UPSET FLARING EVENT SPECIFIC JUSTIFICATIONS FORM**Facility:** Lost Tank 18 CPF**Flare Date:** 03/29/2024**Duration of Event:** 3 Hours 40 Minutes**MCF Flared:** 136**Start Time:** 12:10 AM**End Time:** 03:50 AM**Cause:** Emergency Flare > Well Surges**Method of Flared Gas Measurement:** Gas Flare Meter

1. Reason why this event was beyond Operator's control:

In this case, when field personnel began bringing wells back online after an MPLX Gas Plant gas curtailment from the previous night, several wells flowing to the facility began surging more gas, sporadically, which in turn overwhelmed the facility's compression equipment, which then caused several intermittent flaring instances to occur. This type of flaring is unforeseeable and unanticipated as wells surge from time to time, which are out of OXY's control to avoid or prevent from happening, yet OXY made every effort to control and minimize emissions as much as possible. OXY routed all the stranded sales gas to a flare with a 98% combustion efficiency to minimize emissions as much as possible.

2. Steps Taken to limit duration and magnitude of venting or flaring:

In this case, when field personnel began bringing wells back online after an MPLX Gas Plant gas curtailment from the previous night, several wells flowing to the facility began surging more gas, sporadically, which in turn overwhelmed the facility's compression equipment, which then caused several intermittent flaring instances to occur. Steps were immediately taken by Oxy on-site personnel to reduce and mitigate the volume of gas being sent to flare by reducing production to the Lost Tank 18 CPF by re-choking high GOR wells. OXY routed all the stranded sales gas to a flare with a 98% combustion efficiency to minimize emissions as much as possible. This type of flaring is unforeseeable and unanticipated as wells surge from time to time, which are out of OXY's control to avoid or prevent from happening, yet OXY made every effort to control and minimize emissions as much as possible.

3. Corrective Actions taken to eliminate the cause and reoccurrence of venting or flaring:

This flaring event was unforeseeable and unanticipated as wells surge from time to time, which is out of OXY's control to avoid or prevent from happening. OXY made every effort to control and minimize emissions as much as possible. Adjustments to facility compression equipment compression were made during each occurrence of a well surges and several wells were adjusted to cut back so that each instance of intermittent flaring was minimal.
