RE: Proposed Sampling Plan Report
Shugart 23 Federal Com #001
API No. 30-015-30448 Raybaw Operating, LLC [330220]
Surface Location: J - 23 - 18S - 31E 1650 FSL 1980 FEL
Lat/Long: 32.7303581, -103.838028 NAD83
NMOCD Incident IDs - nMLB0912449922 & nMLB1125557019

Raybaw Operating, LLC (Raybaw) has contracted Saptec-Eco, LLC (Saptec) to prepare this proposed sampling plan for two (2) historic open release areas at the Shugart 23 Federal Com #001 (Shugart).

Release Information

nMLB0912449922: On April 23, 2009, discovered hole in bottom of tank caused by internal corrosion. Will air out area, rake, and fertilize. 70' x 20' air out area, rake, and fertilize. Will repeat if necessary. Released 40 barrels (bbls) of crude oil, recovered 11 bbls. This incident was assigned incident ID nMLB0912449922 by the New Mexico Oil Conservation Division (NMOCD). The initial C-141 form (Appendix C) was submitted on April 24, 2009, then approved by the NMOCD on May 4, 2009.

nMLB1125557019: On September 4, 2011, Hole in oil tank. Immediately, a vacuum truck was used to pick up the spill. 31 bbls were recovered out of 70 bbls. 60' x 20' in containment area. Our plan includes moving the oil tanks and rebuilding the battery at another part of the location and soil remediation will be completed in the spill area. This incident was assigned incident ID nMLB1125557019 by the NMOCD. The initial C-141 form (Appendix C) was submitted on September 6, 2011, then approved by the NMOCD on September 12, 2011.

Site Characterization

The Shugart is in Eddy County, NM approximately ten (10) miles southeast of Loco Hills, NM. This release site is in Unit J, Section 23, Township 18S, Range 31E, at GPS coordinates 32.7303581 latitude and -103.838028 longitude. It can be accessed by a lease road that bears entry from the southwest. A Location Map can be referenced in Figure 6.

Per the New Mexico Bureau of Geology and Mineral Resources, the geology in this area is Eolian and piedmont deposits. Interlayered eolian sands and piedmont-slope deposits along the eastern flank of the Pecos River valley, primarily between Roswell and Carlsbad. Typically capped by thin eolian deposits. Appendix B contains a Geologic Unit Map for reference.

The soil in this area, according to the United States Department of Agriculture Natural Resources Conservation Service soil survey, is made up of Berino-Parajito complex, having 0 to 3 percent slopes, eroded. The drainage class in this area is well drained. There is a low potential for karst geology to be present around the Shugart (Figure 4) with the nearest medium karst zone being 4 miles away. Soil Survey and Geological Data can be found in Appendix B. A Topographic Map can be referenced in Figure 5.

This site is in a known Lesser Prairie Chicken or Sand Dune Lizard habitat. It is in an Isolated Population Area within an LPC Timing Restriction Area zone, according to the LPC Timing Area 2021 Southern Map courtesy of the Bureau of Land Management. Any work to be done on this site between March 1, and June 15, will strictly adhere to the Timing Restrictions regulation. LPC-Dune Lizard Maps can be referenced in Figure 7.

This site is not within a special plant species habitat but is within 5 miles of the habitats for Scheer's Beehive Cactus and Tharp's Blue-Star. A Plant/Wildlife Map can be found in Figure 8.

According to the New Mexico Office of the State Engineer, depth to the nearest groundwater in this area is greater than 100 feet below grade surface (bgs). This data was recorded from CP-02011-POD1, which is located approximately 4.49 miles away from the Shugart. According to the United States Geological Survey, well water data from USGS 324502103495801 18S.31E.14.22133 records depth to the nearest groundwater at 378 feet bgs, with the last gauge being conducted in 1994. This well is approximately 1.3 miles away from the Shugart. All referenced Water Surveys and Water-Related Maps can be found in Appendix A.

The nearest surface water feature is Hackberry Lake located approximately 8.33 miles to the southwest of this site. The U.S. Fish and Wildlife Service National Wetlands Inventory shows the nearest wetland to be a Freshwater Pond approximately 4.45 miles to the northeast of this area. According to Fema's National Flood Hazard Layer search, the Shugart is situated in Zone X – Area of Minimal Flood Hazard. Closure criteria for this site will be classified under the less than 50-foot depth to groundwater section of Table 1 19.15.29.12 NMAC.

Previous Remediation Activities

On October 11, 2011, EnviroClean Products & Services mobilized to the site to collect soil samples for assessing the extent of the release area. These samples were collected from the tank battery area after the tanks and plumbing had been removed. The samples were put on ice, jarred, then delivered to Cardinal Laboratories for official analysis of BTEX and Total TPH.

On February 5, 2012, EnviroClean personnel returned to the site to begin remediation activities. The method of remediation consisted of excavation combined with in-situ bioremediation. An EnviroClean Summary inclusive of sample results, a description of remediation activities, a site map, and photographs (black & white) can be referenced in Figure 1. Complete Laboratory Reports can be found in Appendix E.

On July 3, 2012, Devon submitted the EnviroClean Sampling and Site Remediation Report for closure of the nMLB1125557019 incident.

On July 14, 2015, the NMOCD responded to the report with a denial requiring the site to be resampled to complete delineation and follow up on the bioremediation with confirmation sampling.

On July 8, 2020, Pima Environmental Services conducted a site assessment and obtained soil samples.

On August 21, 2020, Pima personnel returned to the site to apply a MicroBlaze treatment to the area. After allowing 60 days for the microbes to take effect, they returned to the site to resample. A Pima Summary inclusive of sample results, a description of remediation activities, a site map, and photographs can be referenced in Figure 2. Complete Laboratory Reports can be found in Appendix E.

On December 14, 2020, Devon submitted the Pima closure report for closure of both associated incidents, nMLB0912449922 and nMLB1125557019.

On January 12, 2023, the NMOCD denied both closure requests citing:

amaxwell (1/12/2023), The depth to groundwater has not been adequately determined. When nearby wells are used to determine depth to groundwater, the wells should be no further than ½ mile away from the site, and data should be no more than 25 years old, and well construction information should be provided in the submission. The responsible party may choose to remediate to the most stringent levels listed in Table 1 of 19.15.29 NMAC in lieu of drilling to determine the depth to groundwater.

amaxwell (1/12/2023), Horizontal and vertical delineation submitted was incomplete and did not meet the requirements of 19.15.29.11 NMAC. The values for determination of horizontal impact are derived by either approved "background" values or Table I Closure Criteria for releases where groundwater is at a depth of 50 feet or less. This is especially important for "on-pad" releases to ensure the release did not extend to the "off-pad"/pasture area. A visual footprint on the surface is not sufficient to assess the horizontal extent of the release. Laboratory data must be provided as evidence of delineation efforts. Any sample exceeding approved "background" values or Table I Closure Criteria for releases where groundwater is at a depth of 50 feet or less requires additional samples for horizontal delineation.

amaxwell (1/12/2023), Submit a work plan via the OCD permitting portal by 04/23/2023.

Regarding the 2 previous bioremediation methods, no documentation was found verifying their pre-approval by the NMOCD. As a result, the proposed sampling below will be conducted to demonstrate the current status of the impacted areas.

In response to the denied closure requests for both incidents, Raybaw would like to submit this following plan:

Proposed Sampling Plan

1. Submit a 48-Hour Notification of Sampling event to the NMOCD. Also, please see the variance requests below.
2. Collect discrete samples from eleven (24) sample points within the previously treated areas and the ex-situ treatment cell area. These samples will be collected from each sample point at depth intervals of surface, 1', 2', 3', and 4' bgs. The samples that will be collected from around the secondary tank containment should be angled underneath the containment as much as safely possible to represent the previously treated soil.

3. Collect discrete samples from eight (16) sample points from around the edges of the previously treated areas and the ex-situ treatment cell area. These samples will also be collected from each sample point at depth intervals of surface, 1', 2', 3', and 4' bgs. A Proposed Sampling Map can be referenced in Figure 3.
4. A total of 200 samples will be put on ice, prepared for delivery, then delivered to Envirotech Analytical Laboratories for official analysis of all constituents listed in Table 1 19.15.29.12 NMAC.
5. Once lab results have been received and all data has been assessed, any sample results verifying contamination is present over the regulatory limits of the less than 50-foot depth to groundwater section of Table 1 19.15.29.12 NMAC, will be remediated by methods of hand-tool and/or mechanical excavation. Area and volume calculations will be completed at that time.
6. After removing any existing contamination, a 48-Hour notification of confirmation sampling event will be submitted, and confirmation composite samples will be collected from all excavated areas representing no more than 200 square feet each. These samples will be collected from the base and walls of all excavated areas.
7. All samples will be put on ice, prepared for delivery, then delivered to Envirotech Analytical Laboratories for official analysis of all constituents listed in Table 1 19.15.29.12 NMAC.
8. Once lab results are received, if samples are verified to be under the regulatory limits of the less than 50-foot depth to groundwater section of Table 1, a final closure report will be drafted and submitted to the Portal for approval.

Variance Request

Raybaw would like to request a variance to use the delineation samples as confirmation samples in the following situation: If after step 4 of this plan, the lab sample results reported for the delineation samples, verify contamination levels are under the regulatory limits of the less than 50-foot depth to groundwater section of Table 1, then a final closure report will be drafted and submitted to the Portal for approval.

Raybaw would like to also request a variance regarding the number of samples required from the ex-situ treatment cell area for this investigative sampling event. The treatment area was approximately 4,765 feet squared, requiring 24 samples from within the area and had a perimeter of 298 linear feet requiring 4 samples from around the edges of the area, following the 200 square foot rule. We believe we can obtain an accurate representation of the ex-situ treatment area by collecting samples from every 400 square feet from within the treatment area. The number of samples collected from the edges of the area will increase to 8 samples. The illustration of these samples can be seen on the Proposed Sampling map included in Figure 3.

Approval Request

Raybaw respectfully requests that this proposed sampling plan for the two remaining open historic incidents, nMLB0912449922 and nMLB1125557019, be approved. Raybaw has complied with the applicable requirements outlined in 19.15.29.12 NMAC.

Should you have any questions or need additional information, please feel free to contact:

2/5/12

1:00 p.m. Arrive at the yard. Load equipment and supplies.

1:40 p.m. Depart from the yard en route to the hotel.

11:30 p.m. Arrive at the hotel in New Mexico.

2/6/12

4:00 p.m. Depart from another location en route to the location.

4:20 p.m. Arrive on the location, unload equipment, and hold safety meeting.

4:30 p.m. Begin excavating the impacted soil inside of the tank battery with the mini-excavator to a maximum depth of 3'. Begin building a bio-cell to contain the excavated impacted soil.

5:30 p.m. Completed building the berm for the bio-cell. Begin hauling the impacted soil from the tank battery to the bio-cell with a tractor loader.

6:50 p.m. Discontinued operations. Depart from the location en route to the hotel.

7:30 p.m. Arrive at the hotel.

2/7/12

- 6:00 a.m. Depart from the hotel en route to the location.
- 7:00 a.m. Arrive on the location. Hold safety meeting.
- 7:10 a.m. Resume excavating the impacted soil inside of the tank battery and hauling the impacted soil to the bio-cell. The impacted soil in the bio-cell will be spread at a depth of 6-8 inches.
- 9:30 a.m. Completed excavating. Begin tilling the base of the excavation with the tracloader and tiller attachment. Begin scraping and stockpiling soil from the location. The soil will be used as backfill for the excavation.
- 12:10 p.m. Completed tilling the base of the excavation. Begin tilling the impacted soil in the bio-cell.
- 1:45 p.m. Completed tilling the impacted soil in the bio-cell. Begin treating the base of the excavation with an EnviroClean solution.
- EnviroClean is a blend of surfactants and wetting agents that is listed on the EPA's National Contingency Plan (NCP) as a Surface Washing Agent. Treating with the EnviroClean desorbs and breaks up the hydrocarbon in the soil in a manner that makes it more available to the naturally occurring bacteria to utilize it as a food source. This increase in bioavailability expedites the time frame in which the hydrocarbons are biodegraded in the soil.
- 3:45 p.m. Completed treating the base of the excavation. Begin treating the impacted soil in the bio-cell with an EnviroClean solution. Begin backfilling the excavated area utilizing clean soil that was stockpiled from the location.
- 5:30 p.m. Completed treating the impacted soil in the bio-cell. Completed backfilling. Depart from the location en route to the hotel.
- 7:00 p.m. Arrive at the hotel.

Request for Incident Closure

Re: Site Assessment and Closure Report
Shugart 23 Fed Com #1
API No. 30-015-30448
GPS: Latitude 32.7303581 Longitude -103.838028
UL "J", Sec. 23, T18S, R31E
Eddy County, NM
NMOCD Ref. No. 2RP-896

Pima Environmental Services, LLC (Pima) has been contracted by Devon Energy Production Company (Devon) to perform a spill assessment and has prepared this Closure Report for an oil and produced water release that occurred at the Shugart 23 Fed Com 1 (Shugart). The initial C-141 was submitted on 9-12-11 (Appendix C). This incident was assigned 2RP-896, Incident ID NMLB1125557019 by the New Mexico Oil Conservation Division (NMOCD).

Site Characterization

The Shugart is located approximately thirty-one (31) miles northeast of Carlsbad, NM. This spill site is in Unit J, Section 23, Township 18S, Range 31E, Latitude 32.7303581, Longitude -103.838028, Eddy County, NM.

Release Information

2RP-896: On September 4, 2011, a hole in the tank was discovered and released 70 bbls of oil. A vac truck was dispatched and recovered the 31 bbls of oil.

Site Assessment and Soil Sampling Results

On July 8, 2020, Pima Environmental conducted a site assessment and obtained soil samples. The laboratory results of this sampling event can be found in the following data table.

7-8-20 Sampling Event

ND-Analyte Not Detected

Closure Request

After careful review, Pima requests that the incident, NMLB1125557019, be closed. Devon has complied with the applicable closure requirements.

Should you have any questions or need additional information, please feel free to contact Chris Jones at 575-964-7740 or chris@pimaoil.com.

Respectfully,

Chris Jones

Soil Survey

Soil Map

Geologic Unit Map

Map Unit Description: Berino-Pajarito complex, 0 to 3 percent slopes, eroded---Eddy Area,
New Mexico

Eddy Area, New Mexico

BP—Berino-Pajarito complex, 0 to 3 percent slopes, eroded

Map Unit Setting

National map unit symbol: 1w45

Elevation: 2,450 to 4,200 feet

Mean annual precipitation: 5 to 15 inches

Mean annual air temperature: 57 to 70 degrees F

Frost-free period: 190 to 250 days

Farmland classification: Not prime farmland

Map Unit Composition

Berino and similar soils: 46 percent

Pajarito and similar soils: 45 percent

Minor components: 9 percent

Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Berino

Setting

Landform: Plains, fan piedmonts

Landform position (three-dimensional): Riser

Down-slope shape: Convex

Across-slope shape: Linear

Parent material: Mixed alluvium and/or eolian sands

Typical profile

H1 - 0 to 17 inches: fine sand

H2 - 17 to 50 inches: sandy loam

H3 - 50 to 60 inches: loamy sand

Properties and qualities

Slope: 0 to 3 percent

Depth to restrictive feature: More than 80 inches

Drainage class: Well drained

Runoff class: Low

Capacity of the most limiting layer to transmit water

(Ksat): Moderately high to high (0.60 to 2.00 in/hr)

Depth to water table: More than 80 inches

Frequency of flooding: None

Frequency of ponding: None

Calcium carbonate, maximum content: 40 percent

Maximum salinity: Very slightly saline to slightly saline (2.0 to 4.0 mmhos/cm)

Sodium adsorption ratio, maximum: 1.0

Available water supply, 0 to 60 inches: Moderate (about 7.3 inches)

Interpretive groups

Land capability classification (irrigated): 4e

Map Unit Description: Berino-Pajarito complex, 0 to 3 percent slopes, eroded---Eddy Area,
New Mexico

Land capability classification (nonirrigated): 7e
Hydrologic Soil Group: B
Ecological site: R070BD003NM - Loamy Sand
Hydric soil rating: No

Description of Pajarito

Setting

Landform: Plains, interdunes, dunes
Landform position (three-dimensional): Side slope
Down-slope shape: Convex, linear
Across-slope shape: Linear, convex
Parent material: Mixed alluvium and/or eolian sands

Typical profile

H1 - 0 to 9 inches: loamy fine sand
H2 - 9 to 36 inches: fine sandy loam
H3 - 36 to 72 inches: fine sandy loam

Properties and qualities

Slope: 0 to 3 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Well drained
Runoff class: Very low
Capacity of the most limiting layer to transmit water (Ksat): High
(2.00 to 6.00 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 15 percent
Maximum salinity: Nonsaline to very slightly saline (0.0 to 2.0
mmhos/cm)
Sodium adsorption ratio, maximum: 1.0
Available water supply, 0 to 60 inches: Moderate (about 8.0
inches)

Interpretive groups

Land capability classification (irrigated): 2e
Land capability classification (nonirrigated): 7e
Hydrologic Soil Group: A
Ecological site: R070BD003NM - Loamy Sand
Hydric soil rating: No

Minor Components

Wink

Percent of map unit: 3 percent
Ecological site: R070BD003NM - Loamy Sand

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:20,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service

Web Soil Survey URL:

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Eddy Area, New Mexico

Survey Area Data: Version 20, Sep 3, 2024

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Feb 7, 2020—May 12, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Subject: Shugart 23 Fed Com 1/TNT 6 Fed 1
Date: Wednesday, July 15, 2015 7:10:00 AM

Mr. Fulks,

I have just reviewed and denied two older closure reports for Devon that I wanted to inform you about. These were releases that were bio remediated in 2012 by Enviroclean. It looks like the work was done properly, but they lack adequate delineation, and no follow up confirmation samples were reported to the OCD. In order to close these out, the OCD will require the sites be resampled. Depending on what those samples return, more work may be required. You can find the reports on OCD online imaging (<http://ocdimage.emnrd.state.nm.us/imaging/AEOrderCriteria.aspx>).

Here are the details:

TNT 6 Federal #1 * 30-015-31712 * Date of release: 2/2/2011 * 10bbl/oil, 13bbl/produced water *
OCD tracking number: 2RP-614

Shugart 23 Federal Com #1 * 30-015-30448 * Date of release: 9/4/2011 * 70bbl/oil * OCD tracking
number: 2RP-896

Good Morning Tom,

Yes, in the report, refer to no documentation found regarding approval of the ex situ remediation. As a result, sampling is being conducted to demonstrate the current status of impacted area. With the added language and the additional sampling, please submit the revised report via the OCD permitting portal.

Thanks,
Ashley

CAUTION: This email originated outside of our organization. Exercise caution prior to clicking on links or opening attachments.

Good morning Ashley,
Regarding the rejected sampling/remediation plan mentioned below:

We do not have documentation showing approval of any treatment for either incident (nMLB0912449922 & nMLB112555719). If phone conversations took place in 2012 and/or in 2020, follow up emails to those could not be found. We can adjust the report to include statements about the methods not being approved. Is that all you would need for this bullet point? The only documented correspondence we have found for either incident is included in Appendix C of the report.

I have adjusted the proposed sampling map to include samples from the ex-situ treatment cell area and have added language in the report reflecting this adjustment.

Are these the correct steps taken to gain approval of our sampling/work plan? Please advise.

Many thanks,

Tom Bynum

To: Michael Lee <michael@raybawoperating.com>

Subject: The Oil Conservation Division (OCD) has rejected the application, Application ID: 414814

To whom it may concern (c/o Michael Lee for RAYBAW Operating, LLC),

The OCD has rejected the submitted *Application for administrative approval of a release notification and corrective action* (C-141), for incident ID (n#) nMLB1125557019, for the following reasons:

- **Remediation plan rejected**
- **Incident documents do not include approval of approval for MicroBlaze application and/or ex situ treatment cell. If documentation of approval exists, provide documentation in subsequent reports.**
- **Additional sampling required within and around the ex situ treatment cell. A minimum of the top 4 feet must be sampled to ensure that the constituents of concern were not flushed down into the soil.**
- **Submit a report via the OCD permitting portal by January 31, 2025.**

The rejected C-141 can be found in the OCD Online: Permitting - Action Status, under the Application ID: 414814.

Please review and make the required correction(s) prior to resubmitting.

If you have any questions why this application was rejected or believe it was rejected in error, please contact me prior to submitting an additional C-141.

Thank you,

Ashley Maxwell

RE: SHUGART 23 FED COM 1

Enclosed are the results of analyses for samples received by the laboratory on 10/11/11 17:26.

Cardinal Laboratories is accredited through Texas NELAP for:

Method SW-846 8021	Benzene, Toluene, Ethyl Benzene, and Total Xylenes
Method SW-846 8260	Benzene, Toluene, Ethyl Benzene, and Total Xylenes
Method TX 1005	Total Petroleum Hydrocarbons

Certificate number T104704398-08-TX. Accreditation applies to solid and chemical materials and non-potable water matrices.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read "Celey D. Keene", written in a cursive style.

RE: Shuqart 23 Fed Com#1

OrderNo.: 2007413

Dear Chris Jones:

Hall Environmental Analysis Laboratory received 38 sample(s) on 7/9/2020 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

Refer to the QC Summary report and sample login checklist for flagged QC data and preservation information.

Qualifiers:	*	Value exceeds Maximum Contaminant Level.	B	Analyte detected in the associated Method Blank
	D	Sample Diluted Due to Matrix	E	Value above quantitation range
	H	Holding times for preparation or analysis exceeded	J	Analyte detected below quantitation limits
	ND	Not Detected at the Reporting Limit	P	Sample pH Not In Range
	PQL	Practical Quantitative Limit	RL	Reporting Limit
	S	% Recovery outside of range due to dilution or matrix

RE: Shugarts 23 Fed Com 1

OrderNo.: 2010A67

Dear Chris Jones:

Hall Environmental Analysis Laboratory received 3 sample(s) on 10/22/2020 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites. In order to properly interpret your results, it is imperative that you review this report in its entirety. See the sample checklist and/or the Chain of Custody for information regarding the sample receipt temperature and preservation. Data qualifiers or a narrative will be provided if the sample analysis or analytical quality control parameters require a flag. When necessary, data qualifiers are provided on both the sample analysis report and the QC summary report, both sections should be reviewed. All samples are reported, as received, unless otherwise indicated. Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH and residual chlorine are qualified as being analyzed outside of the recommended holding time.

Please don't hesitate to contact HEAL for any additional information or clarifications.

ADHS Cert #AZ0682 -- NMED-DWB Cert #NM9425 -- NMED-Micro Cert #NM0901

Sincerely,

A handwritten signature in black ink, appearing to read "Andy Freeman", is written over a light blue horizontal line.

RE: SHUGART 23 FED COM #1

Enclosed are the results of analyses for samples received by the laboratory on 11/30/20 12:30.

Cardinal Laboratories is accredited through Texas NELAP under certificate number T104704398-20-13. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at

www.tceq.texas.gov/field/ga/lab_accred_certif.html.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Total Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Cardinal Laboratories is accredited through the State of New Mexico Environment Department for:

Method SM 9223-B	Total Coliform and E. coli (Colilert MMO-MUG)
Method EPA 524.2	Regulated VOCs and Total Trihalomethanes (TTHM)
Method EPA 552.2	Total Haloacetic Acids (HAA-5)

Accreditation applies to public drinking water matrices for State of Colorado and New Mexico.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Celey D. Keene

Location of Release Source

Please answer all the questions in this group.

Site Name	SHUGART 23 FED COM #1
Date Release Discovered	09/04/2011
Surface Owner	Federal

Incident Details

Please answer all the questions in this group.

Incident Type	Oil Release
Did this release result in a fire or is the result of a fire	No
Did this release result in any injuries	No
Has this release reached or does it have a reasonable probability of reaching a watercourse	No
Has this release endangered or does it have a reasonable probability of endangering public health	No
Has this release substantially damaged or will it substantially damage property or the environment	No
Is this release of a volume that is or may with reasonable probability be detrimental to fresh water	No

Nature and Volume of Release

Material(s) released, please answer all that apply below. Any calculations or specific justifications for the volumes provided should be attached to the follow-up C-141 submission.

Crude Oil Released (bbls) Details	Cause: Corrosion Production Tank Crude Oil Released: 70 BBL Recovered: 31 BBL Lost: 39 BBL.
Produced Water Released (bbls) Details	Not answered.
Is the concentration of chloride in the produced water >10,000 mg/l	Not answered.
Condensate Released (bbls) Details	Not answered.
Natural Gas Vented (Mcf) Details	Not answered.
Natural Gas Flared (Mcf) Details	Not answered.
Other Released Details	Not answered.
Are there additional details for the questions above (i.e. any answer containing Other, Specify, Unknown, and/or Fire, or any negative lost amounts)	Not answered.

QUESTIONS

Nature and Volume of Release (continued)	
Is this a gas only submission (i.e. only significant Mcf values reported)	No, according to supplied volumes this does not appear to be a "gas only" report.
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	Yes
Reasons why this would be considered a submission for a notification of a major release	From paragraph A. "Major release" determine using: (1) an unauthorized release of a volume, excluding gases, of 25 barrels or more.
With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.	

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.

The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	Not answered.

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

I hereby agree and sign off to the above statement	Name: Michael Lee Title: COO Email: michael@raybawoperating.com Date: 12/31/2024

QUESTIONS, Page 3

Action 415979

QUESTIONS (continued)

Operator: RAYBAW Operating, LLC 2626 Cole Avenue Dallas, TX 75204	OGRID: 330220
	Action Number: 415979
	Action Type: [C-141] Site Char./Remediation Plan C-141 (C-141-v-Plan)

QUESTIONS**Site Characterization**

Please answer all the questions in this group (only required when seeking remediation plan approval and beyond). This information must be provided to the appropriate district office no later than 90 days after the release discovery date.

What is the shallowest depth to groundwater beneath the area affected by the release in feet below ground surface (ft bgs)	Between 100 and 500 (ft.)
What method was used to determine the depth to ground water	NM OSE iWaters Database Search
Did this release impact groundwater or surface water	No
What is the minimum distance, between the closest lateral extents of the release and the following surface areas:	
A continuously flowing watercourse or any other significant watercourse	Between 1 and 5 (mi.)
Any lakebed, sinkhole, or playa lake (measured from the ordinary high-water mark)	Greater than 5 (mi.)
An occupied permanent residence, school, hospital, institution, or church	Greater than 5 (mi.)
A spring or a private domestic fresh water well used by less than five households for domestic or stock watering purposes	Between 1 and 5 (mi.)
Any other fresh water well or spring	Between 1 and 5 (mi.)
Incorporated municipal boundaries or a defined municipal fresh water well field	Greater than 5 (mi.)
A wetland	Between 1 and 5 (mi.)
A subsurface mine	Greater than 5 (mi.)
An (non-karst) unstable area	Greater than 5 (mi.)
Categorize the risk of this well / site being in a karst geology	Low
A 100-year floodplain	Greater than 5 (mi.)
Did the release impact areas not on an exploration, development, production, or storage site	No

Remediation Plan

Please answer all the questions that apply or are indicated. This information must be provided to the appropriate district office no later than 90 days after the release discovery date.

Requesting a remediation plan approval with this submission	Yes
<i>Attach a comprehensive report demonstrating the lateral and vertical extents of soil contamination associated with the release have been determined, pursuant to 19.15.29.11 NMAC and 19.15.29.13 NMAC.</i>	
Have the lateral and vertical extents of contamination been fully delineated	Yes
Was this release entirely contained within a lined containment area	No

Soil Contamination Sampling: (Provide the highest observable value for each, in milligrams per kilograms.)

Chloride (EPA 300.0 or SM4500 Cl B)	1800
TPH (GRO+DRO+MRO) (EPA SW-846 Method 8015M)	94590
GRO+DRO (EPA SW-846 Method 8015M)	91680
BTEX (EPA SW-846 Method 8021B or 8260B)	635.5
Benzene (EPA SW-846 Method 8021B or 8260B)	17.5

Per Subsection B of 19.15.29.11 NMAC unless the site characterization report includes completed efforts at remediation, the report must include a proposed remediation plan in accordance with 19.15.29.12 NMAC, which includes the anticipated timelines for beginning and completing the remediation.

On what estimated date will the remediation commence	02/15/2025
On what date will (or did) the final sampling or liner inspection occur	02/22/2025
On what date will (or was) the remediation complete(d)	02/28/2025
What is the estimated surface area (in square feet) that will be reclaimed	4725
What is the estimated volume (in cubic yards) that will be reclaimed	525
What is the estimated surface area (in square feet) that will be remediated	4725
What is the estimated volume (in cubic yards) that will be remediated	525

These estimated dates and measurements are recognized to be the best guess or calculation at the time of submission and may (be) change(d) over time as more remediation efforts are completed.

The OCD recognizes that proposed remediation measures may have to be minimally adjusted in accordance with the physical realities encountered during remediation. If the responsible party has any need to significantly deviate from the remediation plan proposed, then it should consult with the division to determine if another remediation plan submission is required.

QUESTIONS

Remediation Plan (continued)	
<i>Please answer all the questions that apply or are indicated. This information must be provided to the appropriate district office no later than 90 days after the release discovery date.</i>	
This remediation will (or is expected to) utilize the following processes to remediate / reduce contaminants:	
<i>(Select all answers below that apply.)</i>	
(Ex Situ) Excavation and off-site disposal (i.e. dig and haul, hydrovac, etc.)	Yes
Which OCD approved facility will be used for off-site disposal	LEA LAND LANDFILL [FEEM0112342028]
OR which OCD approved well (API) will be used for off-site disposal	Not answered.
OR is the off-site disposal site, to be used, out-of-state	Not answered.
OR is the off-site disposal site, to be used, an NMED facility	Not answered.
(Ex Situ) Excavation and on-site remediation (i.e. On-Site Land Farms)	Not answered.
(In Situ) Soil Vapor Extraction	Not answered.
(In Situ) Chemical processing (i.e. Soil Shredding, Potassium Permanganate, etc.)	Not answered.
(In Situ) Biological processing (i.e. Microbes / Fertilizer, etc.)	Not answered.
(In Situ) Physical processing (i.e. Soil Washing, Gypsum, Disking, etc.)	Not answered.
Ground Water Abatement pursuant to 19.15.30 NMAC	Not answered.
OTHER (Non-listed remedial process)	Not answered.
<i>Per Subsection B of 19.15.29.11 NMAC unless the site characterization report includes completed efforts at remediation, the report must include a proposed remediation plan in accordance with 19.15.29.12 NMAC, which includes the anticipated timelines for beginning and completing the remediation.</i>
