**UPSET FLARING EVENT SPECIFIC JUSTIFICATIONS FORM****Facility Id#** fAPP2126563666**Operator:** OXY USA, Inc.**Facility:** Salt Flat CTB**Flare Date:** 10/29/2025**Duration of Event:** 2 Hours 40 Minutes**MCF Flared:** 1040**Start Time:** 08:10 AM**End Time:** 10:50 AM**Cause:** Emergency Flare > Third Party > USA Compression > Salt Flat Boo Compressor Station > Multiple Compression Equipment Issues**Method of Flared Gas Measurement:** Gas Flare Meter**1. Reason why this event was beyond Operator's control:**

This emissions event was caused by the unforeseen, unexpected, sudden, and unavoidable breakdown of equipment or process that was beyond the owner/operator's control and did not stem from activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and preventative maintenance practices. OXY engages in respectable and good facility operation practices while also maintaining its continuous facility equipment preventative maintenance program. In this instance, USA Compression encountered multiple compressor equipment malfunctions at its Salt Flat Boo compressor station, which led to an unexpected restriction in gas flow intake from OXY's Salt Flat CTB facility. Consequently, this third party caused operational limitation resulted in a flaring event at the Salt Flat CTB due to the accumulation of backed-up gas. To mitigate the risks associated with overpressure from unexpected backed up gas and to ensure the safety of our operations, OXY had to resort to controlled flaring. This process allows OXY to safely burn off the excess gas, thereby preventing potential hazards such as equipment damage, leaks, or even explosions. While flaring is not OXY's preferred method of handling backed up gas, it is a necessary step under these exceptional circumstances to maintain the integrity and safety of our operations. OXY's Salt Flat CTB was operating normally prior to the flaring incident occurring. This event is out of OXY's control yet OXY made every effort to control and minimize emissions as much as possible by working safely and diligently.

**2. Steps Taken to limit duration and magnitude of venting or flaring:**

It is OXY's policy to route its stranded gas to a flare during an unforeseen and unavoidable emergency or malfunction, that is beyond OXY's control to avoid, prevent or foresee, to minimize emissions as much as possible as part of the overall steps taken to limit duration and magnitude of flaring. The flare at this facility has 98% combustion efficiency to lessen emissions as much as possible. In this instance, USA Compression encountered multiple compressor equipment malfunctions at its Salt Flat Boo compressor station, which led to an unexpected restriction in gas flow intake from OXY's Salt Flat CTB facility. Consequently, this third party caused operational limitation resulted in a flaring event at the Salt Flat CTB due to the accumulation of backed-up gas. OXY's field and operations teams diligently oversee the facility and field pressure to swiftly identify any deviations from accepted standard operational parameters and as soon as flaring occurred, the wells auto-choke system began adjusting injection rates. Field personnel in the area were directed to assist with manually shutting in additional wells to cease flaring, which took time to do. While flaring is not OXY's preferred method of handling backed up gas, it is a necessary step under these exceptional circumstances to maintain the integrity and safety of our operations. OXY's Salt Flat CTB was operating normally prior to the flaring incident occurring. This event is out of OXY's control yet OXY made every effort to control and minimize emissions as much as possible by working safely and diligently.

**3. Corrective Actions taken to eliminate the cause and reoccurrence of venting or flaring:**

OXY is limited in its ability to take any form of corrective actions to eliminate the cause and potential reoccurrence of a third-party owned and operated compressor station's sudden and unexpected gas flow intake restriction or shut-in, as this control issue is downstream of OXY's custody transfer point and out of OXY's control to foresee, avoid, prevent from happening or recurring. Third-party downstream compression station owner operators may have equipment issues, which will recur from time to time, which in turn, directly impacts OXY's ability to send its sales gas to them, and potentially trigger a flaring event. OXY makes every effort to control and minimize emissions as much as possible. The only action that OXY can take and handle that is within its control is to continually communicate with USA Compression personnel, who operate the Salt Flat Boo Compressor Station, when possible, during these types of circumstances.

**QUESTIONS**

| Date(s) and Time(s)                            |            |
|------------------------------------------------|------------|
| Date vent or flare was discovered or commenced | 10/29/2025 |
| Time vent or flare was discovered or commenced | 08:10 AM   |
| Time vent or flare was terminated              | 10:50 AM   |
| Cumulative hours during this event             | 3          |

| Measured or Estimated Volume of Vented or Flared Natural Gas              |                                                                                                                 |
|---------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|
| Natural Gas Vented (Mcf) Details                                          | Not answered.                                                                                                   |
| Natural Gas Flared (Mcf) Details                                          | Cause: Other   Other (Specify)   Natural Gas Flared   Released: 1,040 Mcf   Recovered: 0 Mcf   Lost: 1,040 Mcf. |
| Other Released Details                                                    | Not answered.                                                                                                   |
| Additional details for Measured or Estimated Volume(s). Please specify    | Gas Flare Meter                                                                                                 |
| Is this a gas only submission (i.e. only significant Mcf values reported) | Yes, according to supplied volumes this appears to be a "gas only" report.                                      |

| Venting or Flaring Resulting from Downstream Activity             |               |
|-------------------------------------------------------------------|---------------|
| Was this vent or flare a result of downstream activity            | No            |
| Was notification of downstream activity received by this operator | Not answered. |
| Downstream OGRID that should have notified this operator          | Not answered. |
| Date notified of downstream activity requiring this vent or flare |               |
| Time notified of downstream activity requiring this vent or flare | Not answered. |

| Steps and Actions to Prevent Waste                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| For this event, this operator could not have reasonably anticipated the current event and it was beyond this operator's control | True                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Please explain reason for why this event was beyond this operator's control                                                     | <p>This emissions event was caused by the unforeseen, unexpected, sudden, and unavoidable breakdown of equipment or process that was beyond the owner/operator's control and did not stem from activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and preventative maintenance practices. OXY engages in respectable and good facility operation practices while also maintaining its continuous facility equipment preventative maintenance program. In this instance, USA Compression encountered multiple compressor equipment malfunctions at its Salt Flat Boo compressor station, which led to an unexpected restriction in gas flow intake from OXY's Salt Flat CTB facility. Consequently, this third party caused operational limitation resulted in a flaring event at the Salt Flat CTB due to the accumulation of backed-up gas. To mitigate the risks associated with overpressure from unexpected backed up gas and to ensure the safety of our operations, OXY had to resort to controlled flaring. This process allows OXY to safely burn off the excess gas, thereby preventing potential hazards such as equipment damage, leaks, or even explosions. While flaring is not OXY's preferred method of handling backed up gas, it is a necessary step under these exceptional circumstances to maintain the integrity and safety of our operations. OXY's Salt Flat CTB was operating normally prior to the flaring incident occurring. This event is out of OXY's control yet OXY made every effort to control and minimize emissions as much as possible by working safely and diligently.</p> <p>It is OXY's policy to route its stranded gas to a flare during an unforeseen and unavoidable emergency or malfunction, that is beyond OXY's control to avoid, prevent or foresee, to</p> |

|                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Steps taken to limit the duration and magnitude of vent or flare                  | minimize emissions as much as possible as part of the overall steps taken to limit duration and magnitude of flaring. The flare at this facility has 98% combustion efficiency to lessen emissions as much as possible. In this instance, USA Compression encountered multiple compressor equipment malfunctions at its Salt Flat Boo compressor station, which led to an unexpected restriction in gas flow intake from OXY's Salt Flat CTB facility. Consequently, this third party caused operational limitation resulted in a flaring event at the Salt Flat CTB due to the accumulation of backed-up gas. OXY's field and operations teams diligently oversee the facility and field pressure to swiftly identify any deviations from accepted standard operational parameters and as soon as flaring occurred, the wells auto-choke system began adjusting injection rates. Field personnel in the area were directed to assist with manually shutting in additional wells to cease flaring, which took time to do. While flaring is not OXY's preferred method of handling backed up gas, it is a necessary step under these exceptional circumstances to maintain the integrity and safety of our operations. OXY's Salt Flat CTB was operating normally prior to the flaring incident occurring. This event is out of OXY's control yet OXY made every effort to control and minimize emissions as much as possible by working safely and diligently. |
| Corrective actions taken to eliminate the cause and reoccurrence of vent or flare | OXY is limited in its ability to take any form of corrective actions to eliminate the cause and potential reoccurrence of a third-party owned and operated compressor station's sudden and unexpected gas flow intake restriction or shut-in, as this control issue is downstream of OXY's custody transfer point and out of OXY's control to foresee, avoid, prevent from happening or recurring. Third-party downstream compression station owner operators may have equipment issues, which will recur from time to time, which in turn, directly impacts OXY's ability to send its sales gas to them, and potentially trigger a flaring event. OXY makes every effort to control and minimize emissions as much as possible. The only action that OXY can take and handle that is within its control is to continually communicate with USA Compression personnel, who operate the Salt Flat Boo Compressor Station, when possible, during these types of circumstances.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|-------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <input checked="" type="checkbox"/> | I acknowledge that with this application I will be amending an existing incident file (assigned to this operator) for a vent or flare event, pursuant to 19.15.27 and 19.15.28 NMAC.                                                                                                                |
| <input checked="" type="checkbox"/> | I acknowledge that amending an incident file does not replace original submitted application(s) or information and understand that any C-129 forms submitted to the OCD will be logged and stored as public record.                                                                                 |
| <input checked="" type="checkbox"/> | I hereby certify the statements in this amending report are true and correct to the best of my knowledge and acknowledge that any false statement may be subject to civil and criminal penalties under the Oil and Gas Act.                                                                         |
| <input checked="" type="checkbox"/> | I acknowledge that the acceptance of any C-129 forms by the OCD does not relieve this operator of liability should their operations have failed to adequately investigate, report, and remediate contamination that poses a threat to groundwater, surface water, human health, or the environment. |
| <input checked="" type="checkbox"/> | I acknowledge that OCD acceptance of any C-129 forms does not relieve this operator of responsibility for compliance with any other applicable federal, state, or local laws and/or regulations.                                                                                                    |
