Steps and Actions to Prevent Waste	
For this event, this operator could not have reasonably anticipated the current event and it was beyond this operator's control	True
Please explain reason for why this event was beyond this operator's control	During a scheduled internal inspection, a leak was discovered on a 2-inch pressure release valve on a compressor that resulted in a release to atmosphere.
Steps taken to limit the duration and magnitude of vent or flare	Upon discovery, the compressor unit and associated production was shut down in response to the event to cease venting. Leak Detection and Repair (LDAR) groups were dispatched to help diagnose the issue. Maintenance groups were dispatched, and repairs were made to the unit before being placed back into service.
Corrective actions taken to eliminate the cause and reoccurrence of vent or flare	Corrective measures focused on reducing gas production as quickly and safely as possible to minimize the duration and volume of gas vented. The compressor unit associated with the venting event was shut in and repairs were made before placing the unit back into service.
