Quality Assurance: The above analyses are performed in accordance with ASTM, UOP, GPA guidelines for quality assurance, unless otherwise stated. The test results apply to the sample as received.

**UPSET VENTING EVENT SPECIFIC JUSTIFICATIONS FORM****Facility Id#** fAPP2127048458**Facility:** Sand Dunes South Corridor CTB**Duration of Event:** 17 Hours**Start Time:** 07:00 AM**Cause:** Equipment Malfunction > VCU > Flash Process Fire**Method of Vented Gas Measurement:** Allocated Calculation**Operator:** OXY USA, Inc.**Vent Date:** 07/04/2025**MCF Vented:** 133**End Time:** 11:59 PM**1. Reason why this event was beyond Operator's control:**

This emissions event was caused by the unforeseen, unexpected, sudden, and unavoidable breakdown of equipment or process that was beyond the owner/operator's control and did not stem from activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and preventative maintenance practices. Oxy engages in respectable and good facility operation practices while also maintaining its continuous facility equipment preventative maintenance program. In this situation, venting occurred due to a brief flash process fire in VCU unit #1. During scheduled preventative maintenance, fluids were cleared from the suction piping, and applicable pressure was observed at the tank pit. The suction valve was fully opened, allowing fluid behind the valve to migrate to the burner pilot, which resulted in a flash process fire. The fire was extinguished when the inlet was closed. Following the incident, the VCU remained offline due to burnt wires and pending repairs. With VCU unit #1 shut down, pressure increased in the water tanks, leading to venting through the Enardo hatches. While venting is not OXY's primary approach for addressing or rectifying sudden and unexpected malfunctions, it was essential to maintain operational and equipment safety until the issue could be resolved expeditiously. This event is out of OXY's control yet OXY made every effort to control and minimize emissions as much as possible by working safely and diligently.

**2. Steps Taken to limit duration and magnitude of venting or flaring:**

While venting is not OXY's primary approach for addressing or rectifying malfunctions, it was essential to maintain operational and equipment safety until the issue could be resolved expeditiously. In this situation, venting occurred due to a brief flash process fire in VCU unit #1. During scheduled preventative maintenance, fluids were cleared from the suction piping, and applicable pressure was observed at the tank pit. The suction valve was fully opened, allowing fluid behind the valve to migrate to the burner pilot, which resulted in a flash process fire. The fire was extinguished when the inlet was closed. Following the incident, the VCU remained offline due to burnt wires and pending repairs. With VCU unit #1 shut down, pressure increased in the water tanks, leading to venting through the Enardo hatches. While venting is not OXY's primary approach for addressing or rectifying malfunctions, it was essential to maintain operational and equipment safety until the issue could be resolved expeditiously. This event is out of OXY's control yet OXY made every effort to control and minimize emissions as much as possible.

**3. Corrective Actions taken to eliminate the cause and reoccurrence of venting or flaring:**

Oxy is limited in the corrective actions available to them to eliminate the cause and potential reoccurrence of VCU malfunctions as notwithstanding VCU engine design and operation, VCU's are inherently dynamic and even the smallest alarms, false or true, can be sudden, reasonably unforeseeable and unexpected which can cause malfunctions to occur. Oxy continually strives to maintain and operate all its equipment in a manner consistent with good practices for minimizing emissions and reducing the number of emission events. Oxy has a strong and positive equipment preventative maintenance program in place.

| Only valid Vent, Flare or Vent with Flaring incidents (selected above in the Application Details section) that are assigned to your current operator can be amended with this C-129A application. |  |

|   |   |
|---|---|
| <b>Determination of Reporting Requirements</b>  |   |
| Answer all questions that apply. The Reason(s) statements are calculated based on your answers and may provide additional guidance.   |   |
| Was this vent or flare caused by an emergency or malfunction  | Yes   |
| Did this vent or flare last eight hours or more cumulatively within any 24-hour period from a single event  | Yes   |
| Is this considered a submission for a vent or flare event   | Yes, minor venting and/or flaring of natural gas. |
| An operator shall file a form C-141 instead of a form C-129 for a release that, includes liquid during venting and/or flaring that is or may be a major or minor release under 19.15.29.7 NMAC.   |   |
| Was there at least 50 MCF of natural gas vented and/or flared during this event   | Yes   |
| Did this vent or flare result in the release of ANY liquids (not fully and/or completely flared) that reached (or has a chance of reaching) the ground, a surface, a watercourse, or otherwise, with reasonable probability, endanger public health, the environment or fresh water | No  |
| Was the vent or flare within an incorporated municipal boundary or within 300 feet from an occupied permanent residence, school, hospital, institution or church in existence   | No  |

|   |  |
|---|--|
| <b>Equipment Involved</b>                                 |  |
| Primary Equipment Involved                                | Other (Specify)                                  |
| Additional details for Equipment Involved. Please specify | Equipment Malfunction > VCU > Flash Process Fire |

|   |    |
|---|----|
| <b>Representative Compositional Analysis of Vented or Flared Natural Gas</b>  |    |
| Please provide the mole percent for the percentage questions in this group.   |    |
| Methane (CH4) percentage  | 75 |
| Nitrogen (N2) percentage, if greater than one percent   | 1  |
| Hydrogen Sulfide (H2S) PPM, rounded up  | 0  |
| Carbon Dioxide (CO2) percentage, if greater than one percent  | 1  |
| Oxygen (O2) percentage, if greater than one percent   | 0  |
| If you are venting and/or flaring because of Pipeline Specification, please provide the required specifications for each gas. |    |
| Methane (CH4) percentage quality requirement  | 0  |
| Nitrogen (N2) percentage quality requirement  | 0  |
| Hydrogen Sulfide (H2S) PPM quality requirement  | 0  |
| Carbon Dioxide (CO2) percentage quality requirement   | 0  |
| Oxygen (O2) percentage quality requirement  | 0  |

|-------------------------------------|---|
| <input checked="" type="checkbox"/> | I acknowledge that with this application I will be amending an existing incident file (assigned to this operator) for a vent or flare event, pursuant to 19.15.27 and 19.15.28 NMAC.  |
| <input checked="" type="checkbox"/> | I acknowledge that amending an incident file does not replace original submitted application(s) or information and understand that any C-129 forms submitted to the OCD will be logged and stored as public record.   |
| <input checked="" type="checkbox"/> | I hereby certify the statements in this amending report are true and correct to the best of my knowledge and acknowledge that any false statement may be subject to civil and criminal penalties under the Oil and Gas Act.   |
| <input checked="" type="checkbox"/> | I acknowledge that the acceptance of any C-129 forms by the OCD does not relieve this operator of liability should their operations have failed to adequately investigate, report, and remediate contamination that poses a threat to groundwater, surface water, human health, or the environment. |
| <input checked="" type="checkbox"/> | I acknowledge that OCD acceptance of any C-129 forms does not relieve this operator of responsibility for compliance with any other applicable federal, state, or local laws and/or regulations.  |
