2025 Work Plan

1 Introduction

Arcadis U.S., Inc. (Arcadis) has prepared this Work Plan, on behalf of Concho Operating, LLC (COG – now ConocoPhillips), for the release site known as the Tomahawk WC Unit 714 (Site) located at 32.1953, -104.1184. Details of the release are summarized in the New Mexico Oil Conservation Division (NMOCD) Initial C-141 Form included as **Appendix A**.

2 Project Summary

The Site is located on federal land approximately 4.6-miles southwest of the City of Malaga in Unit A, Section 30, Township 24 South, Range 28 East, Eddy County, New Mexico. The site is located within a medium karst area. A Site Location Map is included as **Figure 1** and a Topographic Map as **Figure 2**.

2.1 Incident # NAPP2430659655

According to the Initial C-141 Form, on October 30, 2024, a damaged segment of layflat line due to corrosion resulted in the release of approximately 291.0659 barrels (bbls) of produced water to ground surface at the Site with 20 bbls recovered. The Initial C-141 Form was submitted to the NMOCD on February 3, 2025, and assigned Incident ID number NAPP2430659655. The Initial C-141 Form is included as **Appendix A**.

3 Site Characterization

After a review of the New Mexico Office of State Engineers (NMOSE) and USGS databases, there's a known water well approximately 0.5-mile from the Site with a reported depth of 80' below ground surface (bgs) to a dry bottom casing. The site characterization and water well data can be found in **Appendix B**.

What is the minimum distance, between the closest lateral extents of the release and the following surface areas:

- A continuously flowing watercourse or any other significant watercourse: > Between 1 and 5 mi.
- Any lakebed, sinkhole, or playa lake (measured from the ordinary high-water mark): Between 1 and 5 mi.
- An occupied permanent residence, school, hospital, institution, or church: Between 1 and 5 mi.
- A spring or a private domestic fresh water well used by less than five households for domestic or stock watering purposes: Between 1 and 5 mi.
- Any other fresh water well or spring: Between 1 and 5 mi.
- Incorporated municipal boundaries or a defined municipal fresh water well field: > 5 miles
- A wetland: Between 1/2 and 1 mile
- A subsurface mine: > 5 miles
- A (non-karst) unstable area: > 5 miles
- Categorize the risk of this well/site being in Karst Geology: Medium
- A 100-year floodplain: Between 1 and 5 mi.
- Did the release impact areas not on an exploration, development, production, or storage site? Yes

2025 Work Plan

4 NMAC Regulatory Criteria

Per Table I of NMAC part 19.15.29.12, the following closure criteria apply to the Site for reclamation and remediation activities due to being in a medium karst area:

Constituent	Limit (mg/kg)
Benzene	10 mg/kg
Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX)	50 mg/kg
Total Petroleum Hydrocarbons (TPH) – Gasoline Range Organics (GRO), Diesel Range Organics (DRO), and Oil Range Organics (ORO)	100 mg/kg
Chloride	600 mg/kg

5 Site Assessment Activities

On March 7, 2025, Arcadis performed site assessment activities to evaluate soil impacts stemming from the release. A total of forty (40) sample points were advanced to depths ranging from the surface to 3 feet bgs inside and surrounding the release area to evaluate the vertical and horizontal extents of the release. Soil sample locations are shown on **Figure 3**.

Horizontal and vertical delineation was achieved during the initial soil assessment confirming impact from the release is delineated below the NMOCD standards for both reclamation and remediation. Arcadis will use this data to guide reclamation and remediation activities prior to collecting any laboratory analytical samples. Soil sample analytical results are summarized in **Table 1**. Laboratory reports for soil samples collected during the initial site assessment, including analytical methods, results, and chain-of-custody documents, are attached in **Appendix C**.

6 Proposed Work Plan

Based on the analytical data and the detected chloride concentrations in soil samples collected during site assessment activities, COG proposes to remediate the areas shown in **Figure 3**, based on analytical data depicted in **Table 1**.

The proposed excavation is approximately 1,500 feet long and an average of 90 feet wide and encompasses a surface area of approximately 135,256 square feet. The majority of the release's impact was confirmed to have been confined to within the first 1-2 feet bgs within the release area that is primarily located between a service road and a subsurface pipeline corridor. Some pooling occurred within the eastern and western pasture areas and chloride impact was confirmed to depths of less than 4 feet bgs.

During the assessment phase, all BTEX and TPH concentrations were reported below the NMOCD reclamation limits shown in Section 4. TPH was detected below the restoration screening criteria at two sampling locations at concentrations of 30.8 mg/kg and 68.6 mg/kg. No BTEX constituents were reported above laboratory detection limits. Chloride concentrations ranged from 3.90 mg/kg to 10,400 mg/kg within the release area. In accordance

2025 Work Plan

with NMAC 19.15.29.12(D)(1)(b) COG proposes the following alternative confirmation sampling plan as a variance request to adhere with NMOCD requirements. Five-point composite confirmation soil samples will be collected from the excavation floor and sidewalls at 500 square foot intervals for analysis of chloride by EPA Method 300.0, BTEX by EPA Method 8260, and TPH for GRO, DRO, and ORO by EPA Method 8015. Lateral limits of the excavation will halt once confirmation sample analytical results are in accordance with NMAC 19.15.29.12(D)(1)(c)

An estimated 12,673 cubic yards of soil will be removed and transported to the nearest NMOCD approved disposal facility. Following completion of excavation activities, the areas will be backfilled with clean material and reclaimed to match the original surface conditions and drainage.

A cultural resource inventory (CRI) was conducted on February 27, 2025, to determine if there are any archeological findings as defined by the Bureau of Land Management. After the assessment, nothing was found to conflict with the release area. The findings from the CRI were submitted to the BLM Archaeological department following completion of the survey on March 10, 2025. The completed survey cover sheet is included in **Appendix D**.

The disturbed areas will be reseeded during the first favorable growing season following closure of the site in accordance with NMAC part 19.15.29.13 with an BLM #2 approved seed mixture.

The proposed remediation activities will be implemented within 90 days following approval of this work plan by the NMOCD. The anticipated schedule includes 30 days to schedule field work and confirm sub-contractors, 30 days to complete on-site remediation activities, and 30 days to prepare a soil remediation summary and closure request report.

7 Work Plan Approval Request

Upon completion of the above proposed soil remediation activities, a final closure request report describing the remediation activities will be submitted to the NMOCD for review. If you have any questions regarding this work plan or need additional information, please do not hesitate to contact Scott Foord at 281-725-7447 or Justin Nixon at 432-296-9547.

Cause of Release

The release was caused by a damaged segment of a layflat line due to corrosion.
The release was off the pad. A vacuum truck was dispatched to remove all freestanding fluids.
Evaluation will be made of the site to determine if we may commence remediation immediately or delineate any possible impact from the release and we will present a remediation work plan to the NMOCD for approval prior to any significant remediation activities.

Was this a major release as defined by 19.15.29.7(A) NMAC? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	If YES, for what reason(s) does the responsible party consider this a major release? Release was greater than 25 barrels.
If YES, was immediate notice given to the OCD? By whom? To whom? When and by what means (phone, email, etc)? Immediate notification was made by Justin Carlile on Friday, November 11, 2024 via online portal.	

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury

- The source of the release has been stopped.
- The impacted area has been secured to protect human health and the environment.
- Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices.
- All free liquids and recoverable materials have been removed and managed appropriately.

If all the actions described above have not been undertaken, explain why:

Per 19.15.29.8 B. (4) NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please attach a narrative of actions to date. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see 19.15.29.11(A)(5)(a) NMAC), please attach all information needed for closure evaluation.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 3/7/2025 5:07 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 20.2°C.

Method 8015MOD_NM: The matrix spike (MS) recoveries for preparation batch 880-105195 and analytical batch 880-105218 were outside control limits. Non-homogeneity is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 8015MOD_NM: Surrogate recovery for the following samples were outside control limits: (LCS 880-105195/2-A) and (LCSD 880-105195/3-A). Evidence of matrix interferences is not obvious.

Good afternoon Shelly,

Yes ma'am, that's correct. The 3/7/25 H-18 location was 10' south within the excavated area so we stepped out to the north.

Please let me know if you have any other questions or would like to discuss further. I should be in the office all week.

Thanks,
Justin

Hi Justin,

I am beginning to review the remediation plan submitted for **NAPP2430659655 TOMAHAWK WC UNIT 714** and have a question for you. H-18 has two different samples collected on two different dates. Is the sample that was collected on 3/7/25 included within the excavation extent? It is unclear as there is only one location for H-18 on Figure 3. Can you please explain?

I look forward to hearing what you have to say,

Shelly

QUESTIONS

Nature and Volume of Release (continued)	
Is this a gas only submission (i.e. only significant Mcf values reported)	No, according to supplied volumes this does not appear to be a "gas only" report.
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	Yes
Reasons why this would be considered a submission for a notification of a major release	From paragraph A. "Major release" determine using: (1) an unauthorized release of a volume, excluding gases, of 25 barrels or more.

With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.

Initial Response	
<i>The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.</i>	
The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	<i>Not answered.</i>

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
