NMOCD Incident IDs nRM2026532878 & nAPP2118853816

The first incident was a crude oil and produced water mixed release that was discovered by the operator on September 9, 2020. The initial C-141 was submitted on September 21, 2020 (OCD Permitting: Application ID 10174). This incident was assigned Incident ID nRM2026532878 by the New Mexico Oil Conservation Division (NMOCD).

The second incident was a produced water release that was discovered by the operator on June 16, 2021. The initial Notification of Release and C-141 were submitted on July 7, 2021 (OCD Permitting: Applications [35385] and [35394]). This incident was assigned Incident ID nAPP2118853816 by the New Mexico Oil Conservation Division (NMOCD).

Release Information

nRM2026532878: On September 9, 2020, trapper box failed causing fluid release. Approximately 4 barrels (bbls) of crude oil and 6 bbls of produced water was released and 9 bbls were recovered via vacuum truck. For this release, the previously rejected closure report can be found in OCD Permitting: Application ID 164384.

nAPP2118853816: On June 16, 2021, a valve washed out on well causing fluid release. Approximately 20.42 barrels (bbls) of produced water were released and 20 bbls were recovered via vacuum truck.

Site Information and Site Characterization

The Regulus 26 Fed 5H Wellpad (Regulus) is located approximately fifteen (15) miles southeast of Loco Hills, NM. The release area on the wellpad is in Unit A, Section 26, Township 19S, Range 31E, Latitude 32.637432 Longitude -103.833465, Eddy County, NM. A Location Map can be found in Figure 3.

Per the New Mexico Bureau of Geology and Mineral Resources, the geology in this area is made up of eolian and piedmont deposits; Interlayered eolian sands and piedmont-slope deposits along the eastern flank of the Pecos River valley, primarily between Roswell and Carlsbad. Typically capped by thin eolian deposits. The soil in this area is made up of Wink loamy fine sand, 0 to 3 percent slopes, eroded according to the United States Department of Agriculture Natural Resources Conservation Service soil survey. The drainage class in this area is: well drained (Appendix B). A Topographic Map can be found in Figure 4. The nearest surface water feature is a salt pond located approximately 3.52 miles to the south of this site. There is a low potential for karst geology to be present around the Regulus (Figure 5).

According to the New Mexico Office of the State Engineer, depth to the nearest groundwater in this area is 130 feet below grade surface (BGS). According to the United States Geological Survey well water data, depth to the nearest groundwater in this area is 142 feet BGS. The groundwater information from CP-01939 POD1 establishes a lack of groundwater at 55' bgs. This POD was drilled and recorded by Atkins Engineering Associates, INC. on April 6, 2023. The well bore was left open for the required 72-hour timeframe then checked for saturation. No saturation or water-bearing soil was encountered, the well was then plugged on April 18, 2023. Depth to groundwater at the Regulus will be classified as 51-100' BGS. Referenced water surveys, pod information, and water-related maps can be found in Appendix A.

Delineation Activities

On June 18, 2021, Pima personnel mobilized to the site to begin delineation activities. Samples for vertical delineation were collected from 6 different sample points from depths of 0-6", 2', and 4' bgs. Vertical delineation was not completed at this time for sample points S1 and S2. Horizontal delineation was not completed at this time. The release area measures approximately 4,291 square feet and affects approximately 159 cubic yards of soil. The release remained on the engineered pad, which is still needed for subsequent production and/or drilling purposes.

On May 16, 2024, Pima personnel returned to the site to complete the delineation of this release area. 5-point composite horizontal delineation samples were collected from SW1 through SW8. Each composite sample consisted of 1', 2', 3', 4', and 5' samples. Additionally, further investigation was conducted at S1 and S2 to determine vertical delineation. Discreet samples were collected from 1' and 5' at these sample points.

Complete Site Characterization and Delineation Activities documents for nRM2026532878 can be found in the previously approved Remediation Plan at OCD Online: Permitting – Action Status, under the Application ID: 350383.

Complete Site Characterization and Delineation Activities documents for nAPP2118853816 can be found in the previously approved Remediation Plan at OCD Online: Permitting – Action Status, under the Application ID: 350484.

Remediation Activities & Countermeasures to Closure Rejection

nRM2026532878: On June 17, 2024, Pima Environmental and the Devon construction department mobilized personnel and equipment to the location to begin excavating all the previously bioremediated soil from the release area. A 204 square foot section near the wellhead was excavated to a depth of 3' bgs while the remainder of the area was excavated to a depth of 1' bgs. Clean, fresh backfill material was brought back to the site and stockpiled to be used to backfill the excavation.

nAPP2118853816: On June 17, 2024, Pima Environmental and the Devon construction department mobilized personnel and equipment to the location to begin excavating the release area. The entire impacted area was excavated to a depth of 1' bgs. Clean, fresh backfill material was brought back to the site and stockpiled to be used to backfill the excavation.

The total combined soil removed during this excavation was approximately 210 cubic yards. The combined area measured approximately 5,192 square feet, and depths were approximately 1' and 3' bgs. Photographic Documentation can be found in Appendix D.

On June 26, 2024, after Devon had submitted a 48-Hour sampling notification for each incident (Appendix C), confirmation sampling was performed for the entire combined excavation. The sampling notification for nRM2026532878 can be found in OCD Online: Permitting – Action Status, under the application ID: 356947. The sampling notification for nAPP2118853816 can be found in OCD Online: Permitting – Action Status, under the application ID: 356949. Twenty-six confirmation composite base samples were collected from the base of the excavation and seven confirmation composite wall samples were collected from the walls of the excavation. Each sample collected was representative of no more than a 200 square feet area. After collection, each sample was immediately put on ice, jarred, and delivered to Envirotech Labs for official testing. All samples were analyzed for all constituents listed on Table 1 19.15.29.12 NMAC.

A Data Table representing sample results for the confirmation sampling event can be found in Figure 1. A corresponding Confirmation Sample Map can be found in Figure 2. A complete Laboratory Report can be found in Appendix E.

Remediation Closure Request

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:20,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Web Soil Survey URL:

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Eddy Area, New Mexico

Survey Area Data: Version 19, Sep 7, 2023

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Feb 7, 2020—May 12, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

QUESTIONS (continued)

Operator: DEVON ENERGY PRODUCTION COMPANY, LP 333 West Sheridan Ave. Oklahoma City, OK 73102	OGRID:	6137
	Action Number:	364271
	Action Type:	[C-141] Remediation Closure Request C-141 (C-141-v-Closure)

QUESTIONS

Nature and Volume of Release (continued)	
Is this a gas only submission (i.e. only significant Mcf values reported)	No, according to supplied volumes this does not appear to be a "gas only" report.
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	No
Reasons why this would be considered a submission for a notification of a major release	Unavailable.
With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.	

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.

The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	False
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	Spill was not in containment.

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Have the lateral and vertical extents of contamination been fully delineated	Yes
Was this release entirely contained within a lined containment area	No

Soil Contamination Sampling: (Provide the highest observable value for each, in milligrams per kilograms.)

Chloride (EPA 300.0 or SM4500 Cl B)	32.4

Per Subsection B of 19.15.29.11 NMAC unless the site characterization report includes completed efforts at remediation, the report must include a proposed remediation plan in accordance with 19.15.29.12 NMAC, which includes the anticipated timelines for beginning and completing the remediation.

On what estimated date will the remediation commence	06/17/2024
On what date will (or did) the final sampling or liner inspection occur	06/26/2024
On what date will (or was) the remediation complete(d)	07/08/2024
What is the estimated surface area (in square feet) that will be reclaimed	0
What is the estimated volume (in cubic yards) that will be reclaimed	0
What is the estimated surface area (in square feet) that will be remediated	5192
What is the estimated volume (in cubic yards) that will be remediated	210

These estimated dates and measurements are recognized to be the best guess or calculation at the time of submission and may (be) change(d) over time as more remediation efforts are completed.

The OCD recognizes that proposed remediation measures may have to be minimally adjusted in accordance with the physical realities encountered during remediation. If the responsible party has any need to significantly deviate from the remediation plan proposed, then it should consult with the division to determine if another remediation plan submission is required.

The responsible party must attach information demonstrating they have complied with all applicable closure requirements and any conditions or directives of the OCD. This demonstration should be in the form of a comprehensive report (in .pdf format) including a scaled site map, sampling diagrams, relevant field notes, photographs of any excavation prior to backfilling, laboratory data including chain of custody documents of final sampling, and a narrative of the remedial activities.
