RELEASE, WAIVER OF CLAIMS AND COVENANT NOT TO SUE

This Release, Waiver of Claims and Covenant Not to Sue (the "Release") is entered into between **Irvin Boyd** (the "Landowner") and **Versado Gas Processors, L.L.C.** and its past and present parent companies, affiliates and subsidiaries, representatives, agents, employees, contractors, insurers, attorneys, predecessors, successors in interest or other legal entities for which it may be legally responsible or who may be responsible for its acts or omissions (collectively, "Targa") and is dated April 4, 2024 (the "Effective Date").

WHEREAS, Landowner is the owner of certain property located in **Section 11, T22S, R37E, Lea County, New Mexico (the "Lands");** and

WHEREAS Targa and Landowner have agreed to a settlement pertaining to damages related to an oil and/or gas leak in and around the area generally described and depicted in the Exhibit A attached hereto (the "Affected Area").

NOW THEREFORE, for and in consideration of the sum of [redacted] and other valuable consideration, due on or before April 19, 2024, the receipt of which is hereby acknowledged by Landowner, Landowner does hereby, on his behalf and on behalf of all of his heirs, executors, successors, administrators and assigns, WAIVE, RELEASE, AND FOREVER COMPROMISE AND DISCHARGE, Targa of and from any and all past and present claims, demands, obligations, actions, causes of action, rights, damages, costs, loss of services, expenses and compensation of any nature whatsoever, whether based on a tort, contract, statutory or non-statutory lien, or other theory of recovery, whether for compensatory, punitive, or statutory damages, which Landowner now has or may otherwise have accrued as of the date of this Release pertaining to contamination and/or environmental damage of the Affected Area, as well as the existence of surface damages related to prior remediation efforts in the Affected Area which Landowner acknowledges will be left in its current state, except as otherwise agreed herein. The Release extends only to damages in the Affected Area that have accrued as of the date of the Release. This release does not apply to any liability for future leaks in the Affected Area first arising after the date of the Release or to any liability outside of the Affected Area.

Landowner agrees and stipulates that Targa has sufficiently remediated the Affected Area to Landowner's satisfaction based on the known previous contamination, which includes leaving the excavation currently within the Affected Area in its current state. In lieu of further remediation and/or reclamation of the Affected Area, Landowner and Targa agree as follows:

1. This Release shall be deemed to be a full satisfaction of any accrued obligation of Targa to pay for or otherwise remediate further any damages or impacts to Landowner caused by Targa, its agents, employees, contractors and sub-contractors to the Affected Area.

2. Landowner expressly acknowledges that Targa will cease all further remediation activities in the Affected Area. The currently excavated sites or areas will not be filled in further, with the exception that (a) Targa shall slope the excavated area at no greater than a 34° angle to allow for safe movement of cattle and persons and (b) Targa shall fence the Northern side of the excavated area with stable and well-balanced fence posts and 5-wire

barbed fencing to the reasonable satisfaction of Landowner in an effort to, as best as reasonably practicable, warn/prevent traffic from entering the excavated area.

3. Targa shall reroute and bury its existing pipeline at least four feet below ground and outside of (but within 50 feet of) the Affected Area.

This Release shall inure to the benefit of Targa's current and former officers, directors, shareholders, employees, agents, attorneys, insurers, parent companies, subsidiaries, affiliates, divisions, predecessors, and successors and assigns, each of whom are a released party.

Targa remains responsible and liable for the sufficiency and scope of the remediation. Accordingly, Targa assumes full responsibility for, and agrees to defend, indemnify, protect and hold harmless Landowner from and against all loss, liability, claims, fines, expenses, costs (including reasonable attorney's fees and expenses), and causes of action asserted or claimed by any third party (provided such third party is unrelated/unaffiliated with Landowner in any way) or governmental entity arising out of the presence, disposal, release, or threatened release of any waste material, hazardous substance, or other regulated substances onto the Lands which are (a) attributable or related to Targa's operations upon the Lands or (b) are a result of the actions or omissions of Targa's officers, employees, contractors or agents in furtherance of Targa's operations upon the Lands.

This Release is effective only upon Landowner's receipt of the Settlement Payment in good funds.

This Release sets forth the entire agreement between the parties with respect to the matters reflected herein. Landowner represents and warrants that he has not sold, assigned, conveyed, pledged or in any way transferred to any person or entity an interest in the claims or items referenced in this Release.

In executing this release and accepting the settlement sum referenced herein, Landowner, his heirs, executors, successors, administrators and assigns further agrees not to initiate, participate in, file or assert any cause of action, judicial proceeding, lawsuit, claim or demand, whether common law, statutory, federal, legal, or equitable, on the claims released herein.

This Release is not intended to and does not affect whatever rights the NMOCD may have or has pertaining to reclamation or remediation of the Affected Area. Landowner has no control if the NMOCD deems it necessary to bring any further claims or causes of action directly against Targa as a result of this pipeline leak. However, in such circumstance, Landowner agrees not to join such NMOCD action or seek additional compensation or relief, directly or indirectly, through or resulting from an NMOCD action. Moreover, Landowner agrees not to pursue any further damages, clean-up or remediation for previous leaks in the Affected Area.

This Release may be executed in duplicate originals, all of which taken together shall constitute one and the same document, and signatures sent by facsimile or email shall be binding upon the Parties hereto.

Please indicate your acknowledgement by signing in the space provided below.

Agreed and accepted this 4th day of April, 2024.

RE: **Site Characterization Report and Remediation Closure Request**
Targa Midstream Services, LLC
Drinkard 20-Inch
UL M, Sec. 11, T22S, R37E
NMOCD No. nRM2022555694

Etech Environmental & Safety Solutions (Etech), on behalf of Targa Midstream Services, LLC (Targa), has prepared this *Site Characterization Report and Remediation Closure Request* for the site known as the Drinkard 20-Inch (henceforth, "Site"). The Site is located approximately 2.5 miles southeast of Eunice, New Mexico, in Unit Letter "M", Section 11, Township 22 South, Range 37 East. Additional details are summarized below:

Location of Release Source

Latitude: 32.40164 Longitude: -103.13854
Provided GPS are in WGS84 format:

Site Name:	Drinkard 20-Inch	Site Type:	Pipeline
Date Release Discovered:	7/22/2020	API # (if applicable):	N/A

Unit Letter	Section	Township	Range	County
M	11	22S	37E	Lea

Surface Owner ☐ State ☐ Federal ☐ Tribal ☒ Private (Name Irvin Boyd)

A Topographic Map is provided as Attachment #1.

RELEASE DETAILS

On July 22, 2020, Targa discovered a release from their Drinkard 20-Inch buried steel pipeline. The initial NMOCD Release and Corrective Action (NMOCD Form C-141) indicated that external corrosion resulted in the development of a pinhole. The release affected a total area of the pipeline right-of-way (ROW) and adjacent pasture measuring approximately 10,109 square feet. Based on the calculated release volumes it was estimated that approximately 43.5 barrels (bbls) of produced water, 4.8 bbls of condensate and 7.59 Mcf of natural gas were released. During initial response activities, the source of the release was stopped, and wet/visibly stained soil was immediately excavated to mitigate the extent of the release. Upon completion of initial response activities, the damaged section of pipeline was replaced.

SITE CHARACTERIZATION

A search of groundwater databases maintained by the New Mexico Office of the State Engineer (NMOSE) and United States Geological Survey (USGS) was conducted in an effort to determine the horizontal distance to known water sources within a half-mile radius of the release site. Additional NMOCD Siting Criteria data was gathered from available resources, including Bureau of Land Management (BLM) shapefiles; topographic maps; NMOCD, NMOSE and USGS databases; and aerial imagery.

What is the shallowest depth to groundwater beneath the area affected by the release in feet below ground surface (ft. bgs)?	99.6 (ft.)
What method was used to determine the depth to groundwater?	Direct Measurement
Did the release impact groundwater or surface water?	No

What is the minimum distance, between the closest lateral extents of the release and the following surface areas:

A continuously flowing watercourse or any other significant watercourse?	1 to 5 (Mi)
Any lakebed, sinkhole, or playa lake (measured from the ordinary high-water mark)?	1 to 5 (Mi)
An occupied permanent residence, school, hospital, institution, or church?	1 to 5 (Mi)
A spring or a private domestic fresh water well used by less than five households for domestic or stock watering purposes?	½ to 1 (Mi)
Any other fresh water well or spring?	½ to 1 (Mi)
Incorporated municipal boundaries or a defined municipal fresh water well field?	1 to 5 (Mi)
A wetland?	½ to 1 (Mi)
A subsurface mine?	> 5 (Mi)
An (non-karst) unstable area?	½ to 1 (Mi)
A 100-year floodplain?	> 5 (Mi)
Categorize the risk of this well / site being in a karst geology:	Low
Did the release impact areas not on an exploration, development, production, or storage site?	Yes

NMOCD Siting Criteria and Electronic C-141 Supplemental Documentation is provided as Attachment #8.

CLOSURE CRITERIA

Based on the volume and nature of the release, depth to groundwater, and NMOCD Siting Criteria, the NMOCD Closure Criteria and NMOCD Reclamation Standard for the Site are as follows:

Probable Depth to Groundwater	Constituent	Laboratory Analytical Method	Closure Criteria*†	Reclamation Standard*‡
75-100 Feet	Chloride (Cl-)	EPA 300.0 or SM4500 Cl B	10,000	600
	Total Petroleum Hydrocarbons (TPH)	EPA SW-846 Method 8015M Ext	2,500	100
	Gas Range Organics + Diesel Range Organics (GRO + DRO)	EPA SW-846 Method 8015M	1,000	-
	Benzene	EPA SW-846 Methods 8021b	10	10
	Benzene, Toluene, Ethylbenzene, Total Xylenes (BTEX)	EPA SW-846 Methods 8021b	50	50

* Measured in milligrams per kilogram (mg/kg)

† Table I, Section 19.15.29.12 of the New Mexico Administrative Code (NMAC).

‡ The NMOCD Reclamation Standard applies only to the top 4' of soil in non-production areas. Section 19.15.29.13 D.(1) NMAC.

BACKGROUND SUMMARY

On July 22, 2020, remediation activities commenced at the Site. The floor and sidewalls of the excavated area were advanced until field observations and test results suggested concentrations of benzene, toluene, ethylene and total xylenes (BTEX), total petroleum hydrocarbons (TPH) and chloride were below the NMOCD Closure Criteria and conditions set forth by the landowner. Between July 22, 2020, and January 13, 2021, Etech oversaw the excavation and removal of approximately 11,288 cubic yards of affected soil from an excavation measuring approximately 250 feet (ft.) in length, 30 to 145 ft. in width and 4 to 19 ft. in depth. During the advancement of the excavation and installation of the investigative trenches, it became evident that third-party historical impacts were present at the Site, which contributed to increased size of the final excavation and associated soil volumes.

While researching potential sources for historical impacts, several historical groundwater remediation sites were discovered in the vicinity indicating the presence of regional groundwater impacts that pre-dated the Drinkard 20-Inch release. Laboratory analytical results were originally compared to the NMOCD's most stringent Table 1 Closure Criteria. Upon determining that (1) groundwater was greater than 45 ft. bgs, (2) deeper impacts were unrelated to the subject release, (3) that regional groundwater quality was already impaired and (4) that further excavation was impracticable and posed an unnecessary safety risk, the analytical data was compared to the Table 1 Closure Criteria for Sites where groundwater is non-abatable, or greater than 50 ft. bgs.

Upon determining that laboratory analytical results from excavation confirmation and delineation soil samples confirmed BTEX, TPH and chloride concentrations were below the Table 1 Closure Criteria for Sites where groundwater is non-abatable, or greater than 50 ft. bgs, a *Remediation Summary & Backfill Request* was prepared detailing remediation activities conducted to date and laboratory analytical results from confirmation soil samples along with trenching data demonstrating groundwater was greater than 45 ft. bgs. On June 24, 2022, the *Remediation Summary & Backfill Request* was approved by the NMOCD with the condition that impacted soils would need to meet Table 1 Closure Criteria for sites where groundwater is 50 ft. or less and that the OCD would not close a release where contaminants were left in place. A copy of the *Remediation Summary & Backfill Request,* dated April 29, 2021, is provided at Attachment #4.

CONFIRMATION SOIL SAMPLING SUMMARY

Between September 15, 2020, and January 13, 2021, Etech collected 182 confirmation soil samples from the floor and sidewalls of the excavated area. In addition, eight (8) soil samples were collected from five (5) investigative test trenches at depths up to 45 ft. bgs.

Laboratory analytical results from final excavation confirmation soil samples indicated benzene, BTEX, TPH and chloride concentrations were below the applicable NMOCD Closure Criteria and NMOCD Reclamation Standards in each of the submitted soil samples. The highest observable concentrations of benzene, BTEX, TPH, GRO+DRO and chloride concentrations encountered during the course of remediation activities is detailed below:

Constituent	Highest Observable Concentration	Sample ID	Sample Date	Sample Depth	Soil Status	Resample ID:
Benzene	0.0365	LFS7	9/15/2020	14 ft	Excavated	LFS7b
BTEX	1.47	LFS6	9/15/2020	14 ft	Excavated	LFS6b
TPH	6,580	LNEW3	9/15/2020	4-14 ft	Excavated	LNEW3b
GRO+DRO	6,140	LNEW3	9/15/2020	4-14 ft	Excavated	LNEW3b
Chloride	9,780	LSWW1	9/15/2020	4-14 ft	In-Situ	N/A

Impacted material affected above the NMOCD Closure Criteria, including but not limited to those with the highest observable concentrations, was excavated and transported to an NMOCD-permitted surface waste facility as necessary. A "Site & Sample Location Map" is provided as Attachment #2. A "Soil Chemistry Table" is provided as Attachment #3. Laboratory analytical reports are provided as Attachment #7.

NMOCD CORRESPONDENCE

On April 29, 2021, Targa submitted the *Remediation Summary & Backfill Request* to the NMOCD. The *Remediation Summary & Backfill Request* described that groundwater was greater than 45 ft. bgs along with the likelihood that non-abatable groundwater was present in the vicinity of the Site and requested permission to backfill the Site based on laboratory analytical results from confirmation soil samples meeting the Table 1 Closure Criteria for Sites where groundwater is non-abatable, or greater than 50 ft. bgs. The *Remediation Summary & Backfill Request* was subsequently denied citing "Depth to groundwater has been indicated as 45 bgs, impacted soils will need to meet Table 1 Closure Criteria for groundwater at a depth of 50 feet or less".

On August 30, 2021, the NMOCD requested that test trenches TT#1 and TT#2 be advanced an additional 5 ft. from their previous depth and that samples be collected. In accordance with the NMOCD, on September 1, 2021, Etech collected two (2) additional soil samples (TT-1 @ 35' and TT-2 @ 25') at the Site. The collected soil samples were submitted to the laboratory for analysis of BTEX, TPH and chloride concentrations. Laboratory analytical results indicated BTEX and TPH concentrations were below the laboratory method detection limit (MDL) in each of the submitted soil samples. Chloride concentrations were 1,730 mg/kg in soil sample TT-1 @ 35'and 32.0 mg/kg in soil sample TT-2 @ 2 5'.

On September 2, 2021, representatives of Etech, Targa and the NMOCD met to discuss a path forward for the Site. During the meeting, details within the *Remediation Summary & Backfill Request* were discussed along with the analytical results from the recently collected soil samples. The NMOCD requested that Targa install an investigative soil boring/temporary monitoring well east of TT-1.

INVESTIGATIVE DRILLING

On May 5, 2022, upon getting the necessary approvals, Etech oversaw the installation of two (2) air-rotary investigative soil borings/temporary monitoring wells (BH-1 and BH-2) at the Site. In accordance with the NMOCD, investigative soil boring/temporary monitoring well BH-2 was installed east of test trench TT-1. Investigative soil boring/temporary monitoring well BH-1 was installed in an undisturbed area approximately 75 ft. up-gradient from the release site. The investigative soil borings/temporary monitoring wells were installed to a total depth of approximately 103 ft. bgs. During the advancement of the investigative soil borings/temporary monitoring wells, the same thick, dry reddish brown clay unit was encountered at approximately 20 ft bgs that was seen in the on-site test trenches. The thick, dry reddish brown clay unit extended to 98 to 100 ft. bgs. During the advancement of investigative soil boring/temporary monitoring well BH-1, an approximate 6-inch layer of blueish, fine sand was encountered at approximately 100 ft. bgs. before turning into a blueish clay. During the advancement of investigative soil boring/temporary monitoring well BH-2, the same layer of blueish, fine

sand was encountered at approximately 98 ft. bgs. before turning into a blueish clay. No inflow of groundwater was detected during the advancement of the investigative soil borings/temporary monitoring wells. Upon setting a temporary casing in BH-2, gas vapors were observed to be emitting from the investigative soil boring/temporary monitoring well.

On May 6, 2022, Etech returned to the Site to see if investigative soil boring/temporary monitoring well BH-2 was still emitting gas vapors. Upon determining that it was, an air sample (Air Sample #1) was collected in a Tedlar® bag and submitted to a certified commercial laboratory for analysis of methane, carbon dioxide, ethane and propane in accordance with Modified ASTM D-1945 and benzene, toluene, ethylbenzene and total xylenes in accordance with EPA Method TO-15 GC/MS. Laboratory analytical results indicated the collected air sample was 39% methane, 5.4% ethane, 6.8% propane and 0.30% carbon dioxide. Benzene, toluene, ethylbenzene and total xylenes concentrations were non-detect. Upon collecting the air sample, the well was plugged back to approximately 95 ft. bgs using bentonite clay. Upon saturating the bentonite clay, the emission of gas vapors ceased. Based on field observations and laboratory analytical results from the collected air sample, it was inferred that the natural gas was present in the thin blueish sand layer encountered at approximately 98 ft. bgs and was unrelated to the subject release. An “Air Chemistry Table” provided as Attachment #6. Investigative soil boring/temporary monitoring well logs are provided in Attachment #8.

On May 12, 2022, Etech returned to the Site to check for the presence of groundwater in upgradient investigative soil boring/temporary monitoring well BH-1. During the site visit, BH-1 was gauged, and it was determined that measurable water was present at 99.6 ft. bgs; total well depth was determined to be 102.1 bgs. Upon determining that measurable water was present in the upgradient well, the well was bailed dry and allowed to recharge. Once a sufficient volume of water was present, a water sample (BH-1) was collected. The collected water sample was submitted to the laboratory for analysis of BTEX, chloride and total dissolved solids (TDS) concentrations in accordance with SW 846-8021B, SM4500Cl-b and TDS 160.1, respectively. Laboratory analytical results from upgradient temporary monitoring well BH-1 indicated a benzene concentration of 0.003 mg/L, a total BTEX concentration of <0.006 mg/L, a chloride concentration of 700 mg/L and a TDS concentration of 2,120 mg/L. BH-1 is located upgradient and it would appear that impacts would not be from this release, but an off-site source. A “Groundwater Chemistry Table” is provided as Attachment #5.

Field observations from the investigative soil boring advanced at the Site and analytical results from the temporary monitoring well installed upgradient from the release site indicated groundwater beneath the release site is greater than 50 ft. bgs and has been impacted above the New Mexico Water Quality Control Commission (NMWQCC) standards for chloride and TDS by an off-site source, as described in the *Remediation Summary & Backfill Request.* Due to the nature of the temporary completion and the unanticipated presence of shallow gas in the area, the investigative soil boring/temporary monitor wells were plugged and abandoned in an effort to mitigate the risk to human health and the environment associated with the unsecured, open boreholes.

RECENT ACTIVITIES

On December 4, 2023, Targa revisited the remediation site. During the site visit, the floor of the excavation was advanced an additional six (6) inches in the areas characterized by soil samples FS 34 and FS 35 in an effort to ensure that soil affected above the NMOCD Reclamation Standard was not present within the uppermost 4 ft at the Site. Upon advancing the floor of the excavated area an additional six (6) inches, Targa collected two (2) soil samples (FS 34 @ 4.5’ and FS 35 @ 4.5’) from the recently excavated area. The collected soil samples were submitted to the laboratory for analysis of benzene, BTEX, TPH and chloride concentrations. Laboratory analytical results indicated benzene, BTEX and TPH concentrations were below the laboratory MDL in each of the submitted soil samples. Chloride concentrations were 3,120 mg/kg in soil sample FS 34 @ 4.5 and 1,960 mg/kg in soil sample FS 35 @ 4.5’. The approximate 182 cy of excavated material was transported to an NMOCD-permitted surface waste facility for disposal. Disposal manifests are available upon request.

REMEDIATION CLOSURE REQUEST

Remediation activities were conducted in accordance with applicable NMOCD Regulations. Impacted soil affected above the NMOCD Closure Criteria and/or NMOCD Reclamation Standards was excavated and transported to an NMOCD-approved disposal facility. Upon demonstrating that depth to groundwater was over 50 ft. bgs, laboratory analytical results from confirmation soil samples were compared to the applicable Table 1 Closure Criteria, and in-situ concentrations of

BTEX, TPH and chloride were confirmed to be below the applicable NMOCD Closure Criteria and NMOCD Reclamation Standards.

During the course of remediation activities, approximately 11,470 cy of impacted soil was excavated and transported to an NMOCD-approved surface waste facility for disposal. The final dimensions of the excavated area were approximately 250 ft. in length, 30 to 145 in width and 4 to 19 ft. in depth. In accordance with the private landowner, the excavated area has been left open. Targa and the private landowner are in agreement that the excavation will not be backfilled, restored or revegetated. Targa would like to respectfully request that this closure request suffice for the restoration, reclamation and revegetation portions of the C-141. Based on laboratory analytical results and field activities conducted to date, Etech, on behalf of Targa, requests remediation closure be granted to the Drinkard 20-Inch Site.

Respectfully,

Joel Lowry

Application ID	

Site Assessment/Characterization

This information must be provided to the appropriate district office no later than 90 days after the release discovery date.

What is the shallowest depth to groundwater beneath the area affected by the release?	>45 (ft bgs)
Did this release impact groundwater or surface water?	☐ Yes ☑ No
Are the lateral extents of the release within 300 feet of a continuously flowing watercourse or any other significant watercourse?	☐ Yes ☑ No
Are the lateral extents of the release within 200 feet of any lakebed, sinkhole, or playa lake (measured from the ordinary high-water mark)?	☐ Yes ☑ No
Are the lateral extents of the release within 300 feet of an occupied permanent residence, school, hospital, institution, or church?	☐ Yes ☑ No
Are the lateral extents of the release within 500 horizontal feet of a spring or a private domestic fresh water well used by less than five households for domestic or stock watering purposes?	☐ Yes ☑ No
Are the lateral extents of the release within 1000 feet of any other fresh water well or spring?	☐ Yes ☑ No
Are the lateral extents of the release within incorporated municipal boundaries or within a defined municipal fresh water well field?	☐ Yes ☑ No
Are the lateral extents of the release within 300 feet of a wetland?	☐ Yes ☑ No
Are the lateral extents of the release overlying a subsurface mine?	☐ Yes ☑ No
Are the lateral extents of the release overlying an unstable area such as karst geology?	☐ Yes ☑ No
Are the lateral extents of the release within a 100-year floodplain?	☐ Yes ☑ No
Did the release impact areas **not** on an exploration, development, production, or storage site?	☑ Yes ☐ No

Attach a comprehensive report (electronic submittals in .pdf format are preferred) demonstrating the lateral and vertical extents of soil contamination associated with the release have been determined. Refer to 19.15.29.11 NMAC for specifics.

Characterization Report Checklist: ***Each of the following items must be included in the report.***

- ☑ Scaled site map showing impacted area, surface features, subsurface features, delineation points, and monitoring wells.
- ☑ Field data
- ☑ Data table of soil contaminant concentration data
- ☑ Depth to water determination
- ☑ Determination of water sources and significant watercourses within ½-mile of the lateral extents of the release
- ☑ Boring or excavation logs
- ☑ Photographs including date and GIS information
- ☑ Topographic/Aerial maps
- ☑ Laboratory data including chain of custody

If the site characterization report does not include completed efforts at remediation of the release, the report must include a proposed remediation plan. That plan must include the estimated volume of material to be remediated, the proposed remediation technique, proposed sampling plan and methods, anticipated timelines for beginning and completing the remediation. The closure criteria for a release are contained in Table 1 of 19.15.29.12 NMAC, however, use of the table is modified by site- and release-specific parameters.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Remediation Plan

Remediation Plan Checklist: *Each of the following items must be included in the plan.*

- [x] Detailed description of proposed remediation technique
- [x] Scaled sitemap with GPS coordinates showing delineation points
- [x] Estimated volume of material to be remediated
- [x] Closure criteria is to Table 1 specifications subject to 19.15.29.12(C)(4) NMAC
- [x] Proposed schedule for remediation (note if remediation plan timeline is more than 90 days OCD approval is required)

Deferral Requests Only: *Each of the following items must be confirmed as part of any request for deferral of remediation.*

- [ ] Contamination must be in areas immediately under or around production equipment where remediation could cause a major facility deconstruction.
- [ ] Extents of contamination must be fully delineated.
- [ ] Contamination does not cause an imminent risk to human health, the environment, or groundwater.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

1.0 PROJECT INFORMATION

Etech Environmental & Safety Solutions, Inc. (Etech), on behalf of Targa Midstream Services, LLC (Targa), has prepared this *Remediation Summary & Backfill Request* for the release site known as the Drinkard 20-Inch. Details of the release are summarized below:

Location of Release Source

Latitude: 32.40164 Longitude: -103.13854

Provided GPS are in WGS84 format.

Site Name:	Drinkard 20-Inch	Site Type:	Pipeline
Date Release Discovered:	7/22/2020	API # (if applicable):	N/A

Unit Letter	Section	Township	Range	County
M	11	22S	37E	Lea

Surface Owner: [ ] State [ ] Federal [ ] Tribal [X] Private (Name Irvin Boyd)

Nature and Volume of Release

[ ] Crude Oil	Volume Released (bbls)		Volume Recovered (bbls)	
[X] Produced Water	Volume Released (bbls)	43.5	Volume Recovered (bbls)	N/A
	Is the concentration of dissolved chloride in the produced water >10,000 milligrams per liter (mg/L)?		[X] Yes [ ] No [ ] N/A	
[X] Condensate	Volume Released (bbls)	4.8	Volume Recovered (bbls)	N/A
[X] Natural Gas	Volume Released (Mcf)	7.59	Volume Recovered (Mcf)	N/A
[ ] Other (describe)	Volume/Weight Released		Volume/Weight Recovered	

Cause of Release:
A pinhole developed in a 20-inch steel pipeline due to external corrosion.

Initial Response

[X] The source of the release has been stopped.
[X] The impacted area has been secured to protect human health and the environment.
[X] Release materials have been contained via the use of berms or dikes, absorbent pad, or other containment devices
[X] All free liquids and recoverable materials have been removed and managed appropriately.

During initial response activities, the damaged section of pipeline was replaced, and wet/visibly stained soil was immediately excavated to mitigate the extent of the release. The release affected a total area of the pipeline right-of-way (ROW) and adjacent pasture measuring approximately 10,109 square feet. Based on the calculated release volumes and the dimensions of the surface area affected, the initial depth of saturation ranged from 1.2 to 2.4 inches.

Previously submitted portions of the NMOCD Form C-141 are available on the NMOCD Imaging System.

2.0 SITE CHARACTERIZATION

A search of groundwater databases maintained by the New Mexico Office of the State Engineer (NMOSE) and United States Geological Survey (USGS) was conducted in an effort to determine the horizontal distance to known water sources within a half-mile radius of the release site. Probable groundwater depth was determined using data generated by numeric models based on available water well data and published information. A test trench advanced during the course of remediation activities (see summary in Section 4.0 below) indicated the depth to groundwater at the release site is greater than 45 feet below ground surface (bgs). No inflow of groundwater was detected during advancement of the test trench or following collection of delineation soil samples.

What is the shallowest depth to groundwater beneath the area affected by the release?	> 45 feet
Did the release impact groundwater or surface water?	☐ Yes ☒ No
Are the lateral extents of the release within 300 feet of a continuously flowing watercourse or any other significant watercourse?	☐ Yes ☒ No
Are the lateral extents of the release within 200 feet of any lakebed, sinkhole, or playa lake (measured from the ordinary high-water mark?	☐ Yes ☒ No
Are the lateral extents of the release within 300 feet of any occupied permanent residence, school, hospital, institution or church?	☐ Yes ☒ No
Are the lateral extents of the release within 500 horizontal feet of a spring or a private domestic fresh water well used by less than five households for domestic or stock watering purposes?	☐ Yes ☒ No
Are the lateral extents of the release within 1000 feet of any other fresh water well or spring?	☐ Yes ☒ No
Are the lateral extents of the release within the incorporated municipal boundaries or within a defined municipal fresh water well field?	☐ Yes ☒ No
Are the lateral extents of the release within 300 feet of a wetland?	☐ Yes ☒ No
Are the lateral extents of the release overlying a subsurface mine?	☐ Yes ☒ No
Are the lateral extents of the release overlying an unstable area such as karst geology?	☐ Yes ☒ No
Are the lateral extents of the release within a 100-year floodplain?	☐ Yes ☒ No
Did the release impact areas not on an exploration, development, production or storage site?	☒ Yes ☐ No

Additional NMOCD siting criteria data was gathered from available resources, including Bureau of Land Management (BLM) shapefiles; topographic maps; NMOSE and USGS databases; and aerial imagery. The results are depicted in Figures 1, 2, 4, and 5.

3.0 CLOSURE CRITERIA FOR SOILS IMPACTED BY A RELEASE

Laboratory analytical results and field data from soil samples collected during delineation and remediation activities conducted at the release site to date (see summary in Section 4.0 below) indicate the Drinkard 20-Inch spill occurred in area which had been affected by a release, or series of releases, in the past. The horizontal and vertical extent of soil impacts is incongruent with the volume of the release indicated on the initial "Release Notification and Corrective Action" form (C-141).

A preliminary review of historic aerial imagery also suggested the spill commingled with previous releases of unknown cause and volume. Visible surface staining and/or sparsity of vegetation in and adjacent to the Drinkard 20-inch pipeline ROW is evident in all publicly available aerial imagery from October 31, 1997, through February 20, 2019. In-situ chloride contamination from the unrelated historical releases may have increased susceptibility of the subject pipeline to external corrosion, which ultimately resulted in a pinhole leak. Historical aerial imagery is provided in Appendix F.

A search of the NMOCD's online imaging system indicated a February 1, 2006, release of "oil/gas/water" occurred along the margins of the Drinkard 20-Inch spill and potentially impacted the pipeline ROW, as well as the adjacent pasture (i.e., NMOCD remediation permit 1RP-754, Thomas Long A 003). According to an annotation written by an NMOCD representative on the "Release Notification and Corrective Action" form (C-141), the release was estimated to be "50+ BBL". Aside from the initial C-141 and accompanying correspondence, there is no additional documentation for the release in the imaging system and no evidence of remediation activities having been conducted.

On January 18, 2021, a representative of Etech contacted a representative of the NMOCD Santa Fe office to request any additional information available for the 2006 release, as well as any information available for a 2005 release approximately 600 feet to the northwest that is also documented in remediation permit 1RP-754. No response has been received from the NMOCD as of the time of this report.

The locations of the 2005 and 2006 historical release sites are depicted in Figure 2, "Aerial Proximity Map". The referenced initial C-141 and accompanying correspondence are provided in Appendix G.

A subsequent search of the NMOCD imaging system revealed a groundwater remediation site approximately 500 feet to the northeast of the Drinkard 20-Inch release site (i.e., NMOCD remediation permit 1RP-426-259, Rice BD N-11 Boot). According to laboratory analytical documentation provided in the "ICP Report and Corrective Action Plan (CAP)" dated January 23, 2012, chloride concentrations in groundwater samples collected from the on-site monitor wells ranged from 2,070 mg/L in the upgradient well MW-2 to 2,630 mg/L in recovery well MW-1. Total dissolved solids (TDS) concentrations ranged from 3,740 mg/L in downgradient well MW-3 to 5,560 mg/L in MW-1. Laboratory analytical results included in the "CAP Report for Groundwater and Termination Request" (Termination Request) dated July 12, 2012, indicated the chloride concentration in recovery well MW-1 was 3,250 mg/L. The sample was not analyzed for TDS.

The locations of historical release site 1RP-426-259 and the referenced monitor wells are depicted in Figure 2. Groundwater quality data is provided in Appendix B.

A review of both the CAP and the Termination Request indicated no cross-gradient wells were installed at the Rice BD N-11 Boot release site, and the horizontal extent of the dissolved-phase plume was not delineated. Premised on this information, the background concentration of chloride and TDS in the area exceeds the New Mexico Water Quality Control Commission (NMWQCC) standards of 250.0 mg/L and 1,000.0 mg/L listed in Sections 20.6.2.3103 B.(1) and B.(7), respectively, of the New Mexico Administrative Code (NMAC). Water exhibiting concentrations of chloride over 1,000 mg/kg is considered to be non-potable and unfit for human consumption by the Environmental Protection Agency (EPA). Groundwater exhibiting concentrations of TDS in excess of 1,000 mg/L is classified as "saline" and/or "brackish" by the USGS and is not "fresh water", as specified in Section 19.15.29 NMAC.

In consideration of the information summarized above, less stringent Closure Criteria for contaminants of concern is allowable than would typically be conferred to a site where depth to groundwater may be less than 50 feet bgs. Targa hereby requests the following Closure Criteria and Reclamation Standards for the release site:

Probable Depth to Groundwater	Constituent	Laboratory Analytical Method	Closure Criteria*†	Reclamation Standard*‡
> 45 feet	Chloride (Cl-)	EPA 300.0 or SM4500 Cl B	10,000	600
	Total Petroleum Hydrocarbons (TPH)	EPA SW-846 Method 8015M Ext	2,500	100
	Diesel Range Organics + Gas Range Organics (DRO + GRO)	EPA SW-846 Method 8015M	1,000	-
	Benzene	EPA SW-846 Methods 8021b or 8260b	10	10
	Benzene, Toluene, Ethylbenzene, Total Xylenes (BTEX)	EPA SW-846 Methods 8021b or 8260b	50	50

* Measured in milligrams per kilogram (mg/kg)
† Table I, Section 19.15.29.12 NMAC.
‡ The NMOCD Reclamation Standard applies only to the top 4' of soil in non-production areas. Section 19.15.29.13 D.(1) NMAC.

4.0 REMEDIATION ACTIVITIES SUMMARY

On July 22, 2020, remediation activities commenced at the release site. Targa retained Etech to provide oversight for the remediation activities and to conduct delineation and confirmation soil sampling. Empire Energy Services, LLC, was contracted to perform the excavation.

In accordance with NMOCD regulatory guidelines, impacted soil affected above the proposed NMOCD Closure Criteria and/or NMOCD Reclamation Standard was excavated and stockpiled on-site, pending transfer to an NMOCD-permitted surface waste facility for disposal. The floor and sidewalls of the excavation were advanced until field observations and/or test results suggested BTEX, TPH, and chloride concentrations were below the applicable NMOCD Closure Criteria and/or NMOCD Reclamation Standard.

Based on field observations and test results, the excavation was subdivided into two (2) sections: Upper Excavation and Lower Excavation. The dimensions of the Upper Excavation are approximately 270 feet in length, 34 to 90 feet in width, and an average of four (4) to five (5) feet in depth. The dimensions of the Lower Excavation range from approximately 78 to 231 feet in length, eight (8) to 85 feet in width, and eight (8) to 19 feet in depth.

Soil sample locations and the horizontal extents of the Upper and Lower Excavations are depicted in Figure 3, "Site & Sample Location Map". A soil chemistry table is provided as Table 1. Field test data is provided in Appendix C. Laboratory analytical reports are provided in Appendix D. General photographs of the release site are provided in Appendix E.

Between September 15 and 17, 2020, Etech conducted confirmation soil sampling at the release site. During the sampling event, Etech collected 97 confirmation soil samples (NW3 through NW6, SW1 through SW4, EW1 through EW4, WW1 through WW4, and FS1 through FS81) from the floor and sidewalls of the Upper Excavation and 47 confirmation soil samples (NW1, NW2, EW5, EW6, EW7, FS82 through FS93, LFS1 through LFS20, LNEW1 through LNEW5, and LSWW1 through LSWW5) from the floor and sidewalls of the Lower Excavation. The soil samples were submitted to a certified commercial laboratory for analysis of BTEX, TPH, and chloride. Laboratory analytical results indicated BTEX and chloride concentrations were below the proposed NMOCD Closure Criteria and/or applicable NMOCD Reclamation Standard in each of the submitted soil samples. GRO+DRO and/or TPH concentrations exceeded the applicable NMOCD Closure Criteria in soil samples FS88, LFS6, LFS7, LFS9, LNEW3, and LSWW3.

Upon review of laboratory analytical documentation, the Upper Excavation was further advanced in the areas characterized by soil samples NW3 through NW6, EW4, WW1, FS1, FS2, FS4 through FS9, FS12, FS17, FS28, FS36 through FS40, FS42, FS48 through FS51, FS56, FS61, FS62, FS74, FS75, FS79, and FS80. The Lower Excavation was further advanced in the areas characterized by soil samples NW1, NW2, EW5, EW6, EW7, FS82 through FS92, LFS1, LFS2, LFS6 through LFS10, LFS14, LFS20, LNEW1 through LNEW3, LSWW1, and LSWW3 through LSWW5.

On December 4, 2020, Etech revisited the release site and collected three (3) confirmation samples (EW4b, FS79b, and FS80b) from the floor and sidewalls of the Upper Excavation. Etech also collected 12 confirmation soil samples (FS89b-1, FS89b-2, LFS8b-1, LFS8b-2, LFS9b-1, LFS9b-2, LFS10b-1, LFS10b-2, LFS14b, LFS20b, LNEW3b, and LSWW4b) from the floor and sidewalls of the Lower Excavation. The soil samples were field-screened utilizing a chloride test kit and/or olfactory /visual senses and submitted to the laboratory for analysis of TPH and/or chloride. Laboratory analytical results indicated chloride concentrations were below both the proposed NMOCD Closure Criteria and the NMOCD Reclamation Standard in each of the submitted soil samples. GRO+DRO and/or TPH concentrations exceeded the applicable NMOCD Closure Criteria in soil samples FS79b, FS80b, LFS8b-1, LFS8b-2, and LFS9b-2.

Upon review of laboratory analytical documentation, the Upper Excavation was further advanced in the areas characterized by soil samples EW4b, FS79b, and FS80b. The Lower Excavation was further advanced in the areas characterized by soil samples FS89b-1, LFS8b-1, LFS8b-2, LFS9b-2, and LNEW3b.

On December 22, 2020, Etech advanced a series of test trenches (TT #1 through TT #3, NE TT, and NW TT) to further investigate the vertical extent of impacted soil. Test trench TT #1 was advanced in the floor of the Lower Excavation in the area characterized by sample points LFS1, LFS2, and LNEW5 to a total depth of approximately 30 feet bgs. Test Trench TT #2 was advanced in the floor of the Lower Excavation in the area characterized by sample points LFS14b, LFS15, and LSWW5 to a total depth of approximately 19 feet bgs. Test trench TT #3 was advanced in the floor of the Lower Excavation in the area characterized by soil samples FS85 and FS86 to a total depth of 45 feet bgs. Test trenches NE TT and NW TT were advanced horizontally from the northeast and northwest sidewalls, respectively, of the Upper Excavation and vertically to total depths of approximately six (6) feet bgs. The locations of the test trenches are depicted in Figure 3.

Soil samples collected during advancement of the test trenches were field-screened utilizing a chloride test kit and/or olfactory/visual senses, and six (6) confirmation soil samples (NE TT, NW TT, TT #1 , TT #2, TT #3e, and TT #3) were submitted to the laboratory for analysis of BTEX, TPH, and chloride. Laboratory analytical results indicated BTEX, TPH, and chloride concentrations were below the proposed NMOCD Closure Criteria in each of the submitted soil samples. However, the horizontal and vertical extent of soil impacts encountered during advancement of the test trenches was incongruent with the volume of the Drinkard 20-Inch release and, in conjunction with soil samples collected previously from the Upper and Lower Excavations, further indicate that the release commingled with in-situ contamination from a historical release, or series of releases, as postulated in Section 3.0 above.

Field observations made during the advancement of test trench TT #3 indicate the depth to groundwater at the site is greater than 45 feet bgs. No inflow of groundwater was detected during advancement of test trench TT #3 or following collection of delineation soil samples.

On January 13, 2021, Etech revisited the release site and collected eight (8) confirmation soil samples (NW3-S through NW6-S, EW4-S, WW1-S, FS79c, and FS80c) from the floor and sidewalls of the Upper Excavation. Etech also collected 13 confirmation soil samples (NW1-S, NW2-S, EW5-S, EW6-S, EW7-S, FS88b, LFS6b, LFS7b, LFS8-1b, LFS8b-2b, LFS9b-2b, LNEW3b, and LSWW3b) from the floor and sidewalls of the Lower Excavation. The soil samples were field-screen utilizing a choride test kit and/or olfactory/visual senses and submitted to the laboratory for analysis of TPH and/or chloride. Laboratory analytical results indicated TPH and chloride concentrations were below both the proposed NMOCD Closure Criteria and applicable NMOCD Reclamation Standards in each of the submitted soil samples.

To date, approximately 11,288 cubic yards of impacted soil have been excavated and transported to Sundance Services, Inc. (NMOCD Permit #NM-01-0003), for disposal. Soil disposal manifests are provided in Appendix H.

5.0 SUMMARY & BACKFILL REQUEST

Based on the information summarized below, Targa requests permission to cease remediation activities at the Drinkard 20-Inch release site and backfill the excavated areas:

• Remediation activities were conducted in accordance with applicable NMOCD regulatory guidelines. Impacted soil affected above the proposed NMOCD Closure Criteria and/or NMOCD Reclamation Standards was excavated to the extent practicable and transported to an NMOCD-permitted disposal facility.

• Laboratory analytical results from confirmation soil samples indicate in-situ concentrations of BTEX, TPH, and chloride in the Upper Excavation are below the proposed NMOCD Closure Criteria and NMOCD Reclamation Standards.

• In-situ concentrations of BTEX, TPH, and chloride in the Lower Excavation are below the proposed NMOCD Closure Criteria.

• The horizontal and vertical extent of soil impacts encountered during delineation and remediation activities is incongruent with the spill volumes listed on the initial C-141. Historic aerial imagery and historical documention in the NMOCD imaging system suggests the Drinkard 20-Inch spill commingled with previous releases. The in-situ contamination in the areas characterized by soil samples FS34 (2,200 mg/kg Cl-), FS35 (1,510 mg/kg Cl-), FS76 (1,610 mg/kg Cl-), FS79c (389 mg/kg TPH), and LFS5 (701 mg/kg Cl-) is potentially from these unrelated historical releases. In-situ chloride contamination from the historical releases may also have increased susceptibility of the subject pipeline to external corrosion, which ultimately resulted in a pinhole leak.

• A review of groundwater quality data indicates the background concentration of chloride in the immediate area ranges from 2,070 mg/L to 3,250 mg/L. TDS concentrations range from 3,740 mg/L to 5,560 mg/L. Groundwater with chloride and TDS concentrations in excess of 1,000 mg/L is considered to be non-potable, brackish, and unfit for human consumption. As such, leaving the contamination in the areas characterized by soil samples FS34, FS35, FS76, FS79c, and LFS5 in-situ does not pose a threat to fresh water, public health, or the environment.

Following backfilling, a *Soil Closure Request* will be submitted, documenting completed restoration, reclamation, and revegetation acitivites.

6.0 RESTORATION, RECLAMATION & RE-VEGETATION PLAN

Areas affected by remediation and closure activities will be substantially restored to the condition that existed prior to the release, to the extent practicable. Excavated areas will be backfilled with locally sourced, non-impacted "like" material placed at or near original relative positions. The affected area will be contoured and compacted to achieve erosion control, stability, and preservation of surface water flow to the extent practicable. Affected areas not on production pads and/or lease roads will be reseeded with an agency and/or landowner-approved seed mixture during the first favorable growing season following closure of the site.

7.0 LIMITATIONS

Etech Environmental & Safety Solutions, Inc., has prepared this *Remediation Summary & Backfill Request* to the best of its ability. No other warranty, expressed or implied, is made or intended. Etech has examined and relied upon documents reference in the report and on oral statements made by certain individuals. Etech has not conducted an independent examination of the facts contained in referenced materials and statements. Etech has presumed the genuineness of these documents and statements and that the information provided therein is true and accurate. Etech has prepared the report in a professional manner, using the degree of skill and care exercised by similar environmental consultants. Etech notes that the facts and conditions referenced in this report may change over time, and the conclusions and recommendations set forth herein are applicable only to the facts and conditions as described at the time of this report.

This report has been prepared for the benefit of Targa Midstream Services, LLC. Use of the information contained in this report is prohibited without the consent of Etech and/or Targa Midstream Services, LLC.

USGS 322342103073101 22S.37E.11.444443

Lea County, New Mexico
Latitude 32°23'42", Longitude 103°07'31" NAD27
Land-surface elevation 3,335 feet above NAVD88
The depth of the well is 78 feet below land surface.
This well is completed in the Pecos River Basin alluvial aquifer (N100PCSRVR) national aquifer.
This well is completed in the Alluvium, Bolson Deposits and Other Surface Deposits (110AVMB) local aquifer.

1991-04-25		D	72019	57.98			1	Z			A

Explanation

Section	Code	Description
Water-level date-time accuracy	D	Date is accurate to the Day
Parameter code	62610	Groundwater level above NGVD 1929, feet
Parameter code	62611	Groundwater level above NAVD 1988, feet
Parameter code	72019	Depth to water level, feet below land surface
Referenced vertical datum	NAVD88	North American Vertical Datum of 1988
Referenced vertical datum	NGVD29	National Geodetic Vertical Datum of 1929
Status	1	Static
Status	3	Above
Method of measurement	Z	Other.
Measuring agency		Not determined
Source of measurement		Not determined
Water-level approval status	A	Approved for publication -- Processing and review completed.

Appendix B
Groundwater Quality Data

CARDINAL Laboratories

PHONE (575) 393-2326 ° 101 E. MARLAND ° HOBBS, NM 88240

Note: Extracted from "ICP Report and Corrective Action Plan (CAP)", dated January 23, 2012
NMOCD remediation permit 1RP-426-259, Rice BD N-11 Boot.

October 26, 2011

Hack Conder

Rice Operating Company

112 W. Taylor

Hobbs, NM 88240

RE: BD JUNCTION N-11 BOOT

Enclosed are the results of analyses for samples received by the laboratory on 10/18/11 11:20.

Cardinal Laboratories is accredited through Texas NELAP for:

Method SW-846 8021	Benzene, Toluene, Ethyl Benzene, and Total Xylenes
Method SW-846 8260	Benzene, Toluene, Ethyl Benzene, and Total Xylenes
Method TX 1005	Total Petroleum Hydorcarbons

Certificate number T104704398-08-TX. Accreditation applies to solid and chemical materials and non-potable water matrices.

Cardinal Laboratories is accreditated through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Celey D. Keene

Celey D. Keene

Lab Director/Quality Manager

RE: BD N-11 BOOT (22/37)

Enclosed are the results of analyses for samples received by the laboratory on 06/21/12 15:45.

Cardinal Laboratories is accredited through Texas NELAP under certificate number T104704398-11-3. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accreditated through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Celey D. Keene

PM :

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the Eurofins Xenco, LLC Report Number(s) 673086. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by Eurofins Xenco, LLC. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 673086 will be filed for 45 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting Eurofins Xenco, LLC to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Jessica Kramer

None

Analytical non conformances and comments:

Batch: LBA-3137726 BTEX by EPA 8021B

Lab Sample ID 673086-016 was randomly selected for Matrix Spike/Matrix Spike Duplicate (MS/MSD). Ethylbenzene, Toluene, m,p-Xylenes , o-Xylene recovered below QC limits in the Matrix Spike and Matrix Spike Duplicate. Outlier/s are due to possible matrix interference. Samples in the analytical batch are: 673086-016, -017, -018, -019, -020, -021, -022, -023, -024, -025, -026, -027, -028, -029, -030, -031.

The Laboratory Control Sample for Toluene, m,p-Xylenes , Ethylbenzene, o-Xylene is within laboratory Control Limits, therefore the data was accepted.

Surrogate 4-Bromofluorobenzene recovered below QC limits. Samples affected are: 7711798-1-BLK.

Batch: LBA-3137739 Chloride by EPA 300

Lab Sample ID 673086-006 was randomly selected for Matrix Spike/Matrix Spike Duplicate (MS/MSD). Chloride recovered above QC limits in the Matrix Spike and Matrix Spike Duplicate. Outlier/s are due to possible matrix interference. Samples in the analytical batch are: 673086-001, -002, -003, -004, -005, -006, -007, -008, -009, -010, -011, -012, -013, -014, -015.

The Laboratory Control Sample for Chloride is within laboratory Control Limits, therefore the data was accepted.

Batch: LBA-3137743 Chloride by EPA 300

Lab Sample ID 673086-026 was randomly selected for Matrix Spike/Matrix Spike Duplicate (MS/MSD). Chloride recovered below QC limits in the Matrix Spike. Outlier/s are due to possible matrix interference. Samples in the analytical batch are: 673086-016, -017, -018, -019, -020, -021, -022, -023, -024, -025, -026, -027, -028, -029, -030, -031, -032, -033, -034, -035.

The Laboratory Control Sample for Chloride is within laboratory Control Limits, therefore the data was accepted.

Batch: LBA-3137764 TPH By SW8015 Mod

Surrogate o-Terphenyl recovered above QC limits. Matrix interferences is suspected; data confirmed by re-analysis.

Samples affected are: 673086-029.

Batch: LBA-3137843 BTEX by EPA 8021B
Surrogate 4-Bromofluorobenzene recovered above QC limits. Samples affected are: 7711891-1-BKS,673086-076 SD,673086-058,673086-059,673086-071,673086-061,673086-062,673086-066,673086-067,673086-068,673086-069,673086-057,673086-055,673086-060.

Batch: LBA-3137844 BTEX by EPA 8021B
Surrogate 4-Bromofluorobenzene recovered below QC limits. Samples affected are: 7711892-1-BLK.

Batch: LBA-3137845 BTEX by EPA 8021B
Surrogate 4-Bromofluorobenzene recovered below QC limits. Samples affected are: 7711894-1-BLK.

Batch: LBA-3137848 BTEX by EPA 8021B
Surrogate 4-Bromofluorobenzene recovered below QC limits. Matrix interferences is suspected. Samples affected are: 673086-079.

Batch: LBA-3137850 BTEX by EPA 8021B
Lab Sample ID 673086-135 was randomly selected for Matrix Spike/Matrix Spike Duplicate (MS/MSD). Ethylbenzene, Toluene, m,p-Xylenes , o-Xylene recovered below QC limits in the Matrix Spike and Matrix Spike Duplicate. Outlier/s are due to possible matrix interference. Samples in the analytical batch are: 673086-112, -113, -114, -115, -117, -118, -119, -120, -121, -122, -123, -124, -125, -126, -127, -135.
The Laboratory Control Sample for Toluene, m,p-Xylenes , Ethylbenzene, o-Xylene is within laboratory Control Limits, therefore the data was accepted.

Batch: LBA-3137881 Chloride by EPA 300
Lab Sample ID 673086-134 was randomly selected for Matrix Spike/Matrix Spike Duplicate (MS/MSD). Chloride recovered below QC limits in the Matrix Spike and Matrix Spike Duplicate. Outlier/s are due to possible matrix interference. Samples in the analytical batch are: 673086-124, -125, -126, -127, -128, -129, -130, -131, -132, -133, -134, -135, -136, -137, -138, -139, -140, -141, -142, -143.
The Laboratory Control Sample for Chloride is within laboratory Control Limits, therefore the data was accepted.

Batch: LBA-3137932 BTEX by EPA 8021B
Surrogate 4-Bromofluorobenzene recovered above QC limits. Samples affected are: 7711936-1-BSD,673087-011 S,673087-011 SD,673086-144,673086-139,673086-140,673086-141,673086-142,673086-143,673086-137,673086-136,673086-133,673086-138.

Flagging Criteria

X In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.

B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.

D The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.

E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.

F RPD exceeded lab control limits.

J The target analyte was positively identified below the quantitation limit and above the detection limit.

U Analyte was not detected.

L The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.

H The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.

K Sample analyzed outside of recommended hold time.

JN A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

** Surrogate recovered outside laboratory control limit.

BRL Below Reporting Limit. **ND** Not Detected.

RL Reporting Limit

MDL Method Detection Limit **SDL** Sample Detection Limit **LOD** Limit of Detection

PQL Practical Quantitation Limit **MQL** Method Quantitation Limit **LOQ** Limit of Quantitation

DL Method Detection Limit

NC Non-Calculable

SMP Client Sample **BLK** Method Blank

BKS/LCS Blank Spike/Laboratory Control Sample **BKSD/LCSD** Blank Spike Duplicate/Laboratory Control Sample Duplicate

MD/SD Method Duplicate/Sample Duplicate **MS** Matrix Spike **MSD:** Matrix Spike Duplicate

+ NELAC certification not offered for this compound.

* (Next to analyte name or method description) = Outside XENCO's scope of NELAC accreditation

QC Summary 673086

Notice: Signature of this document and relinquishment of samples constitutes a valid purchase order from client company to Xenco, its affiliates and subcontractors. It assigns standard terms and conditions of service. Xenco will be liable only for the cost of samples and shall not assume any responsibility for any losses or expenses incurred by the client if such losses are due to circumstances beyond the control of Xenco. A minimum charge of $75.00 will be applied to each project and a charge of $5 for each sample submitted to Xenco, but not analyzed. These terms will be enforced unless previously negotiated.

Notice: Signature of this document and relinquishment of samples constitutes a valid purchase order from client company to Xenco, its affiliates and subcontractors. It assigns standard terms and conditions of service. Xenco will be liable only for the cost of samples and shall not assume any responsibility for any losses or expenses incurred by the client if such losses are due to circumstances beyond the control of Xenco. A minimum charge of $75.00 will be applied to each project and a charge of $5 for each sample submitted to Xenco, but not analyzed. These terms will be enforced unless previously negotiated.

Notice: Signature of this document and relinquishment of samples constitutes a valid purchase order from client company to Xenco, its affiliates and subcontractors. It assigns standard terms and conditions of service. Xenco will be liable only for the cost of samples and shall not assume any responsibility for any losses or expenses incurred by the client if such losses are due to circumstances beyond the control of Xenco. A minimum charge of $75.00 will be applied to each project and a charge of $5 for each sample submitted to Xenco, but not analyzed. These terms will be enforced unless previously negotiated.

PM :

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the Eurofins Xenco, LLC Report Number(s) 680368. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by Eurofins Xenco, LLC. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 680368 will be filed for 45 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting Eurofins Xenco, LLC to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Jessica Kramer

Flagging Criteria

X In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.

B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.

D The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.

E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.

F RPD exceeded lab control limits.

J The target analyte was positively identified below the quantitation limit and above the detection limit.

U Analyte was not detected.

L The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.

H The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.

K Sample analyzed outside of recommended hold time.

JN A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

** Surrogate recovered outside laboratory control limit.

BRL Below Reporting Limit. **ND** Not Detected.

RL Reporting Limit

MDL Method Detection Limit **SDL** Sample Detection Limit **LOD** Limit of Detection

PQL Practical Quantitation Limit **MQL** Method Quantitation Limit **LOQ** Limit of Quantitation

DL Method Detection Limit

NC Non-Calculable

SMP Client Sample **BLK** Method Blank

BKS/LCS Blank Spike/Laboratory Control Sample **BKSD/LCSD** Blank Spike Duplicate/Laboratory Control Sample Duplicate

MD/SD Method Duplicate/Sample Duplicate **MS** Matrix Spike **MSD:** Matrix Spike Duplicate

+ NELAC certification not offered for this compound.

* (Next to analyte name or method description) = Outside XENCO's scope of NELAC accreditation

QC Summary 680368

PM :

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the Eurofins Xenco, LLC Report Number(s) 682415. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by Eurofins Xenco, LLC. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 682415 will be filed for 45 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting Eurofins Xenco, LLC to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Jessica Kramer

Client Name: Etech Environmental & Safety Solution, Inc

Project Name: Drinkard 24"

Project ID:
Work Order Number(s): *682415*

Report Date: *12.30.2020*
Date Received: *12.23.2020*

Sample receipt non conformances and comments:

Sample receipt non conformances and comments per sample:

None

Analytical non conformances and comments:

Batch: LBA-3146247 TPH by SW8015 Mod

Surrogate o-Terphenyl recovered above QC limits. Matrix interferences is suspected; data confirmed by re-analysis.
Samples affected are: 682353-021 S,682353-021 SD.
Surrogate 1-Chlorooctane recovered above QC limits Data confirmed by re-analysis. Samples affected are: 7718035-1-BSD,682353-021 S,682353-021 SD.

Flagging Criteria

X In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.

B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.

D The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.

E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.

F RPD exceeded lab control limits.

J The target analyte was positively identified below the quantitation limit and above the detection limit.

U Analyte was not detected.

L The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.

H The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.

K Sample analyzed outside of recommended hold time.

JN A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

** Surrogate recovered outside laboratory control limit.

BRL Below Reporting Limit. **ND** Not Detected.

RL Reporting Limit

MDL Method Detection Limit **SDL** Sample Detection Limit **LOD** Limit of Detection

PQL Practical Quantitation Limit **MQL** Method Quantitation Limit **LOQ** Limit of Quantitation

DL Method Detection Limit

NC Non-Calculable

SMP Client Sample **BLK** Method Blank

BKS/LCS Blank Spike/Laboratory Control Sample **BKSD/LCSD** Blank Spike Duplicate/Laboratory Control Sample Duplicate

MD/SD Method Duplicate/Sample Duplicate **MS** Matrix Spike **MSD:** Matrix Spike Duplicate

+ NELAC certification not offered for this compound.

* (Next to analyte name or method description) = Outside XENCO's scope of NELAC accreditation

#12 Samples in proper container/ bottle?	**Yes**
#13 Samples properly preserved?	**Yes**
#14 Sample container(s) intact?	**Yes**
#15 Sufficient sample amount for indicated test(s)?	**Yes**
#16 All samples received within hold time?	**Yes**
#17 Subcontract of sample(s)?	**N/A**
#18 Water VOC samples have zero headspace?	**N/A**

*** Must be completed for after-hours delivery of samples prior to placing in the refrigerator**

PM :

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the Eurofins Xenco, LLC Report Number(s) 684789. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by Eurofins Xenco, LLC. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 684789 will be filed for 45 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting Eurofins Xenco, LLC to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Jessica Kramer

Flagging Criteria

X In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.

B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.

D The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.

E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.

F RPD exceeded lab control limits.

J The target analyte was positively identified below the quantitation limit and above the detection limit.

U Analyte was not detected.

L The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.

H The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.

K Sample analyzed outside of recommended hold time.

JN A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

** Surrogate recovered outside laboratory control limit.

BRL Below Reporting Limit. **ND** Not Detected.

RL Reporting Limit

MDL Method Detection Limit **SDL** Sample Detection Limit **LOD** Limit of Detection

PQL Practical Quantitation Limit **MQL** Method Quantitation Limit **LOQ** Limit of Quantitation

DL Method Detection Limit

NC Non-Calculable

SMP Client Sample **BLK** Method Blank

BKS/LCS Blank Spike/Laboratory Control Sample **BKSD/LCSD** Blank Spike Duplicate/Laboratory Control Sample Duplicate

MD/SD Method Duplicate/Sample Duplicate **MS** Matrix Spike **MSD:** Matrix Spike Duplicate

+ NELAC certification not offered for this compound.

* (Next to analyte name or method description) = Outside XENCO's scope of NELAC accreditation

Notice: Signature of this document and relinquishment of samples constitutes a valid purchase order from client company to Xenco, its affiliates and subcontractors. It assigns standard terms and conditions of service. Xenco will be liable only for the cost of samples and shall not assume any responsibility for any losses or expenses incurred by the client if such losses are due to circumstances beyond the control of Xenco. A minimum charge of $75.00 will be applied to each project and a charge of $5 for each sample submitted to Xenco, but not analyzed. These terms will be enforced unless previously negotiated.

Irregular Area Running N/S. Approx. 3,320 SQ. FT.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Attn :
Paul Sheeley
OCD
Hobbs, NM

Dear Paul :
Please find with this fax a form C-141 concerning an accidental release we had on our Thomas Long A # 3 flowline. As you know, we are currently cleaning up an earlier release from this line. The new release is about 120 yds. due south of the one we are now working on.

The land owner is Irvin Boyd. I have been in contact with him. He knows what happened, and knows what we are doing to take care of it.

We have the situation stabilized, and have replaced the old line with a new 2" poly pipe flowline. Mark Larson will be in Eunice Friday morning (2/3/06) to look the site over, and will formulate a cleanup plan. We will keep you posted at all times.

Please call with any questions or concerns.

Sincerely,

Marvin Burrows

RE: DRINKARD 20"

Enclosed are the results of analyses for samples received by the laboratory on 09/01/21 13:50.

Cardinal Laboratories is accredited through Texas NELAP under certificate number T104704398-20-13. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accreditated through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Celey D. Keene

Lab Director/Quality Manager

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Dear Ms. Jessica Kramer

The following report includes the data for the above referenced project for sample(s) received on 5/10/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-15 (5&20 ppbv) are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

eurofins | Air Toxics

LABORATORY NARRATIVE
EPA Method TO-15 Soil Gas
Eurofins Xenco, LLC
Workorder# 2205202A

One 1 Liter Tedlar Bag sample was received on May 10, 2022. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode. The method involves concentrating up to 50 mLs of air. The concentrated aliquot is then flash vaporized and swept through a water management system to remove water vapor. Following dehumidification, the sample passes directly into the GC/MS for analysis.

Receiving Notes

Sample was received past the recommended hold time of 3 days. Analysis proceeded.

Analytical Notes

Method TO-15 is validated for samples collected in specially treated canisters. As such, the use of Tedlar bags for sample collection is outside the scope of the method and not recommended for ambient or indoor air samples. It is the responsibility of the data user to determine the usability of TO-15 results generated from Tedlar bags.

A single point calibration for TPH referenced to Gasoline was performed for each daily analytical batch. Recovery is reported as 100% in the associated results for each CCV.

Dilution was performed on sample Air Sample #1 (880-14525-1) due to the presence of high level target species.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

LABORATORY NARRATIVE
Modified ASTM D-1946
Eurofins Xenco, LLC
Workorder# 2205202B

One 1 Liter Tedlar Bag sample was received on May 10, 2022. The laboratory performed analysis via Modified ASTM Method D-1946 for Carbon Dioxide in air using GC/TCD. The method involves direct injection of 1.0 mL of sample.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the EATL modifications.

Requirement	***ASTM D-1946***	***ATL Modifications***
Calibration	A single point calibration is performed using a reference standard closely matching the composition of the unknown.	A minimum of 5-point calibration curve is performed. Quantitation is based on average Response Factor.
Reference Standard	The composition of any reference standard must be known to within 0.01 mol % for any component.	The standards used by ATL are blended to a >/= 95% accuracy.
Sample Injection Volume	Components whose concentrations are in excess of 5 % should not be analyzed by using sample volumes greater than 0.5 mL.	The sample container is connected directly to a fixed volume sample loop of 1.0 mL on the GC. Linear range is defined by the calibration curve. Bags are loaded by vacuum.
Normalization	Normalize the mole percent values by multiplying each value by 100 and dividing by the sum of the original values. The sum of the original values should not differ from 100% by more than 1.0%.	Results are not normalized. The sum of the reported values can differ from 100% by as much as 15%, either due to analytical variability or an unusual sample matrix.
Precision	Precision requirements established at each concentration level.	Duplicates should agree within 25% RPD for detections > 5 X's the RL.

Receiving Notes

Samples were received past the recommended hold time of 3 days. Analysis proceeded.

Analytical Notes

There were no analytical discrepancies.

eurofins | Air Toxics

Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
B - Compound present in laboratory blank greater than reporting limit.
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the detection limit.
M - Reported value may be biased due to apparent matrix interferences.
File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Ms. Jessica Kramer
Eurofins Xenco, LLC
1211 W Florida Ave

Midland TX 79701

Project Name: Drinkand 20 inch
Project #: 88000073
Workorder #: 2205202BR1

Dear Ms. Jessica Kramer

The following report includes the data for the above referenced project for sample(s) received on 5/10/2022 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified ASTM D-1946 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Kelly Buettner at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Kelly Buettner

Project Manager

LABORATORY NARRATIVE
Modified ASTM D-1946
Eurofins Xenco, LLC
Workorder# 2205202BR1

One 1 Liter Tedlar Bag sample was received on May 10, 2022. The laboratory performed analysis via Modified ASTM Method D-1946 for Methane and fixed gases in air using GC/FID or GC/TCD. The method involves direct injection of 1.0 mL of sample.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the EATL modifications.

Requirement	***ASTM D-1946***	***ATL Modifications***
Calibration	A single point calibration is performed using a reference standard closely matching the composition of the unknown.	A minimum of 5-point calibration curve is performed. Quantitation is based on average Response Factor.
Reference Standard	The composition of any reference standard must be known to within 0.01 mol % for any component.	The standards used by ATL are blended to a >/= 95% accuracy.
Sample Injection Volume	Components whose concentrations are in excess of 5 % should not be analyzed by using sample volumes greater than 0.5 mL.	The sample container is connected directly to a fixed volume sample loop of 1.0 mL on the GC. Linear range is defined by the calibration curve. Bags are loaded by vacuum.
Normalization	Normalize the mole percent values by multiplying each value by 100 and dividing by the sum of the original values. The sum of the original values should not differ from 100% by more than 1.0%.	Results are not normalized. The sum of the reported values can differ from 100% by as much as 15%, either due to analytical variability or an unusual sample matrix.
Precision	Precision requirements established at each concentration level.	Duplicates should agree within 25% RPD for detections > 5 X's the RL.

Receiving Notes

Samples were received past the recommended hold time of 3 days. Analysis proceeded.

Analytical Notes

There were no analytical discrepancies.

The workorder was reissued on 07/05/2022 to report additional compounds for Air Sample #1 (880-14525-1) per client request.

Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
B - Compound present in laboratory blank greater than reporting limit.
J - Estimated value.
E - Exceeds instrument calibration range.
S - Saturated peak.
Q - Exceeds quality control limits.
U - Compound analyzed for but not detected above the detection limit.
M - Reported value may be biased due to apparent matrix interferences.
File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

RE: DRINKARD 20"

Enclosed are the results of analyses for samples received by the laboratory on 05/12/22 14:45.

Cardinal Laboratories is accredited through Texas NELAP under certificate number T104704398-21-14. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accreditated through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Celey D. Keene

Manuel Reyes,

Thank you for choosing Envirotech, Inc. as your analytical testing laboratory for the sample(s) received on, 12/5/2023 7:30:00AM, under the Project Name: Leak #8.

The analytical test results summarized in this report with the Project Name: Leak #8 apply to the individual samples collected, identified and submitted bearing the project name on the enclosed chain-of-custody. Subcontracted sample analyses not conducted by Envirotech, Inc., are attached in full as issued by the subcontract laboratory.

Please review the Chain-of-Custody (COC) and Sample Receipt Checklist (SRC) for any issues reguarding sample receipt temperature, containers, preservation etc. To best understand your test results, review the entire report summarizing your sample data and the associated quality control batch data.

All reported data in this analytical report were analyzed according to the referenced method(s) and are in compliance with the latest NELAC/TNI standards, unless otherwise noted. Samples or analytical quality control parameters not meeting specific QC criteria are qualified with a data flag. Data flag definitions are located in the Notes and Definitions section of this analytical report.

If you have any questions concerning this report, please feel free to contact Envirotech, Inc.

Respectfully,

Sample Receipt Checklist (SRC)

Instructions: Please take note of any NO checkmarks.
If we receive no response concerning these items within 24 hours of the date of this notice, all the samples will be analyzed as requested.

Client:	Targa	Date Received:	12/05/23 07:30	Work Order ID:	E312025
Phone:	(432) 999-8675	Date Logged In:	12/05/23 08:41	Logged In By:	Jordan Montano
Email:	mreyes@targaresources.com	Due Date:	12/12/23 17:00 (5 day TAT)		

Chain of Custody (COC)

1. Does the sample ID match the COC?	Yes	
2. Does the number of samples per sampling site location match the COC	Yes	
3. Were samples dropped off by client or carrier?	Yes	Carrier: Courier
4. Was the COC complete, i.e., signatures, dates/times, requested analyses?	Yes	
5. Were all samples received within holding time? Note: Analysis, such as pH which should be conducted in the field, i.e, 15 minute hold time, are not included in this disucssion.	Yes	

Sample Turn Around Time (TAT)

6. Did the COC indicate standard TAT, or Expedited TAT?	Yes	

Sample Cooler

7. Was a sample cooler received?	Yes	
8. If yes, was cooler received in good condition?	Yes	
9. Was the sample(s) received intact, i.e., not broken?	Yes	
10. Were custody/security seals present?	No	
11. If yes, were custody/security seals intact?	NA	
12. Was the sample received on ice? If yes, the recorded temp is 4°C, i.e., 6°±2°C Note: Thermal preservation is not required, if samples are received w/i 15 minutes of sampling	Yes	
13. If no visible ice, record the temperature. Actual sample temperature: 4°C		

Sample Container

14. Are aqueous VOC samples present?	No	
15. Are VOC samples collected in VOA Vials?	NA	
16. Is the head space less than 6-8 mm (pea sized or less)?	NA	
17. Was a trip blank (TB) included for VOC analyses?	NA	
18. Are non-VOC samples collected in the correct containers?	Yes	
19. Is the appropriate volume/weight or number of sample containers collected?	Yes	

Field Label

20. Were field sample labels filled out with the minimum information:		
Sample ID?	Yes	
Date/Time Collected?	Yes	
Collectors name?	No	

Sample Preservation

21. Does the COC or field labels indicate the samples were preserved?	No	
22. Are sample(s) correctly preserved?	NA	
24. Is lab filteration required and/or requested for dissolved metals?	No	

Multiphase Sample Matrix

26. Does the sample have more than one phase, i.e., multiphase?	No	
27. If yes, does the COC specify which phase(s) is to be analyzed?	NA	

Subcontract Laboratory

28. Are samples required to get sent to a subcontract laboratory?	No	
29. Was a subcontract laboratory specified by the client and if so who?	NA	Subcontract Lab: NA

Comments/Resolution

QUESTIONS

Action 355549

QUESTIONS

Operator: TARGA MIDSTREAM SERVICES LLC 811 Louisiana Street Houston, TX 77002	OGRID: 24650
	Action Number: 355549
	Action Type: [C-141] Revegetation Report C-141 (C-141-v-Revegetation)

QUESTIONS

Prerequisites	
Incident ID (n#)	**nRM2022555694**
Incident Name	**NRM2022555694 DRINKARD 20-INCH @ 0**
Incident Type	**Release Other**
Incident Status	**Re-vegetation Report Received**
Incident Facility	**[fAPP2123021777] Targa NM Gathering System**

Location of Release Source	
Please answer all the questions in this group.	
Site Name	DRINKARD 20-INCH
Date Release Discovered	07/22/2020
Surface Owner	Private

Incident Details	
Please answer all the questions in this group.	
Incident Type	Release Other
Did this release result in a fire or is the result of a fire	No
Did this release result in any injuries	No
Has this release reached or does it have a reasonable probability of reaching a watercourse	No
Has this release endangered or does it have a reasonable probability of endangering public health	No
Has this release substantially damaged or will it substantially damage property or the environment	No
Is this release of a volume that is or may with reasonable probability be detrimental to fresh water	No

Nature and Volume of Release	
Material(s) released, please answer all that apply below. Any calculations or specific justifications for the volumes provided should be attached to the follow-up C-141 submission.	
Crude Oil Released (bbls) Details	*Not answered.*
Produced Water Released (bbls) Details	Cause: Corrosion | Pipeline (Any) | Produced Water | Released: 44 BBL | Recovered: 0 BBL | Lost: 44 BBL.
Is the concentration of chloride in the produced water >10,000 mg/l	No
Condensate Released (bbls) Details	Cause: Corrosion | Pipeline (Any) | Condensate | Released: 5 BBL | Recovered: 0 BBL | Lost: 5 BBL.
Natural Gas Vented (Mcf) Details	*Not answered.*
Natural Gas Flared (Mcf) Details	*Not answered.*
Other Released Details	Cause: Corrosion | Pipeline (Any) | [OBSOLETE] Natural Gas (Methane) | Released: 8 MCF | Recovered: 0 MCF | Lost: 8 MCF.
Are there additional details for the questions above (i.e. any answer containing Other, Specify, Unknown, and/or Fire, or any negative lost amounts)	*Not answered.*

QUESTIONS (continued)

Operator: TARGA MIDSTREAM SERVICES LLC 811 Louisiana Street Houston, TX 77002	OGRID: 24650
	Action Number: 355549
	Action Type: [C-141] Revegetation Report C-141 (C-141-v-Revegetation)

QUESTIONS

Nature and Volume of Release (continued)	
Is this a gas only submission (i.e. only significant Mcf values reported)	**No, according to supplied volumes this does not appear to be a "gas only" report.**
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	**Yes**
Reasons why this would be considered a submission for a notification of a major release	**From paragraph A. "Major release" determine using:** **(1) an unauthorized release of a volume, excluding gases, of 25 barrels or more.**
With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.	

Initial Response	
The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.	
The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	*Not answered.*
Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.	

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

I hereby agree and sign off to the above statement	Name: Amber Groves Title: Environmental Specialist Email: agroves@targaresources.com Date: 06/18/2024

QUESTIONS (continued)

Operator: TARGA MIDSTREAM SERVICES LLC 811 Louisiana Street Houston, TX 77002	OGRID: 24650
	Action Number: 355549
	Action Type: [C-141] Revegetation Report C-141 (C-141-v-Revegetation)

QUESTIONS

Site Characterization	
Please answer all the questions in this group (only required when seeking remediation plan approval and beyond). This information must be provided to the appropriate district office no later than 90 days after the release discovery date.	
What is the shallowest depth to groundwater beneath the area affected by the release in feet below ground surface (ft bgs)	Between 75 and 100 (ft.)
What method was used to determine the depth to ground water	Direct Measurement
Did this release impact groundwater or surface water	No
What is the minimum distance, between the closest lateral extents of the release and the following surface areas:	
A continuously flowing watercourse or any other significant watercourse	Between 1 and 5 (mi.)
Any lakebed, sinkhole, or playa lake (measured from the ordinary high-water mark)	Between 1 and 5 (mi.)
An occupied permanent residence, school, hospital, institution, or church	Between 1 and 5 (mi.)
A spring or a private domestic fresh water well used by less than five households for domestic or stock watering purposes	Between ½ and 1 (mi.)
Any other fresh water well or spring	Between ½ and 1 (mi.)
Incorporated municipal boundaries or a defined municipal fresh water well field	Between 1 and 5 (mi.)
A wetland	Between ½ and 1 (mi.)
A subsurface mine	Greater than 5 (mi.)
An (non-karst) unstable area	Greater than 5 (mi.)
Categorize the risk of this well / site being in a karst geology	Low
A 100-year floodplain	Greater than 5 (mi.)
Did the release impact areas not on an exploration, development, production, or storage site	Yes

Remediation Plan	
Please answer all the questions that apply or are indicated. This information must be provided to the appropriate district office no later than 90 days after the release discovery date.	
Requesting a remediation plan approval with this submission	Yes
Attach a comprehensive report demonstrating the lateral and vertical extents of soil contamination associated with the release have been determined, pursuant to 19.15.29.11 NMAC and 19.15.29.13 NMAC.	
Have the lateral and vertical extents of contamination been fully delineated	Yes
Was this release entirely contained within a lined containment area	No
Soil Contamination Sampling: (Provide the highest observable value for each, in milligrams per kilograms.)	
Chloride (EPA 300.0 or SM4500 Cl B)	9780
TPH (GRO+DRO+MRO) (EPA SW-846 Method 8015M)	6580
GRO+DRO (EPA SW-846 Method 8015M)	6140
BTEX (EPA SW-846 Method 8021B or 8260B)	0
Benzene (EPA SW-846 Method 8021B or 8260B)	0
Per Subsection B of 19.15.29.11 NMAC unless the site characterization report includes completed efforts at remediation, the report must include a proposed remediation plan in accordance with 19.15.29.12 NMAC, which includes the anticipated timelines for beginning and completing the remediation.	
On what estimated date will the remediation commence	01/18/2021
On what date will (or did) the final sampling or liner inspection occur	12/04/2023
On what date will (or was) the remediation complete(d)	12/04/2023
What is the estimated surface area (in square feet) that will be reclaimed	25000
What is the estimated volume (in cubic yards) that will be reclaimed	11470
What is the estimated surface area (in square feet) that will be remediated	25000
What is the estimated volume (in cubic yards) that will be remediated	11470
These estimated dates and measurements are recognized to be the best guess or calculation at the time of submission and may (be) change(d) over time as more remediation efforts are completed.	
The OCD recognizes that proposed remediation measures may have to be minimally adjusted in accordance with the physical realities encountered during remediation. If the responsible party has any need to significantly deviate from the remediation plan proposed, then it should consult with the division to determine if another remediation plan submission is required.

QUESTIONS

Remediation Plan (continued)	
Please answer all the questions that apply or are indicated. This information must be provided to the appropriate district office no later than 90 days after the release discovery date.	
This remediation will (or is expected to) utilize the following processes to remediate / reduce contaminants:	
(Select all answers below that apply.)	
(Ex Situ) Excavation and **off-site** disposal (i.e. dig and haul, hydrovac, etc.)	Yes
Which OCD approved facility will be used for **off-site** disposal	Sundance Services, Inc [fKJ1600527371]
OR which OCD approved well (API) will be used for **off-site** disposal	*Not answered.*
OR is the **off-site** disposal site, to be used, out-of-state	*Not answered.*
OR is the **off-site** disposal site, to be used, an NMED facility	*Not answered.*
(Ex Situ) Excavation and **on-site** remediation (i.e. On-Site Land Farms)	No
(In Situ) Soil Vapor Extraction	No
(In Situ) Chemical processing (i.e. Soil Shredding, Potassium Permanganate, etc.)	No
(In Situ) Biological processing (i.e. Microbes / Fertilizer, etc.)	No
(In Situ) Physical processing (i.e. Soil Washing, Gypsum, Disking, etc.)	No
Ground Water Abatement pursuant to 19.15.30 NMAC	No
OTHER (Non-listed remedial process)	No
Per Subsection B of 19.15.29.11 NMAC unless the site characterization report includes completed efforts at remediation, the report must include a proposed remediation plan in accordance with 19.15.29.12 NMAC, which includes the anticipated timelines for beginning and completing the remediation.	
I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.	
I hereby agree and sign off to the above statement	Name: Amber Groves Title: Environmental Specialist Email: agroves@targaresources.com Date: 06/18/2024
The OCD recognizes that proposed remediation measures may have to be minimally adjusted in accordance with the physical realities encountered during remediation. If the responsible party has any need to significantly deviate from the remediation plan proposed, then it should consult with the division to determine if another remediation plan submission is required.

QUESTIONS

Deferral Requests Only	
Only answer the questions in this group if seeking a deferral upon approval this submission. Each of the following items must be confirmed as part of any request for deferral of remediation.	
Requesting a deferral of the remediation closure due date with the approval of this submission	No

QUESTIONS (continued)

Operator: TARGA MIDSTREAM SERVICES LLC 811 Louisiana Street Houston, TX 77002	OGRID: 24650
	Action Number: 355549
	Action Type: [C-141] Revegetation Report C-141 (C-141-v-Revegetation)

QUESTIONS

Sampling Event Information	
Last sampling notification (C-141N) recorded	**355608**
Sampling date pursuant to Subparagraph (a) of Paragraph (1) of Subsection D of 19.15.29.12 NMAC	**12/04/2023**
What was the (estimated) number of samples that were to be gathered	**4**
What was the sampling surface area in square feet	**25000**

Remediation Closure Request	
Only answer the questions in this group if seeking remediation closure for this release because all remediation steps have been completed.	
Requesting a remediation closure approval with this submission	Yes
Have the lateral and vertical extents of contamination been fully delineated	**Yes**
Was this release entirely contained within a lined containment area	**No**
All areas reasonably needed for production or subsequent drilling operations have been stabilized, returned to the sites existing grade, and have a soil cover that prevents ponding of water, minimizing dust and erosion	Yes
What was the total surface area (in square feet) remediated	25000
What was the total volume (cubic yards) remediated	11470
All areas not reasonably needed for production or subsequent drilling operations have been reclaimed to contain a minimum of four feet of non-waste contain earthen material with concentrations less than 600 mg/kg chlorides, 100 mg/kg TPH, 50 mg/kg BTEX, and 10 mg/kg Benzene	Yes
What was the total surface area (in square feet) reclaimed	25000
What was the total volume (in cubic yards) reclaimed	11470
Summarize any additional remediation activities not included by answers (above)	Targa is respectfully requesting a variance for reclamation and revegetation requirements based on landowner agreement attached.

The responsible party must attach information demonstrating they have complied with all applicable closure requirements and any conditions or directives of the OCD. This demonstration should be in the form of a comprehensive report (in .pdf format) including a scaled site map, sampling diagrams, relevant field notes, photographs of any excavation prior to backfilling, laboratory data including chain of custody documents of final sampling, and a narrative of the remedial activities. Refer to 19.15.29.12 NMAC.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. The responsible party acknowledges they must substantially restore, reclaim, and re-vegetate the impacted surface area to the conditions that existed prior to the release or their final land use in accordance with 19.15.29.13 NMAC including notification to the OCD when reclamation and re-vegetation are complete.

QUESTIONS (continued)

Operator: TARGA MIDSTREAM SERVICES LLC 811 Louisiana Street Houston, TX 77002	OGRID: 24650
	Action Number: 355549
	Action Type: [C-141] Revegetation Report C-141 (C-141-v-Revegetation)

QUESTIONS

Reclamation Report	
Only answer the questions in this group if all reclamation steps have been completed.	
Requesting a reclamation approval with this submission	Yes
What was the total reclamation surface area (in square feet) for this site	25000
What was the total volume of replacement material (in cubic yards) for this site	11470
Per Paragraph (1) of Subsection D of 19.15.29.13 NMAC the reclamation must contain a minimum of four feet of non-waste containing, uncontaminated, earthen material with chloride concentrations less than 600 mg/kg as analyzed by EPA Method 300.0, or other test methods approved by the division. The soil cover must include a top layer, which is either the background thickness of topsoil or one foot of suitable material to establish vegetation at the site, whichever is greater.	
Is the soil top layer complete and is it suitable material to establish vegetation	Yes
On what (estimated) date will (or was) the reseeding commence(d)	06/18/2024
Summarize any additional reclamation activities not included by answers (above)	Targa is respectfully requesting a variance to reclamation and revegetation requirements per landowner agreement attached.
The responsible party must attach information demonstrating they have complied with all applicable reclamation requirements and any conditions or directives of the OCD. This demonstration should be in the form of attachments (in .pdf format) including a scaled site map, any proposed reseeding plans or relevant field notes, photographs of reclaimed area, and a narrative of the reclamation activities. Refer to 19.15.29.13 NMAC.	
I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. 	Action Type: [C-141] Revegetation Report C-141 (C-141-v-Revegetation)

QUESTIONS

Revegetation Report	
Only answer the questions in this group if all surface restoration, reclamation and re-vegetation obligations have been satisfied.	
Requesting a restoration complete approval with this submission	Yes
What was the total revegetation surface area (in square feet) for this site	25000
Per Paragraph (2) of Subsection D of 19.15.29.13 NMAC the responsible party must reseed disturbed area in the first favorable growing season following closure of the site.	
On what date did the reseeding commence	06/18/2024
On what date was the vegetative cover inspected	06/18/2024
What was the life form ratio compared to pre-disturbance levels	90
What was the total percent plant cover compared to pre-disturbance levels	90
Summarize any additional revegetation activities not included by answers (above)	Targa is respectfully requesting a variance to reclamation and revegetation requirements per landowners agreement attached.
The responsible party must attach information demonstrating they have complied with all applicable re-vegetation requirements and any conditions or directives of the OCD. This demonstration should be in the form of attachments (in .pdf format) including a scaled site map, any life form ratio and percent plant cover sampling diagrams or other relevant field notes, photographs of re-vegetated areas, and a narrative of the re-vegetation activities. Refer to 19.15.29.13 NMAC.
