Name: Western Refining Southwest, Quarterly GW | Sample Matrix: Groundwater |
| Project Number: 697-082-003 Task: 0002 | Sample Start Date: 01/12/2023 |
| Date Validated: 02/15/2023 | Sample End Date: 01/12/2023 |
| Parameters Included: <ul style="list-style-type: none">E. Coli by Standard Methods for the Examination of Water and Wastewater (SM) Method 9223B | |
| Laboratory Project ID: 2301520 | |
| Data Validator: Daran O'Hollearn, Lead Project Scientist | |
| Reviewer: Mike Phillips, Senior Chemist | |

DATA EVALUATION CRITERIA SUMMARY

A Tier II Data Validation was performed by Trihydro Corporation's Chemical Data Evaluation Services Group on the analytical data report packages generated by Hall Environmental Analysis Laboratory of Albuquerque, New Mexico, evaluating samples from the Marathon Oil site, located in Gallup, New Mexico.

Method compliance was established by reviewing sample integrity, holding times, detection limits, and initial and continuing calibrations (where applicable), against method-specific requirements.

Completeness was evaluated by determining the overall ratio of the number of samples and analyses planned versus the number of samples with valid analyses. Determination of completeness included a review of the chain-of-custody (CoC), laboratory analytical methods, and other laboratory and field documents associated with this analytical data set.

SAMPLE NUMBERS TABLE

| Client Sample ID | Laboratory Sample Number |
|------------------|--------------------------|
| STP-1 to EP-2 | 2301520-001 |

Due to limitations of the Project Direct database, the E. Coli result of >24196 most probable number (MPN) per 100 milliliters could not be reported in the database.

Tier II Data Validation Report Summary

The laboratory data were reviewed to evaluate compliance with the methods and the quality of the reported data. Assessment of CoC completeness is included in Item 3 of the Data Validation Checklist. A check mark (✓) indicates that the referenced validation criteria were deemed acceptable, whereas a crossed circle (⊗) indicates validation criteria for which the data have been qualified by the data validator. An empty circle (○) indicates that the specified criterion does not apply to the reviewed data. Details are noted in the tables below.

Validation Criteria

- ✓ Data Completeness
- ✓ CoC Documentation (Item 3)
- ⊗ Holding Times and Preservation (Items 6 and 7)
- Initial and Continuing Calibrations (Items 9 and 10)
- Laboratory Blanks (Items 11 and 12)
- Matrix Spikes (MS) and Matrix Spike Duplicates (MSD) (Items 13 and 14)
- Laboratory Control Spikes (LCS) and Laboratory Control Spike Duplicates (LCSD) (Items 15 and 16)
- System Monitoring Compounds (i.e., Surrogates) (Item 17)
- Field, Equipment, and Trip Blanks (Items 18 and 19)
- Field Duplicates (Items 20 and 21)
- Laboratory Duplicates (Item 22)

Guidance References

Chemical data validation was conducted in accordance with the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) National Functional Guidelines for the analyses listed below, or by the appropriate method if not covered in the National Functional Guidelines.

- Data for organic analyses were evaluated according to validation criteria set forth in the USEPA CLP National Functional Guidelines for Organic Superfund Methods Data Review, document number EPA-540-R-20-005, November 2020 with additional reference to the USEPA CLP National Functional Guidelines for Organic Data Review, document number EPA 540/R-99/008, October 1999.
- Trihydro Data Validation Variance Documentation, April 2022.

Tier II Data Validation Report Summary

OVERALL DATA PACKAGE ASSESSMENT

Based on a data validation review, the data are acceptable as delivered. Data qualified by the laboratory are discussed in Item 2 of the Validation Criteria Checklist.

The purpose of validating data and assigning qualifiers is to assist in proper data interpretation. Data that are not qualified meet the site data quality objectives. If values are assigned qualifiers other than an R (rejected, data not usable), the data may be used for site evaluation; however, consideration should be given to the reasons for qualification when interpreting sample concentrations. Data points that are assigned an R qualifier should not be used for site evaluation purposes.

If applicable, text was identified in **bold font** in the Validation Criteria Checklist to indicate that further action and/or qualification of the data were required. Data may have been qualified with J data flags by the laboratory if the result was greater than or equal to the method detection limit (MDL) but less than the reporting limit (RL). These laboratory-applied J flags were preserved, if present, and included in the Data Qualification Summary table at the end of this report. If applicable, data validation qualifiers were added for the items noted with crossed circles in the Validation Criteria section above. Please see the Data Qualification Summary table at the end of this report for a complete list of samples and analytes qualified.

If data would be qualified with more than one flag, one qualifier was assigned based on the severity; however, all reasons for qualification were retained. Data that would be qualified with both J+ and J- flags were evaluated based on validation criteria and assigned the appropriate flag. The hierarchy of qualifiers from the most to least severe is as follows:

- R > JB/U > NJ > J+/J- > J/UJ

Data qualifiers used during this validation are included in the following table.

| <u>Qualifier</u> | <u>Definition</u> |
|------------------|-------------------------|
| J | Estimated concentration |

Data Completeness

The analysis was performed as requested on the CoC records. The associated sample was received by the laboratory and analyzed properly unless otherwise noted in the Criteria Checklist below. The complete data package consisted of 1 data point. The data point was not rejected. The data completeness measure for this data package is calculated to be 100% and is acceptable.

| VALIDATION CRITERIA CHECKLIST | |
|---|-----|
| 1. Was the report free of non-conformances identified by the laboratory? | Yes |
| Comments: The laboratory did not report non-conformances related to the analytical data for this sample set. | |
| 2. Were the data free of data qualification flags and/or notes used by the laboratory?
If no, define. | No |
| Comments: The laboratory used the following data qualification flag with this data set.
H – Holding times for preparation or analysis exceeded. | |
| 3. Were sample CoC forms and custody procedures complete? | Yes |
| Comments: The CoC records from field to laboratory were complete, and custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. Custody seals were not present because the sample was transferred to a laboratory field courier service for transport from the field to the laboratory, and custody was maintained at all times. | |
| 4. Were detection limits in accordance with the quality assurance project plan (QAPP), permit, or method, or indicated as acceptable? | Yes |
| Comments: The detection limits appeared to be acceptable. The following dilution was applied.
<u>Method 9223B</u> : Sample STP-1 to EP-2 was diluted by a factor of 10 times for the analysis of E Coli. | |
| 5. Were the reported analytical methods and constituents in compliance with the QAPP, permit, or CoC? | Yes |
| Comments: The reported analytical method was in compliance with the CoC, and the laboratory reported the requested constituent in accordance with the CoC. | |
| 6. Were samples received in good condition within method-specified requirements? | No |
| Comments: The sample was received on ice, in good condition, and with the cooler temperature outside the recommended temperature range of 4°C ± 2°C at 0.9°C as noted on the CoC and Sample Log-in Check List.
The cooler temperature below 2.0°C was judged as acceptable since the laboratory did not report the sample container as broken or frozen. | |
| 7. Were samples extracted/digested and analyzed within method-specified or technical holding times? | No |
| Comments: The sample was not analyzed within method-specific holding times.
<u>Method 9223B</u> : Sample STP-1 to EP-2 was analyzed for E. Coli outside the defined holding time of 24 hours to 48 hours by approximately 2 days. E. Coli was detected in sample STP-1 to EP-2, and this result was assigned a J qualifier based on the holding time exceedance. | |
| 8. Were reported units appropriate for the sample matrix/matrices and analytical method(s)? Specify if wet or dry units were used for soil. | Yes |
| Comments: The result was reported in concentration units of most probable number per 100 milliliters (MPN/ 100mL), which was acceptable for the sample matrix and the analysis requested. | |
| 9. Did the laboratory provide any specific initial and/or continuing calibration results? | No |
| Comments: Initial and continuing calibration data were not included as part of this data set. | |
| 10. If initial and/or continuing calibration results were provided, were the results within acceptable limits? | N/A |
| Comments: Initial and continuing calibration data were not included as part of this data set. | |

| VALIDATION CRITERIA CHECKLIST | |
|---|-----|
| 11. Was the total number of laboratory blank samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | No |
| Comments: The total number of laboratory blank samples prepared was not equal to at least 5% of the total number of samples. | |
| 12. Were target analytes reported as not detected in the laboratory blanks? | N/A |
| Comments: Laboratory blanks were not reported for this data set. | |
| 13. Was the total number of MS samples prepared equal to at least 5% of the total number of samples or analyzed as required by the method? | No |
| Comments: The total number of matrix spike samples prepared was not equal to at least 5% of the total number of samples. Matrix spikes were not prepared for the analyses in this data set. | |
| 14. For MS/MSDs prepared from project samples, were percent recoveries and RPDs within data validation or laboratory quality control (QC) limits? | N/A |
| Comments: MS/MSD samples were not prepared using project samples as the sample source. | |
| 15. Was the total number of LCSs analyzed equal to at least 5% of the total number of samples or analyzed as required by the method? | No |
| Comments: The total number of LCS analyzed was not equal to at least 5% of the total number of samples. LCS were not reported in this data set. | |
| 16. Were LCS/LCSD percent recoveries and LCS/LCSD RPDs within data validation or laboratory QC limits? | N/A |
| Comments: LCS and LCSDs were not analyzed as part of this sample set. | |
| 17. Were surrogate recoveries within laboratory QC limits? | N/A |
| Comments: Surrogates were not required for the analysis included in this data set. | |
| 18. Were the number of trip blank, field blank, and/or equipment blank samples collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? | No |
| Comments: Trip, field, and equipment blank samples were not collected for this sample set. | |
| 19. Were target analytes reported as not detected in the trip blank, field blank, and/or equipment blank samples? | N/A |
| Comments: Trip, field, and equipment blank samples were not collected for this sample set. | |
| 20. Was the number of field duplicates collected equal to at least 10% of the total number of samples or as required by the project guidelines, QAPP, SAP, or permit? | No |
| Comments: Field duplicates were not collected as part of this sample set. | |
| 21. Were field duplicate RPD values within data validation QC limits (soil 0-50%, water 0-30%, or air 0-25%)? | N/A |
| Comments: Field duplicates were not collected as part of this sample set. | |
| 22. For laboratory duplicates prepared from project samples, were RPDs within data validation or laboratory QC limits? | N/A |
| Comments: Laboratory duplicate samples were not prepared for this sample set. | |

| VALIDATION CRITERIA CHECKLIST | | |
|---|--|-----|
| 23. Were the following data relationships realistic? | | |
| <ul style="list-style-type: none">Target analytes were reported by more than one method (e.g., 8260/8270, EPH/8270)? | | N/A |
| Comments: Target analytes were not reported by more than one method. | | |
| <ul style="list-style-type: none">Both total and dissolved metals analyses were performed, and the total metals results were greater than or equal to the dissolved metals results? | | N/A |
| Comments: Total and dissolved metals analyses were not performed for this data set. | | |

DATA QUALIFICATION SUMMARY

| Abbreviation | Reason |
|--------------|---|
| HT-AN | Sample was analyzed outside of the method holding time. |

| Analyte | Method | Field Sample ID | Lab Sample ID | Result | Limit | Units | Reviewer Qualifier | DV Flag Reasons |
|------------------|----------|-----------------|---------------|--------|-------|-----------|--------------------|-----------------|
| Coliform, E-Coli | EPA 9223 | STP-1 to EP-2 | 2301520-001A | >24196 | 10 | MPN/100ml | J | HT-AN |
