Good Morning,

The freestanding fluid that you see in the photos of the secondary containment is rainwater. The area had 2 separate rain events back-to-back days a few days prior to conducting the liner inspection.

Please let me know if you have any additional questions.

Subject: Liner Inspection - COG - Tomahawk Federal 20 O CTB - (NAPP2301249641)

Conner,

I was reviewing the Closure Report (liner inspection) for the Tomahawk Federal 20 O CTB incident (NAPP2301249641). There is quite a bit of fluid in the secondary containment in the pictures in the report. The report says, "A vacuum truck was dispatched to remove all freestanding fluids". Was there a large rain event during the liner inspection? Just trying to figure out why there is so much fluid in the secondary containment. Any explanation would be helpful. Thanks
