Date of Release: 8/8/2025

The volume of fluid released on location was determined by the volume of the fluid that was in the work tank for the P&A rig. 52 bbls fresh water/3 bbls oil was released.

The pit tank for the workover rig was monitored and known when the tank failure occurred.

All fluids were immediately sucked up with a vac truck that was on standby near location.

Pit Tank for Workover Rig

Total Volume capacity of Rig = 100 bbls

Total Volume prior to Release = 55 bbls

Total Volume after the Release = 0 bbls

NOR completed on 8/11/2025 showed produced water. This was a misunderstanding on my part. If you have any questions, you can contact me at 575-622-1127 ext. 13 or by email at rfresquez@stratanm.com.

Detailed description of proposed Remediation technique:

Sample soil to delineate the contaminated soil. Remove soil with excavator and haul to Lea Land disposal. Resample area to ensure contamination has been removed or continue process until all contaminated soil is removed from the site. Over excavate delineation points to ensure all contaminants are removed and clean samples are achieved. Take composite samples across excavated area to ensure that all contamination is removed to better than most strict remediation requirements. Replace removed soil with remediated clean soil from Lea Land Disposal.

Remediation Activities

Map and delineate spill area. Took initial composite samples for testing. Testing showed only high chlorides in caliche. Brought equipment in and removed caliche to ` 3'. Hauled all contaminated material to Lea Land Disposal Facility. Retook composite samples across the dig area and sidewalls. All samples tested clean. Took composite closure samples on 10/30 and took them to the lab. All samples tested clean and free of contamination.

QUESTIONS

Nature and Volume of Release (continued)

Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	Unavailable.
Reasons why this would be considered a submission for a notification of a major release	Unavailable.

With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.

Initial Response	
<i>The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.</i>	
The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	Not answered.

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Was this release entirely contained within a lined containment area	No
Soil Contamination Sampling: (Provide the highest observable value for each, in milligrams per kilograms.)	
Chloride (EPA 300.0 or SM4500 Cl B)	9600
TPH (GRO+DRO+MRO) (EPA SW-846 Method 8015M)	0
GRO+DRO (EPA SW-846 Method 8015M)	106
BTEX (EPA SW-846 Method 8021B or 8260B)	0
Benzene (EPA SW-846 Method 8021B or 8260B)	0

Per Subsection B of 19.15.29.11 NMAC unless the site characterization report includes completed efforts at remediation, the report must include a proposed remediation plan in accordance with 19.15.29.12 NMAC, which includes the anticipated timelines for beginning and completing the remediation.

On what estimated date will the remediation commence	09/22/2025
On what date will (or did) the final sampling or liner inspection occur	10/30/2025
On what date will (or was) the remediation complete(d)	10/31/2025
What is the estimated surface area (in square feet) that will be reclaimed	500
What is the estimated volume (in cubic yards) that will be reclaimed	50
What is the estimated surface area (in square feet) that will be remediated	500
What is the estimated volume (in cubic yards) that will be remediated	50

These estimated dates and measurements are recognized to be the best guess or calculation at the time of submission and may (be) change(d) over time as more remediation efforts are completed.

The OCD recognizes that proposed remediation measures may have to be minimally adjusted in accordance with the physical realities encountered during remediation. If the responsible party has any need to significantly deviate from the remediation plan proposed, then it should consult with the division to determine if another remediation plan submission is required.

rhamlet	The Remediation Plan is Conditionally Approved. A "scaled sitemap" will need to be included in the remediation closure report. The release area will need to have 5-point composite confirmation soil samples conducted within the entire boundary of that area. Please collect confirmation closure samples, representing no more than 200 ft ² . All samples must be analyzed for all constituents listed in Table I of 19.15.29.12 NMAC. Floor confirmation samples should be delineated/excavated to meet closure criteria standards from Table 1 of the OCD Spill Rule for site receptor characterization/proven depth to water determination. Please make sure that the edge of the release extent is accurately defined. Sidewall/edge samples should be delineated/excavated to 600 mg/kg for chlorides and 100 mg/kg for TPH to define the edge of the release. The work will need to be completed in 90 days after the report has been reviewed.	12/16/2025
