# 2021 Groundwater Monitoring Report

**East Hobbs Junction  
Lea County, New Mexico**

Phillips 66 Company

March 09, 2022

→ The Power of Commitment

# Executive Summary

GHD conducted semi-annual groundwater monitoring on March 15, 16, and 17, 2021 and on September 13, 14, and 15, 2021 at the Phillips 66 East Hobbs Junction in Hobbs, New Mexico. Groundwater levels were measured in all Site monitor wells using an oil/water interface probe prior to purging and sampling.

Ten groundwater samples were collected during the March 2021 event and eight groundwater samples were collected during the September 2021 event. Monitor well (MW) MW-9 was not sampled due to the presence of light non-aqueous phase liquid. Groundwater samples were submitted under chain of custody documentation to Pace Analytical Laboratories of Lenexa, Kansas. The samples were analyzed for benzene, toluene, ethylbenzene, xylenes, total petroleum hydrocarbons—gasoline range organics, total petroleum hydrocarbons – diesel range organics, and chloride. Groundwater samples collected from MW-1, MW-2, and MW-3 were reported by the laboratory to be above the New Mexico Water Quality Control Commission's groundwater quality standards during both monitoring events.

# 1. Introduction

GHD Services Inc. (GHD) prepared this 2021 Groundwater Monitoring Report on behalf of Phillips 66 Company (Phillips 66). This report summarizes groundwater monitoring and sampling, activities at East Hobbs Junction (Site) in March and September 2021. The report presents the following:

- Site Description and History
- Regulatory Framework
- Groundwater Monitoring and Sampling
- Summary and Recommendations

# 2. Site Description and History

The Site is located in Lea County, New Mexico (Section 08, Township 19S, Range 38E; Figure 1). Site remedial activities began in January 2000, following the discovery of a release of crude oil from a gathering line at the East Hobbs Junction. The property on which the release occurred is largely undeveloped arid land.

On March 23, 1999, Phillips 66 personnel discovered a release of unrefined petroleum products (crude oil) associated with a local well field gathering pipeline system located near the town of Hobbs, New Mexico. The area consists of several gathering lines which meet in one locality. The failed line was a 6-inch diameter line which was not in service but was open to the main line. The line leak was noted by the evidence of oil impacts on the ground surface in the area of the release. The quantity of crude oil released was not known. Phillips 66 excavated approximately 200 cubic yards of petroleum impacted soil from around and below the release location. The limits of the excavation were approximately 10 feet wide by 60 feet long and averaged approximately 6 to 8 feet deep with the deepest extent around 12 feet. Excavation activities were halted because of other active petroleum pipelines present in the area. Three groundwater monitor wells were then installed and approximately 3 feet of crude oil was detected on the water table in each monitor well.

Assessment activities have been conducted at the Site to define the crude oil impacts, and a soil and groundwater remediation system was installed to address the impacts. The remediation system installation consisted of soil vapor extraction (SVE), air sparge (AS), and light non aqueous phase liquid (LNAPL) recovery. Figure 2 illustrates the locations of the existing pipeline corridors, the Site monitor and remediation wells, the remediation buildings and storage tank at the Site. Higgins and Associates, L.L.C. of Centennial, Colorado performed the installation of the remediation system, initial startup, O&M and required monitoring activities until September 2003. In September 2003, Tetra Tech assumed responsibility for the remedial oversight duties at the Site. On August 5, 2008, the SVE and AS systems were converted into a bioventing system utilizing electronic timers to cycle the periods of operation to promote oxygen enhancement in the vadose zone to encourage biodegradation. The skimmer pumps have been removed from all monitor wells except MW 2 and MW 9.

In August 2011, GHD (formerly Conestoga Rovers and Associates) was retained as the environmental consultant for the Site by Phillips 66. Periodic O&M of the remediation system was performed until the skimming operations were shut down in 2014 due to mechanical problems.

Remedial activities continued in 2015 with the use of mobile dual phase extraction (MDPE) to remove residual LNAPL to the extent practical. MDPE events were conducted in 2015 in March, April, July, and November.

Additional MDPE events were conducted in 2017 in February, April, and June. GHD evaluated the MDPE data collected at the Site and determined that the LNAPL recovery rate reduced from approximately 1% in 2015 to approximately 0.3% in the first half of 2017. In order to enhance the recovery rate, GHD performed a pilot test utilizing Ivey sol Surfactant Enhanced Remediation (SER) to remove absorbed LNAPL near the release area.

On December 5, 2017, GHD gravity-fed 200 gallons of surfactant into both MW-1 and RW-2, and AcuVac initiated MDPE approximately three hours after the injection. An additional Ivey-Sol SER injection and MDPE recovery event was performed on December 6, 2017. A total of 1,702 gallons of total fluids and an immeasurable amount of LNAPL were recovered during a 7-hour period.

A Cool-Ox® injection event was performed in May 2018. GHD and Deep Earth Technologies, Inc. (DTI) injected Cool-Ox®, which is a patented solution of calcium peroxide that generates hydrogen peroxide slowly and facilitates the oxidation of petroleum hydrocarbons. Cool-Ox® was injected directly into the MW-1, MW-2, MW-3, MW-7, MW-9, MW-10 and AS wells SP-1, SP-2, SP-7 and SP-8. A total of 7,100 gallons of Cool-Ox® were injected over a 4-day period. Following the injections of Cool-Ox®, LNAPL was not observed until December 2019 following a drop in the water table.

## 3. Regulatory Framework

The New Mexico Oil Conservation Division (NMOCD) is the regulatory agency overseeing the cleanup of petroleum hydrocarbon impacts associated with the Site. The NMOCD uses groundwater quality standards contained in Title 20, Chapter 6, Part 2, Section 3103 of the New Mexico Administrative Code (20.6.2.3103 NMAC<sup>1</sup>) for groundwater cleanup.

The New Mexico Water Quality Control Commission (NMWQCC) Human Health Standards are listed in the following Constituents of Concern Table for comparison purposes and evaluation of groundwater analytical results contained in this report.

As of December 2018, NMWQCC updated the Human Health Standards; however, due to the timing of the sampling, the previous standards were used for this reporting period. Moving forward, the revised standards will be used.

Constituent Of Concern	NMWQCC Standards (mg/L)
Benzene	0.005
Toluene	1.00
Ethylbenzene	0.70
Xylenes	0.62
TPH-DRO	NA
TPH-GRO	NA
Chloride	250

TPH DRO – Total Petroleum Hydrocarbons Diesel Range Organics

TPH GRO – Total Petroleum Hydrocarbons Gasoline Range Organics

## 4. Groundwater Monitoring and Sampling

### 4.1 Groundwater Monitoring – March 2021

GHD personnel gauged 28 on-site monitor wells on March 15, 2021 to measure groundwater elevation. Well caps were removed before gauging to allow groundwater levels to equilibrate. An oil/water interface probe was used to measure groundwater depths and check for the presence of LNAPL in each of the monitor wells. Groundwater measurements proceeded from clean wells to the wells containing LNAPL to minimize the potential for cross

<sup>1</sup> New Mexico Water Quality Control Commission (<http://www.nmcpr.state.nm.us/nmac/partstitle20/20.006.0002.htm>)

contamination between wells. The oil/water interface probe was cleaned with an Alconox®/de ionized water solution and rinsed with de ionized water after each use.

Well caps were removed before gauging to allow groundwater levels to equilibrate. MW-4 (SVE-1), MW-5 (SVE-2), MW-7 (RW-5), MW-10 (RW-6), MW-11 (RW-7), MW-13, MW-14 (SVE-11), MW-15 (SVE-12), MW-16, MW-17, MW-18 (SVE-13), MW-19, MW-20, MW-21, MW-23, and SVE-10 were all measured dry. LNAPL was measured in MW-9 (RW-2) with a thickness of 1.63 feet. Groundwater elevations ranged from 3571.95 ft amsl at MW-12 (SVE-9) to 3576.31 ft amsl at MW-8 (SVE-5). The groundwater flow direction as measured from Site wells was to the south-southeast at a gradient of approximately 0.007 ft/ft and is generally consistent with historical data.

Table 1 presents the Groundwater Elevation Data. Figure 3 presents Groundwater Gradient Map – March 2021.

## 4.2 Groundwater Sampling – March 2021

GHD personnel collected samples for the first semi-annual 2021 groundwater sampling event from 10 on-site monitor wells on March 16 and 17, 2021. Groundwater samples were collected from MW-1, MW-2, MW-3, MW-6, MW-8, MW-12, and MW-24 through MW-27. MW-9 (RW-2) was not sampled due to the presence of LNAPL.

Samples were collected via traditional bailer method. Field parameters including pH, temp, conductivity were collected during the purging of monitor wells. The groundwater samples, including a duplicate sample, were collected with clean, disposable bailers, decanted into clean containers supplied by the analytical laboratory, placed on ice in an insulated cooler, and chilled to a temperature of approximately 40°F (4°C). The coolers were sealed for transport and shipped to Pace under chain of custody protocol. Groundwater not used for sampling is stored on-site in a 140-barrel above ground storage tank, for off-site disposal.

Pace analyzed the groundwater samples for:

- BTEX by EPA Method 8260B
- TPH-GRO by EPA Method 8015B
- TPH-DRO by EPA Method 8015B
- Chloride by EPA Method 300

## 4.3 Groundwater Analytical Results – March 2021

Sample results for the March 2021 semiannual groundwater monitoring events are summarized below.

- Benzene was detected above the groundwater remedial objective of 0.005 mg/L in groundwater samples collected at MW-1, MW-2, MW-3, and the duplicate sample collected at MW-3 at concentrations of 0.097 mg/L, 0.047 mg/L, 0.010 mg/L and 0.011 mg/L, respectively. Benzene was not detected above the remedial objective in the remaining monitor wells.
- Toluene was not detected above the groundwater remedial objective of 1.00 mg/L in groundwater samples collected during the March 2021 sampling event.
- Ethylbenzene was not detected above the groundwater remedial objective of 0.70 mg/L in groundwater samples collected during the March 2021 sampling event.
- Total xylenes were not detected above the groundwater remedial objective of 0.62 mg/L in groundwater samples collected during the March 2021 sampling event.
- TPH-GRO was detected above the laboratory detection limit in groundwater samples MW-1 and MW-2 with concentrations of 1.2 mg/L and 0.80 mg/L, respectively. Groundwater remedial objectives for TPH-GRO have not been established for the Site.
- TPH-DRO was detected above the laboratory detection limit in groundwater samples MW-1, MW-2, MW-3, MW-6, and MW-8. The highest concentration of TPH DRO was reported as 10.8 mg/L in MW 8. Groundwater remedial objectives for TPH DRO have not been established for the Site.

- Chloride was not detected above the groundwater remedial objective of 250 mg/L in any groundwater samples collected during the March 2021 sampling event.

Table 2 presents Groundwater Analytical Data – BTEX, TPH GRO and TPH DRO and Table 3 presents Groundwater Analytical Data – Inorganics. Figure 4 presents Groundwater Analytical Results – Organics – March 2021; Figure 5 presents Groundwater Analytical Results – Inorganics – March 2021. The Pace analytical reports are presented as Appendix A.

## 4.4 Groundwater Monitoring – September 2021

GHD personnel gauged 28 on site monitor wells on September 13, 14 and 15, 2021 to measure groundwater elevation. Well caps were removed before gauging to allow groundwater levels to equilibrate. An oil/water interface probe was used to measure groundwater depths and check for the presence of LNAPL in each of the monitor wells. Groundwater measurements proceeded from clean wells to the wells containing LNAPL to minimize the potential for cross contamination between wells. The oil/water interface probe was cleaned with an Alconox®/de ionized water solution and rinsed with de ionized water after each use.

Monitor wells at MW-4 (SVE-1), MW-5 (SVE-2), MW-7 (RW-5), MW-10 (RW-6), MW-11 (RW-7), MW-13 through MW-23 were all measured dry. LNAPL was measured in MW-9 (RW-2) with a thickness of at least 1.27 feet due to groundwater not being encountered in the monitor well. Groundwater elevations ranged from 3571.40 feet above mean sea level (ft amsl) at MW-12 (SVE-9) to 3577.51 ft amsl at SVE-10. The groundwater flow direction as measured from Site wells was to the south-southeast at a gradient of approximately 0.007 ft/ft and is generally consistent with historical data.

Table 1 presents the Groundwater Elevation Data. Figure 6 presents Groundwater Gradient Map – September 2021.

## 4.5 Groundwater Sampling – September 2021

GHD personnel collected samples for the second semi-annual 2021 groundwater sampling event from 8 on site monitor wells on September 14 and 15, 2021. Groundwater samples were collected from MW-1, MW-2, MW-3, MW-8, and MW-24 through MW-27. MW-9 was not sampled due to the presence of LNAPL.

Samples were collected via traditional bailer method. Field parameters including pH, temp, conductivity were collected during the purging of monitor wells. The groundwater samples, including duplicate samples, were collected with clean, disposable bailers, decanted into clean containers supplied by the analytical laboratory, placed on ice in an insulated cooler, and chilled to a temperature of approximately 40°F (4°C). The coolers were sealed for transport and shipped to Pace Analytical Services (Pace) in Lenexa, Kansas under chain of custody protocol. Purge water is stored on-site in a 140-barrel above ground storage tank, for off-site disposal.

Pace analyzed the groundwater samples for:

- Benzene, toluene, ethylbenzene, and xylenes (BTEX) by EPA Method 8260B
- TPH-GRO by EPA Method 8015B
- TPH-DRO by EPA Method 8015B
- Chloride by EPA Method 300

## 4.6 Groundwater Analytical Results – September 2021

Sample results for the September 2021 semiannual groundwater monitoring event are summarized below.

- Benzene was detected at concentrations above the groundwater remedial objective of 0.005 mg/L in MW-1, MW-2, MW-3 and the duplicate sample collected at MW-1 at concentrations of 0.12 mg/L, 0.048 mg/L, 0.012 mg/L, and 0.12 mg/L, respectively. Benzene was not detected above the remedial objective in the remaining monitor wells.

- Toluene was not detected above the groundwater remedial objective of 1.00 mg/L in groundwater samples collected during the September 2021 sampling event.
- Ethylbenzene was not detected above the groundwater remedial objective of 0.70 mg/L in groundwater samples collected during the September 2021 sampling event.
- Total xylenes were not detected above the groundwater remedial objective of 0.62 mg/L in groundwater samples collected during the September 2021 sampling event.
- TPH-GRO was detected above the laboratory detection limit in groundwater samples MW-1, MW-2, and the duplicate sample taken at MW-1. The highest concentration of TPH-GRO was reported as 0.96 mg/L in the duplicate sample taken at MW-1. Groundwater remedial objectives for TPH-GRO have not been established for the Site.
- TPH-DRO was detected above the laboratory detection limit in groundwater samples MW-1, MW-2, MW-3, MW-8, and the duplicate sample taken at MW-1. The highest concentration of TPH-DRO was reported as 9.9 mg/L in the duplicate sample taken at MW-1. Groundwater remedial objectives for TPH-DRO have not been established for the Site.
- Chloride was not detected above the groundwater remedial objective of 250 mg/L in any of the wells sampled during the September 2021 event.

Table 2 presents Groundwater Analytical Data – BTEX, TPH GRO and TPH DRO; Table 3 Groundwater Analytical Data – Inorganics. Figure 7 presents Groundwater Analytical Results – Organics – September 2021; Figure 8 presents Groundwater Analytical Results – Inorganics – September 2021. The Pace analytical reports are presented as Appendix A.

## 5. Summary and Recommendations

Removal of LNAPL and dissolved BTEX, TPH-GRO, TPH-DRO and chloride remain the remedial objective for this Site. Groundwater data collected in March and September 2021 from MW-1, MW-2, and MW-3 continue to indicate exceedance of the NMWQCC standards. LNAPL thickness in MW-9 continues to increase as the water table decreases.

GHD and P66 would like to request that chloride be removed from monitoring requirements since there are a significant number of data consistently below the standard other than one anomaly from MW-24 in September 2020 (257 mg/l).

GHD plans to submit a revised Cool-Ox work plan in the first quarter of 2022 to address the benzene exceedances and recalcitrant LNAPL in MW-9 (RW-2). Upon NMOCD approval, approximately 6,500 gallons of Cool-Ox will be injected in remediation wells RW-1, RW-3, and newly installed remediation wells RW-8 through RW-16.

Following injections, GHD will continue conducting groundwater monitoring on a quarterly basis and reporting on an annual basis for the Site, as directed by the NMOCD.

All of which is Respectfully Submitted,

GHD

MW-27	09/14/21	3604.99	--	32.56	--	3572.43

Notes:

1. ft-amsl = feet - above mean sea level
2. LNAPL = Light Non-Aqueous Phase Liquid
3. ft-btoc = feet below top of casing
4. ft = feet
5. -- = not detected
6. DRY = well dry upon gauging
6. Corrected Groundwater Elevation = Top of Casing - (Depth To Water - (0.78 x LNAPL Thickness))

Notes:

mg/L = milligrams per liter

ne = not established

&lt; = Analyte was detected below the laboratory detection limit

TPH-GRO = Total Petroleum Hydrocarbons - Gasoline Range Organics

TPH-DRO = Total Petroleum Hydrocarbons - Diesel Range Organics

NMWQCC = New Mexico Water Quality Control Commission

Shaded/bolded values exceed their respective NMWQCC Standard for Groundwater.

J Value = Laboratory Detection Limit &lt; Analyte Result &lt; Laboratory Reporting Limit

Suite 800  
Golden, CO 80401

RE: Project: 11225838 P66-AOC 3373 E. HOBBS  
Pace Project No.: 60364010

Dear David Bonga:

Enclosed are the analytical results for sample(s) received by the laboratory on March 17, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Kansas City

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that appears to read "Jamie Church".

## QUALIFIERS

Project: 11225838 P66-AOC 3373 E. HOBBS  
 Pace Project No.: 60364010

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.  
 ND - Not Detected at or above adjusted reporting limit.  
 TNTC - Too Numerous To Count  
 J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.  
 MDL - Adjusted Method Detection Limit.  
 PQL - Practical Quantitation Limit.  
 RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.  
 S - Surrogate  
 1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.  
 Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.  
 LCS(D) - Laboratory Control Sample (Duplicate)  
 MS(D) - Matrix Spike (Duplicate)  
 DUP - Sample Duplicate  
 RPD - Relative Percent Difference  
 NC - Not Calculable.  
 SG - Silica Gel - Clean-Up  
 U - Indicates the compound was analyzed for, but not detected.  
 N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.  
 Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.  
 TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
R1	RPD value was outside control limits.
RS	The RPD value in one of the constituent analytes was outside the control limits.
pH	Post-analysis pH measurement indicates insufficient VOA sample preservation.

RE: Project: 11225838 P66-AOC 3373 E. HOBBS  
Pace Project No.: 60364226

Dear David Bonga:

Enclosed are the analytical results for sample(s) received by the laboratory on March 18, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Kansas City

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Jamie Church".

Jamie Church

## QUALIFIERS

Project: 11225838 P66-AOC 3373 E. HOBBS  
 Pace Project No.: 60364226

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.  
 ND - Not Detected at or above adjusted reporting limit.  
 TNTC - Too Numerous To Count  
 J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.  
 MDL - Adjusted Method Detection Limit.  
 PQL - Practical Quantitation Limit.  
 RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.  
 S - Surrogate  
 1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.  
 Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.  
 LCS(D) - Laboratory Control Sample (Duplicate)  
 MS(D) - Matrix Spike (Duplicate)  
 DUP - Sample Duplicate  
 RPD - Relative Percent Difference  
 NC - Not Calculable.  
 SG - Silica Gel - Clean-Up  
 U - Indicates the compound was analyzed for, but not detected.  
 N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.  
 Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.  
 TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
pH	Post-analysis pH measurement indicates insufficient VOA sample preservation.

RE: Project: 11226568 E. Hobbs Junction  
Pace Project No.: 60380544

Dear David Bonga:

Enclosed are the analytical results for sample(s) received by the laboratory on September 16, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Kansas City

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Jamie Church".

Jamie Church

## QUALIFIERS

Project: 11226568 E. Hobbs Junction  
 Pace Project No.: 60380544

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.  
 ND - Not Detected at or above adjusted reporting limit.  
 TNTC - Too Numerous To Count  
 J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.  
 MDL - Adjusted Method Detection Limit.  
 PQL - Practical Quantitation Limit.  
 RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.  
 S - Surrogate  
 1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.  
 Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.  
 LCS(D) - Laboratory Control Sample (Duplicate)  
 MS(D) - Matrix Spike (Duplicate)  
 DUP - Sample Duplicate  
 RPD - Relative Percent Difference  
 NC - Not Calculable.  
 SG - Silica Gel - Clean-Up  
 U - Indicates the compound was analyzed for, but not detected.  
 N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.  
 Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.  
 Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.  
 TNI - The NELAC Institute.

### BATCH QUALIFIERS

Batch: 745121

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

### ANALYTE QUALIFIERS

CL	The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased low.
H1	Analysis conducted outside the EPA method holding time.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
pH	Post-analysis pH measurement indicates insufficient VOA sample preservation.
