This demonstration should be in the form of a comprehensive report (electronic submittals in .pdf format are preferred) including a scaled site map, sampling diagrams, relevant field notes, photographs of any excavation prior to backfilling, laboratory data including chain of custody documents of final sampling, and a narrative of the remedial activities. Refer to 19.15.29.12 NMAC.

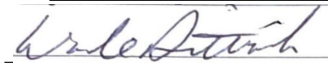

Closure Report Attachment Checklist: *Each of the following items must be included in the closure report.*

- ☒ A scaled site and sampling diagram as described in 19.15.29.11 NMAC
- ☒ Photographs of the remediated site prior to backfill or photos of the liner integrity if applicable (Note: appropriate OCD District office must be notified 2 days prior to liner inspection)
- ☒ Laboratory analyses of final sampling (Note: appropriate ODC District office must be notified 2 days prior to final sampling)
- ☒ Description of remediation activities

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. The responsible party acknowledges they must substantially restore, reclaim, and re-vegetate the impacted surface area to the conditions that existed prior to the release or their final land use in accordance with 19.15.29.13 NMAC including notification to the OCD when reclamation and re-vegetation are complete.

BACKGROUND AND RELEASE CHARACTERIZATION

On February 3, 2021, OXY USA., Inc (OXY), discovered a release at the Madera 35 Federal 001H well site. The release was the result of a fracking operation less than a mile away that caused a pressure “frac hit” downhole at the Madera 35 Federal 001H, causing the stuffing box to blow out at the well head. The release affected the approximately 15,500 square feet (ft²) of the pad. Overspray from the pressure impacted approximately 14,300 ft² of the adjacent pasture at the northeast corner of the pad. An estimated 80 barrels (bbls) of fluids were released. During the initial response action, the well was shut in and a vacuum truck was utilized to recover approximately 75 bbls of free-standing liquid (approximately 74 bbls of produced water and 1 bbl of crude oil).

SITE INFORMATION AND CLOSURE CRITERIA**Depth to Groundwater/Wellhead Protection:**

Data Source	Well Number	Data Date	Depth
NMOSE	NA	NA	NA
USGS	NA	NA	NA

A search of a groundwater database maintained by The New Mexico Office of the State Engineer (NMOSE) and the United States Geological Survey (USGS) was conducted to determine the average depth to groundwater within a one (1) mile radius of the release site and to see if there are any registered water wells within a one-half (1/2) mile radius of the impacted area. No NMOSE or USGS wells were found within a 5660-meter (approximately 18,600 foot) radius of the Madera 35 Federal 001H site.

General Site Characterization and Distance to Nearest Significant Watercourse:

Site Characterization	Distance to Nearest Watercourse
Low Karst	> than 1,000 feet

A risk-based site assessment/characterization was performed in accordance with the New Mexico Oil Conservation Division (NMOCD) Rule (Title 19 Chapter 15 Part 29) for releases on oil and gas development and production in New Mexico (effective August 14, 2018). To summarize the site assessment/characterization evaluation, the affected area has low potential for cave and karst, and no other water bodies (water wells, playas, sink holes, springs, water courses, lake beds, wetlands) or receptors (residence, school, hospital, institution, church, mining, municipal or other ordinance boundaries) were located within the regulatorily promulgated distances from the site. A ranking score of 20 was assigned to the site because there are no known water wells within a one-half mile radius of the area impacted by the release.

Closure Criteria:

Pad & Pasture	Recommended Remedial Action Levels (RRALs)
Chlorides	600 mg/kg
TPH (GRO and DRO and MRO)	100 mg/kg
Benzene	10 mg/kg
BTEX	50 mg/kg

DELINEATION AND REMEDIATION ACTIVITIES**Initial Sample Activities:**

Delineation Summary	
Delineation Dates	2/22/2021 – 4/7/2021
Sample Locations	SP1 – SP7, FP1 - FP4 (11 areas)
Total Initial Samples	83
Depths Sampled	Surface down to 7 feet bgs.
Delineation Map	Figure 2
Laboratory Results	Table 1

A total of eleven (11) delineation sample points (SP1 through SP7) on the pad, and field pasture (FP-1 through FP-4) in the pasture were investigated using a hand auger or backhoe, to depths ranging between the surface and 7 ft bgs. A total of eighty-three (83) samples were collected for laboratory analysis during the delineation of the site.

All soil samples were placed into laboratory supplied glassware, labeled, and maintained on ice until delivery to NMOCD-approved laboratory (Cardinal Laboratories of Hobbs, NM) for the analysis of chloride using Method SM4500 Cl-B, Benzene, Toluene, Ethylbenzene and Xylenes (BTEX) by EPA Method 8021 B and Total Petroleum Hydrocarbon (TPH) constituents by EPA 8015M.

Confirmation Sampling Activities:

Remediation Summary	
Remediation Dates	04/08/2021 – 04/22/2021
NMOCD Confirmation Sample Notification	04/14/2021 @ 1457 to ocd.enviro@state.nm.us
Confirmation Sample Area	200 Sq. Ft.
Confirmation Samples	GA1-GA154 (Pad & Pasture Floors/Walls)
Total Confirmation Samples	259
Depths Excavated	Minimum of 3” to a maximum of 4’ 6” ft.
Total Cubic Yards Disposed	7,502 Cubic Yards
Remediation Map	Figure 3a & 3b

Impacted soils within the release perimeter were excavated based on laboratory analytical data derived from soil samples gathered from the site during delineation sampling.

Using ArcGIS mapping technology, a grid area (a 200 ft² grid consisting of 10 ft. x 20 ft. rectangles in the interior, plus area polygons approximately 200 ft² around the perimeter – see Figure 3a & 3b) was superimposed onto a drone photograph of release for use as a sampling guide for the environmental techs. Using the 200 ft². map grid areas, a total of two hundred fifty-nine (259) confirmation floor and associated wall soil samples, under battery Delineation Samples and Wall Comp samples were collected from the off-site pasture and on-site pad areas. The “grid area” (GA) designated samples were 5-point composites of a “grid area” floor or an associated wall to the specific grid area.

Excavations of the floor and sidewalls were advanced vertically and laterally until field titration indicated chloride concentrations were below the strictest 19.15.29.12 Table 1 - New Mexico Administrative Code Closure Criteria (NMAC Table 1) of 600 mg/kg for areas where depth to groundwater is 50 feet below ground surface (bgs) or less. Confirmation of remediation was performed by collecting of five-point composite grid area (GA) samples from the GAs superimposed onto the excavated floors and walls of the impacted area.

An aliquot of each confirmation sample titrated in the field was sent to the laboratory for analysis of chloride, Benzene Toluene Ethylbenzene and Xylenes (BTEX) and Total Petroleum Hydrocarbons (TPH) to verify that the assigned grid area had been remediated to the strictest NMAC Table 1 criteria. Approximately 7502 cubic yards of impacted soils were transported under manifest to an approved disposal facility; R-360 Red Bluff Permit # STF-065 (Texas).

Upon receiving laboratory data for the grid area samples and verifying that the soils remaining in-situ within excavated grid areas yielded laboratory derived results below the selected NMAC Table 1 criteria, the pad excavation area was backfilled with locally sourced, non-impacted caliche and the pasture excavation area was backfilled with locally sourced soil similar to the native soils in the area.

SITE RECLAMATION AND RESTORATION

Areas affected by the release and the associated remediation activities were substantially restored to a condition which existed prior to the Release to the extent practicable. The affected area was contoured and/or compacted to achieve erosion control, stability and preservation of surface water flow to the extent practicable. Affected areas not on production pads and/or lease roads will be reseeded with the applicable areal mixture during the first favorable growing season following closure of the site in accordance with the applicable regulatory agency.

CLOSURE REQUEST

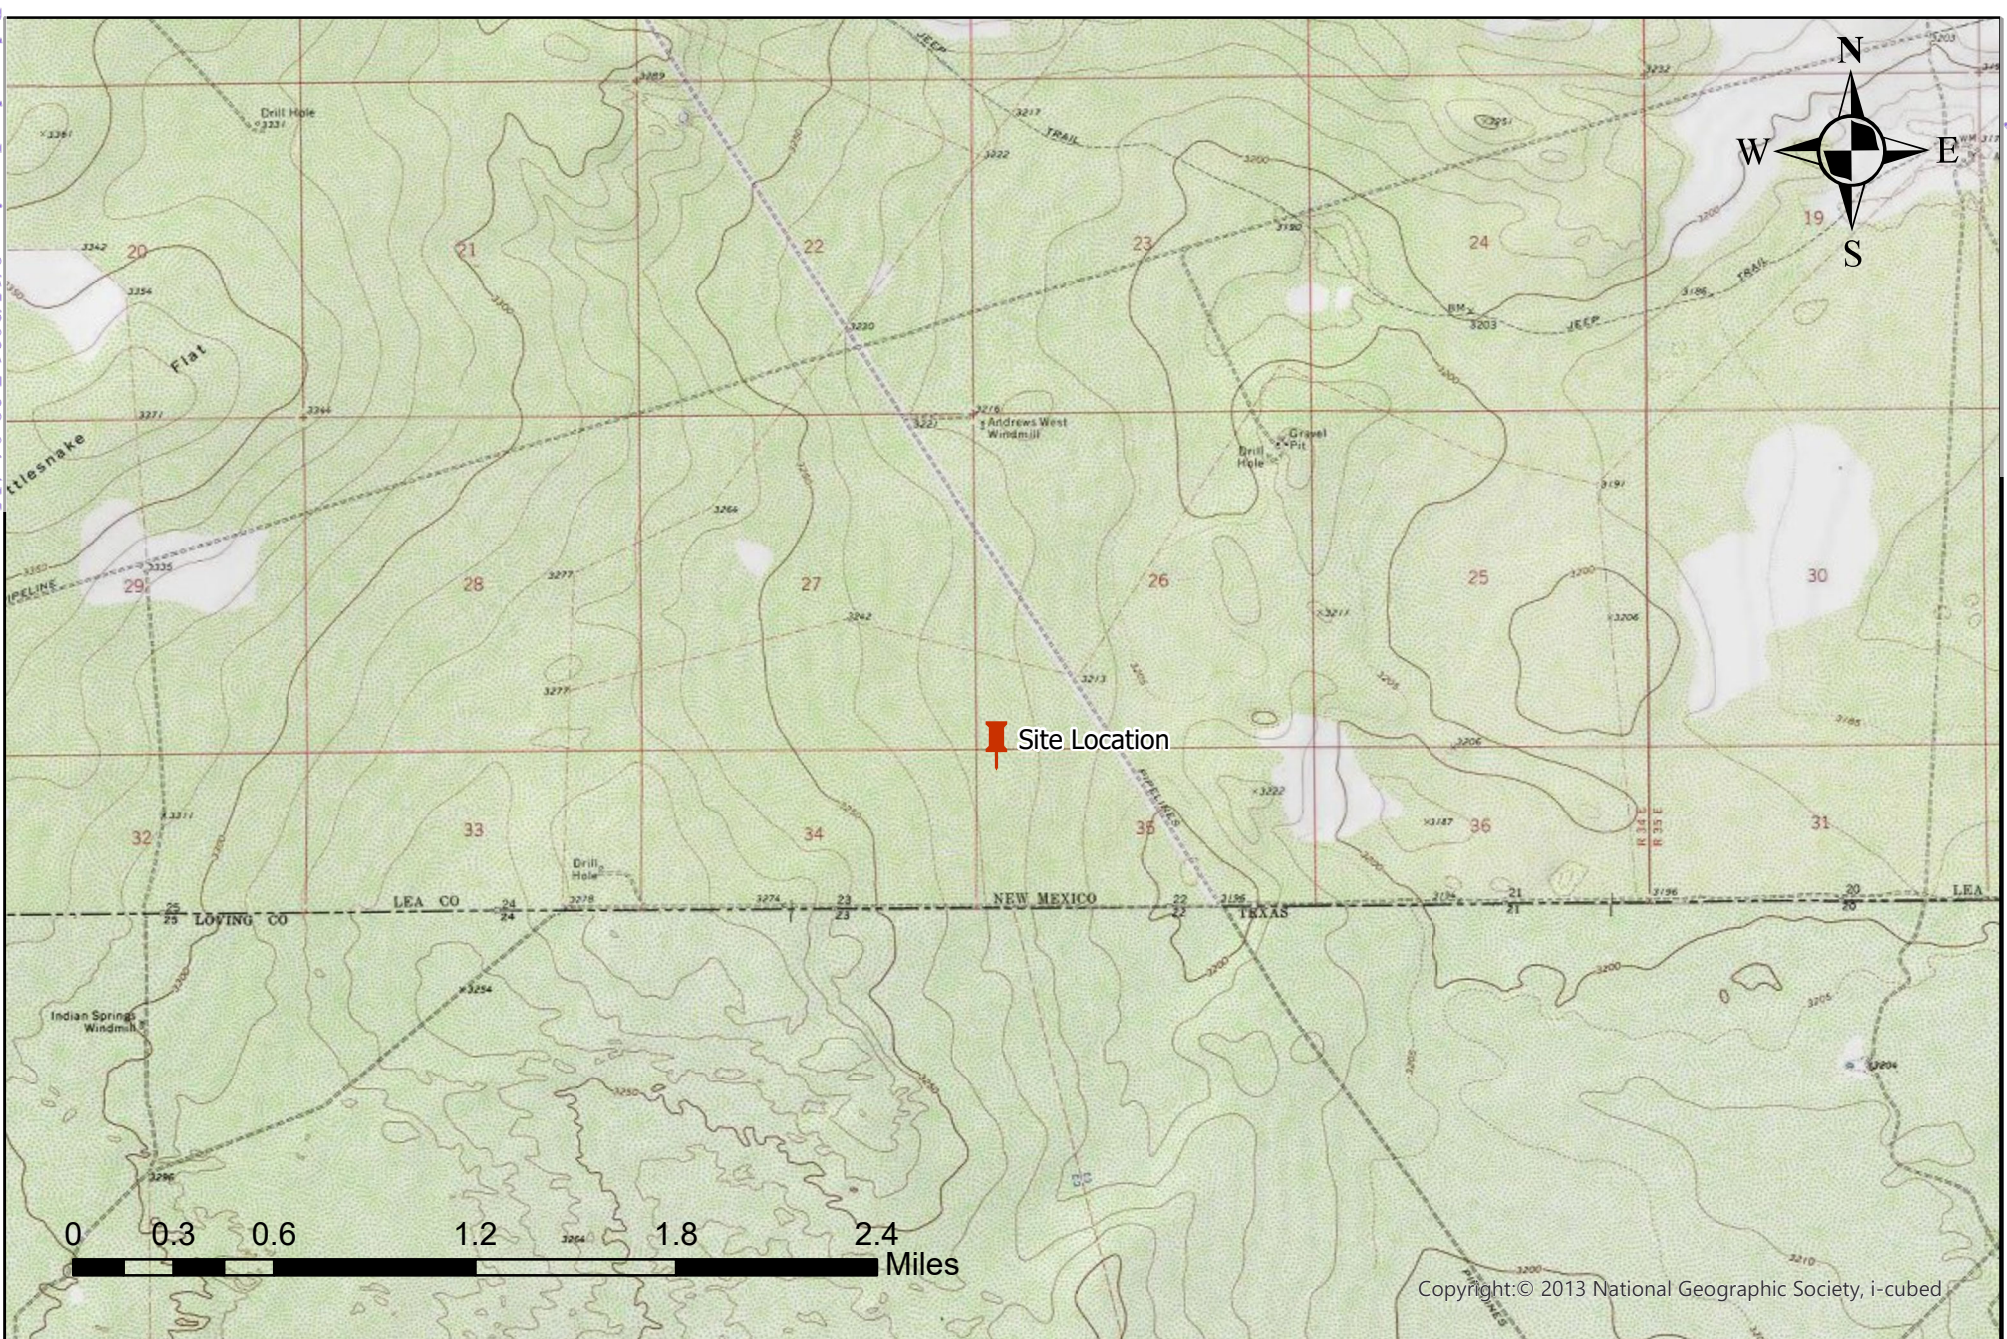

The OXY Madera 35 Federal 001H release site has been remediated to meet the strictest standards of Table I of 19.15.29.12 NMAC. Trinity Oilfield Services respectfully requests that the New Mexico Oil Conservation Division grant closure approval for the OXY Madera 35 Federal 001H produced water release that occurred on February 3, 2021 (Tracking # NAPP2103550799).

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:20,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Web Soil Survey URL:

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Lea County, New Mexico

Survey Area Data: Version 17, Jun 8, 2020

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Mar 20, 2020—Mar 22, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.
