UPSET FLARING EVENT SPECIFIC JUSTIFICATIONS FORM**Facility:** Lost Tank 18 CPF**Flare Date:** 10/11/2022**Duration of event:** 2 Hour 19 Minutes**MCF Flared:** 1553**Start Time:** 12:26 AM**End Time:** 02:45 AM

Cause: Third party operated downstream facility > MPLX Preakness Gas Plant > Facility issues > High Discharge Pressure > Lost Tank 13 Boo CS > High Discharge Pressure > Lost Tank 18 CPF Compressor Malfunctions > Compression Equipment Shut Down

Method of Flared Gas Measurement: Gas Flare Meter

Comments:

1. Reason why this event was beyond Operator's control:

The emissions event was caused by the unforeseen, unexpected, sudden, and unavoidable interruption, restriction or complete shut-in of a gas pipeline by a third-party pipeline operator, which impacted Oxy's ability to send gas to a third-party gas pipeline. This interruption, restriction or complete shut-in of the gas pipeline by a third-party pipeline operator is downstream of Oxy's custody transfer point and out of Oxy's control to foresee, avoid or prevent from happening and did not stem from any of Oxy's upstream facility activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and preventative maintenance practices. In this case, third party operated downstream facility, MPLX Preakness Gas Plant, had continuing gas plant issues from the day before which impacted the Lost Tank 18 CPF's operations and equipment. MPLX Preakness Gas Plant began to encounter high level liquid issues, which in turn caused a gas plant to go down which in turn caused high pressures in the pipeline and restricted flow which caused Lost Tank BOO 13 compressor station to pressure up, which then triggered a flaring event at the Lost Tank 18 CPF. MPLX Preakness Gas Plant called field personnel, after losing a plant, that they were cutting flow intake rates in half. This event could not have been avoided or prevented from happening as third party operated downstream facility, MPLX Preakness Gas Plant, began making intake flow gas reductions, while at the same time asking OXY personnel to adjust its outgoing gas flow rates, which takes time to adjust. This event is out of OXY's control yet, OXY made every effort to control and minimize emissions as much as possible.

Steps Taken to limit duration and magnitude of venting or flaring:

It is OXY's policy to route its stranded gas to a flare during an unforeseen and unavoidable emergency or malfunction, that is beyond Oxy's control to avoid, prevent or foresee, to minimize emissions as much as possible as part of the overall steps taken to limit duration and magnitude of flaring. The flare at this facility has a 98% combustion efficiency in order to lessen emissions as much as possible. In this case, third party operated downstream facility, MPLX Preakness Gas Plant, had continuing gas plant issues from the day before which impacted the Lost Tank 18 CPF's operations and equipment. MPLX Preakness Gas Plant began to encounter high level liquid issues, which in turn caused a gas plant to go down which in turn caused high pressures in the pipeline and restricted flow which caused Lost Tank BOO 13 compressor station to pressure up, which then triggered a flaring event at the Lost Tank 18 CPF. MPLX Preakness Gas Plant called field personnel, after losing a plant, that they were cutting flow intake rates in half. This event could not have been avoided or prevented from happening as third party operated downstream facility, MPLX Preakness Gas Plant,

began making intake flow gas reductions, while at the same time asking OXY personnel to adjust its outgoing gas flow rates, which takes time to adjust. Also, Oxy production techs began to divert gas to DCP via buyback meters in the Red Tanks as an addition step in minimizing to try and keep from completely shutting in new flowing wells as a prevention from losing the wells. This event is out of OXY's control yet, OXY made every effort to control and minimize emissions as much as possible.

3. Corrective Actions taken to eliminate the cause and reoccurrence of venting or flaring:

Oxy cannot take any corrective actions to eliminate the cause and potential reoccurrence of an MPLX Preakness Gas Plant restriction or shut-in, as this control issue is downstream of Oxy's custody transfer point and out of Oxy's control to avoid, prevent from happening or reoccurring. MPLX Preakness Gas Plant may have issues which will reoccur from time to time, and its subsequent actions to reduce, curtail and/or perform any type of adjustments to its incoming flow intake rates, will trigger a spike in their gas line pressure, which in turn, directly impacts Oxy's ability to send gas to them. When MPLX Preakness Gas Plant has downstream activity issues or greatly struggles to handle the volume of gas being sent to them by Oxy, MPLX Preakness Gas Plant then restricts Oxy's ability to send gas, which then prompts Oxy to route all of its stranded gas to flare. OXY makes every effort to control and minimize emissions as much as possible. The only actions that Oxy can take and handle that is within its control, is to keep continually communicate with MPLX Preakness Gas Plant personnel during these types of situations.

QUESTIONS

Operator: OXY USA INC P.O. Box 4294 Houston, TX 772104294	OGRID: 16696
	Action Number: 156463
	Action Type: [C-129] Amend Venting and/or Flaring (C-129A)

QUESTIONS

Prerequisites <i>Any messages presented in this section, will prevent submission of this application. Please resolve these issues before continuing with the rest of the questions.</i>	
Incident Operator	[16696] OXY USA INC
Incident Type	Flare
Incident Status	Closure Not Approved
Incident Well	Unavailable.
Incident Facility	[fAPP2226965761] Lost Tank 18 CPF
Only valid Vent, Flare or Vent with Flaring incidents (selected above in the Application Details section) that are assigned to your current operator can be amended with this C-129A application.	

Determination of Reporting Requirements <i>Answer all questions that apply. The Reason(s) statements are calculated based on your answers and may provide additional guidance.</i>	
Was this vent or flare caused by an emergency or malfunction	Yes
Did this vent or flare last eight hours or more cumulatively within any 24-hour period from a single event	No
Is this considered a submission for a vent or flare event	Yes, major venting and/or flaring of natural gas.
<i>An operator shall file a form C-141 instead of a form C-129 for a release that, includes liquid during venting and/or flaring that is or may be a major or minor release under 19.15.29.7 NMAC.</i>	
Was there at least 50 MCF of natural gas vented and/or flared during this event	Yes
Did this vent or flare result in the release of ANY liquids (not fully and/or completely flared) that reached (or has a chance of reaching) the ground, a surface, a watercourse, or otherwise, with reasonable probability, endanger public health, the environment or fresh water	No
Was the vent or flare within an incorporated municipal boundary or withing 300 feet from an occupied permanent residence, school, hospital, institution or church in existence	No

Equipment Involved	
Primary Equipment Involved	Other (Specify)
Additional details for Equipment Involved. Please specify	Emergency Flare > Third party operated downstream facility > MPLX Preakness Gas Plant > Facility issues > High Discharge Pressure > Lost Tank 13 Boo CS > High Discharge Pressure > Lost Tank 18 CPF Compressor Malfunctions > Compression Equipment Shut Down

Representative Compositional Analysis of Vented or Flared Natural Gas <i>Please provide the mole percent for the percentage questions in this group.</i>	
Methane (CH4) percentage	72
Nitrogen (N2) percentage, if greater than one percent	4
Hydrogen Sulfide (H2S) PPM, rounded up	0
Carbon Dioxide (CO2) percentage, if greater than one percent	4
Oxygen (O2) percentage, if greater than one percent	0
<i>If you are venting and/or flaring because of Pipeline Specification, please provide the required specifications for each gas.</i>	
Methane (CH4) percentage quality requirement	Not answered.
Nitrogen (N2) percentage quality requirement	Not answered.
Hydrogen Sufide (H2S) PPM quality requirement	Not answered.
Carbon Dioxide (CO2) percentage quality requirement	Not answered.
Oxygen (O2) percentage quality requirement	Not answered.

QUESTIONS, Page 2

Action 156463

QUESTIONS (continued)

Operator: OXY USA INC P.O. Box 4294 Houston, TX 772104294	OGRID: 16696
	Action Number: 156463
	Action Type: [C-129] Amend Venting and/or Flaring (C-129A)

QUESTIONS

Date(s) and Time(s)	
Date vent or flare was discovered or commenced	10/11/2022
Time vent or flare was discovered or commenced	12:26 AM
Time vent or flare was terminated	02:45 AM
Cumulative hours during this event	2

Measured or Estimated Volume of Vented or Flared Natural Gas	
Natural Gas Vented (Mcf) Details	Not answered.
Natural Gas Flared (Mcf) Details	Cause: Other Other (Specify) Natural Gas Flared Released: 1,553 Mcf Recovered: 0 Mcf Lost: 1,553 Mcf.
Other Released Details	Not answered.
Additional details for Measured or Estimated Volume(s). Please specify	Gas Flare Meter
Is this a gas only submission (i.e. only significant Mcf values reported)	Yes, according to supplied volumes this appears to be a "gas only" report.

Venting or Flaring Resulting from Downstream Activity	
Was this vent or flare a result of downstream activity	Yes
Was notification of downstream activity received by this operator	No
Downstream OGRID that should have notified this operator	[258315] MARKWEST ENERGY OPERATING CO LLC
Date notified of downstream activity requiring this vent or flare	
Time notified of downstream activity requiring this vent or flare	Not answered.

Steps and Actions to Prevent Waste	
For this event, this operator could not have reasonably anticipated the current event and it was beyond this operator's control	True
Please explain reason for why this event was beyond this operator's control	The emissions event was caused by the unforeseen, unexpected, sudden, and unavoidable interruption, restriction or complete shut-in of a gas pipeline by a third-party pipeline operator, which impacted Oxy's ability to send gas to a third-party gas pipeline. This interruption, restriction or complete shut-in of the gas pipeline by a third-party pipeline operator is downstream of Oxy's custody transfer point and out of Oxy's control to foresee, avoid or prevent from happening and did not stem from any of Oxy's upstream facility activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and preventative maintenance practices. In this case, third party operated downstream facility, MPLX Preakness Gas Plant, had continuing gas plant issues from the day before which impacted the Lost Tank 18 CPF's operations and equipment. MPLX Preakness Gas Plant began to encounter high level liquid issues, which in turn caused a gas plant to go down which in turn caused high pressures in the pipeline and restricted flow which caused Lost Tank BOO 13 compressor station to pressure up, which then triggered a flaring event at the Lost Tank 18 CPF. MPLX Preakness Gas Plant called field personnel, after losing a plant, that they were cutting flow intake rates in half. This event could not have been avoided or prevented from happening as third party operated downstream facility, MPLX Preakness Gas Plant, began making intake flow gas reductions, while at the same time asking OXY personnel to adjust its outgoing gas flow rates, which takes time to adjust. This event is out of OXY's control yet, OXY made every effort to control and minimize emissions as much as possible.
Steps taken to limit the duration and magnitude of vent or flare	It is OXY's policy to route its stranded gas to a flare during an unforeseen and unavoidable emergency or malfunction, that is beyond Oxy's control to avoid, prevent or foresee, to minimize emissions as much as possible as part of the overall steps taken to limit duration and magnitude of flaring. The flare at this facility has a 98% combustion efficiency in order to lessen emissions as much as possible. In this case, third party operated downstream facility, MPLX Preakness Gas Plant, had continuing gas plant issues from the day before which impacted the Lost Tank 18 CPF's operations and equipment. MPLX Preakness Gas Plant began to encounter high level liquid issues, which in turn caused a gas plant to go down which in turn caused high pressures in the pipeline and restricted flow which caused Lost Tank BOO 13 compressor station to pressure up, which then triggered a flaring event at the Lost Tank 18 CPF. MPLX Preakness Gas Plant called field personnel, after losing a plant, that they were cutting flow intake rates in half. This event could not have been avoided or prevented from happening as third party operated downstream facility, MPLX Preakness Gas Plant, began making intake flow gas reductions, while at the same time asking OXY personnel to adjust its outgoing gas flow rates, which takes time to adjust. Also, Oxy production techs began to divert gas to DCP via buyback meters in the Red Tanks as an addition step in minimizing to try and keep from completely shutting in new flowing wells as a prevention from losing the wells. This event is out of OXY's control yet, OXY made every effort to control and minimize emissions as much as possible.
Corrective actions taken to eliminate the cause and reoccurrence of vent or flare	Oxy cannot take any corrective actions to eliminate the cause and potential reoccurrence of an MPLX Preakness Gas Plant restriction or shut-in, as this control issue is downstream of Oxy's custody transfer point and out of Oxy's control to avoid, prevent from happening or reoccurring. MPLX Preakness Gas Plant may have issues which will reoccur from time to time, and its subsequent actions to reduce, curtail and/or perform any type of adjustments to its incoming flow intake rates, will trigger a spike in their gas line pressure, which in turn, directly impacts Oxy's ability to send gas to them. When MPLX Preakness Gas Plant has downstream activity issues or greatly struggles to handle the volume of gas being sent to them by Oxy, MPLX Preakness Gas Plant then restricts Oxy's ability to send gas, which then prompts Oxy to route all of its stranded gas to flare. OXY makes every effort to control and minimize emissions as much as possible. The only actions that Oxy can take and handle that is within its control, is to keep continually communicate with MPLX Preakness Gas Plant personnel during these types of situations.
