Pima Environmental Services, LLC (Pima) has been contracted by Devon Energy Production Company, LP (Devon) to prepare this Site Assessment, Remediation, and Closure Report for a produced water spill at the Ichabod 7 Fed 1H Battery (Ichabod). The New Mexico Oil Conservation Division (NMOCD) assigned the following incident numbers: NAPP2327933516 on June 9, 2024, NRM2003147859 on October 31, 2019, and NRM2001531075 on August 13, 2019.

Site Characterization

The Ichabod is located approximately eighteen (18) miles southwest of Bennett, NM. This spill site is in Unit P, Section 07, Township 26S, Range 34E, Latitude 32.0511932 Longitude -103.5014954, Lea County, NM. Figure 1 references a Location Map.

Per the New Mexico Bureau of Geology and Mineral Resources, the geology is made up Alluvial and eolian deposits, and petrocalcic soils of the southern High Plains. Locally includes Qoa. The soil in this area is made up of Berino-Cacique association, hummocky and Pyote soils and Dune land, according to the United States Department of Agriculture Natural Resources Conservation Service soil survey (Appendix B). The drainage class in this area is well drained. There is a low potential for karst geology to be present around the Ichabod (Figure 3). Reference Figure 2 for a Topographic Map.

Based on the well water data from the New Mexico Office of the State Engineer water well (C-04626 POD 1) ,the depth to the nearest groundwater in this vicinity measures 55 feet below grade surface (BGS), positioned 0.49 of a mile away from the Ichabod. Drilled on June 9,2022. Conversely, as per the United States Geological Survey well water data (USGS320419103302201), the nearest groundwater depth in this region is recorded at 178 feet BGS, situated approximately 1.79 of a miles away from the Ichabod, with the last gauge conducted in 2012. (Appendix A).

Release Information

NAPP2327933516 : On October 5, 2023, a 16" poly PW fuse failed on a 16" main line. Fluids flowed into the containment, then onto the pad and offsite north to the lease road. The released fluids were calculated to be approximately 2,286 barrels (bbls) of produced water. Vacuum trucks were able to recover approximately 1,086 bbls of produced water. Due to the volume of fluids released, the containment overflowed, breaching the containment walls.

NRM2003147859: On October 31, 2019, a seal failed on a 16" poly line causing release into pasture. The released fluids were calculated to be approximately 5.88 barrels (bbls) of Produced water. No fluids were recovered.

NRM2001531075: On August 8, 2019, a release occurred due to a rupture line on a booster pump. The released fluids were calculated to be approximately 1,240 barrels (bbls) of produced water, Vacuum trucks were able to recover 960 bbls of fluid. This spill occurred in containment and outside of containment. Due to the volume of fluids released, the containment overflowed, breaching the containment walls.

The spills overlapped, and all were addressed during the soil remediation process.

Remediation Activities, Site Assessment, and Soil Sampling Results

From October 10, 11, 17, 18, and 20, 2023, Pima mobilized personnel to the site to collect soil samples from the spill area using a hand auger and backhoe. On January 6 and 26, 2024, Pima returned to the site to further delineate the affected spill. The laboratory results of these sampling events are provided in the following data table. A site map is available in Figure 4.

On May 22, 2024, the Devon Construction Department mobilized personnel and equipment to initiate immediate remediation activities. Excavation was conducted to depths of 1 foot and 4 feet below ground surface (BGS). A total of 24,635 cubic yards of contaminated soil was hauled to R360 Antelope Draw, an approved, lined disposal facility, and clean backfill material was brought in.

On July 12, 2024, after Devon had submitted a 48-Hour sampling notification for each incident (Appendix C), confirmation sampling was performed for the excavated areas.
The sampling notification for NAPP2327933516 can be found in OCD Online: Permitting – Action Status, under the application ID: 352303.
The sampling notification for NRM2003147859 can be found in OCD Online: Permitting – Action Status, under the application ID: 352301.
The sampling notification for NRM2001531075 can be found in OCD Online: Permitting – Action Status, under the application ID: 352298.

441 confirmation composite base samples were collected, and 451 confirmation composite wall samples were collected. Each sample collected was representative of no more than a 200 square feet area. After collection, each sample was Immediately put on ice, jarred, and delivered to Cardinal Laboratories Labs for official testing. All samples were analyzed for all constituents listed on Table 1 19.15.29.12 NMAC. The results of this sampling event can be found in the following data tables.

Liner Inspections

NAPP2327933516
On August 6, 2024, Pima personnel mobilized equipment to the site to perform power washing of the liner and containment. A vacuum truck accompanied the crew to recover the power washing fluids.

On August 10, 2024, after submitting the 48-hour notification application ID: 371596 to the OCD, Pima Environmental conducted a liner inspection at this location. Pima concluded that the liner and containment maintained their integrity and successfully retained the fluids. The liner inspection form and photographic documentation can be found in Appendix C.

NRM2001531075
On August 6, 2024, Pima personnel mobilized equipment to the site to perform power washing of the liner and containment. A vacuum truck accompanied the crew to recover the power washing fluids.

On August 10, 2024, after submitting the 48-hour notification application ID: 371594 to the OCD, Pima Environmental conducted a liner inspection at this location. Pima concluded that the liner and containment maintained their integrity and successfully retained the fluids. The liner inspection form and photographic documentation can be found in Appendix C.

Based on the sample results, the bottom and sidewall samples were below the NMOCD Closure Criteria 19.15.29 NMAC. The contaminated material was adequately removed and transported to R360 Antelope Draw, an NMOCD-approved disposal site. Refer to Appendix D for photographic documentation.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:20,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Lea County, New Mexico
Survey Area Data: Version 20, Sep 6, 2023

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Feb 7, 2020—May 12, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

M4	Matrix spike recovery value is suspect since the analyte concentration in the sample is disproportionate to the spike level. The associated LCS spike recovery was acceptable.
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
RPD	Relative Percent Difference
DNI	Did Not Ignite
DNR	Did not react with the addition of acid or base.

Note (1): Methods marked with ** are non-accredited methods.

Note (2): Soil data is reported on an "as received" weight basis, unless reported otherwise.

Plains TX, 79355-0247	Project Manager:	Tom Bynum	10/31/23 13:22

M4	Matrix spike recovery value is suspect since the analyte concentration in the sample is disproportionate to the spike level. The associated LCS spike recovery was acceptable.
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
RPD	Relative Percent Difference
DNI	Did Not Ignite
DNR	Did not react with the addition of acid or base.

Note (1): Methods marked with ** are non-accredited methods.

Note (2): Soil data is reported on an "as received" weight basis, unless reported otherwise.
