**UPSET FLARING EVENT SPECIFIC JUSTIFICATIONS FORM****Facility Id#** fAPP2126659618**Facility:** Mesa Verde 18 CTB**Duration of Event:** 10 Hours 10 Minutes**Start Time:** 12:00 AM**Cause:** Emergency Flare > Third Party Downstream Activity > Enlink > Continuing Compression Equipment Issues**Method of Flared Gas Measurement:** Gas Flare Meter**Operator:** OXY USA, Inc.**Flare Date:** 01/29/2026**MCF Flared:** 1314**End Time:** 10:00 AM**1. Reason why this event was beyond Operator's control:**

This emissions event was caused by the sudden, unavoidable breakdown of equipment or process that was beyond OXY's control and did not stem from activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and maintenance practices. This unexpected equipment or process failure was caused by a third-party operator, downstream of OXY's custody transfer point, and was beyond OXY's ability to predict, prevent, or control. This emissions event issue did not arise from any upstream activity at OXY's facility that could have been anticipated or avoided, nor could it have been prevented through proper design, operation, or routine maintenance. In this instance, Enlink's emergency shutdown valve (ESD) repeatedly kept closing as they were having continual compression equipment issues. These abrupt and recurring valve closures caused multiple sudden spikes in sales line pressure, exceeding the high-pressure sales line threshold and triggering intermittent flaring events at Mesa Verde 18 CTB. OXY control room staff quickly contacted Enlink's gas control team to investigate the ESD valve issue and learned that it was due to continual compression equipment problems on Enlink's side and were still awaiting for compression mechanics to arrive. During this period, OXY field personnel-initiated activation of storage wells and shut in high GOR wells as necessary to lower sale line pressure below the flare's trigger set points to cease flaring in each instance of intermittent flaring. Although flaring is not OXY's preferred method for handling excess gas, it is necessary to ensure the safety of our operations, equipment, and field personnel. The occurrence of this event was beyond OXY's control. OXY took all possible measures to manage and reduce emissions to the greatest extent.

2. Steps Taken to limit duration and magnitude of venting or flaring:

It is OXY's policy to route its stranded gas to a flare during an unforeseen and unavoidable emergency or malfunction, that is beyond OXY's control to avoid, prevent or foresee, to minimize emissions as much as possible as part of the overall steps taken to limit duration and magnitude of flaring. The flare at this facility has 98% combustion efficiency to lessen emissions as much as possible. OXY internal procedures mandate that production technicians promptly assess and respond to unexpected flaring events and ensure the underlying cause is identified. In this instance, Enlink's emergency shutdown valve (ESD) repeatedly kept closing as they were having continual compression equipment issues. These abrupt and recurring valve closures caused multiple sudden spikes in sales line pressure, exceeding the high-pressure sales line threshold and triggering intermittent flaring events at Mesa Verde 18 CTB. OXY control room staff quickly contacted Enlink's gas control team to investigate the ESD valve issue and learned that it was due to continual compression equipment problems on Enlink's side and were still waiting for compression mechanics to arrive. During this period, OXY field personnel-initiated activation of storage wells and shut in high GOR wells as necessary to lower sale line pressure below the flare's trigger set points to cease flaring in each instance of intermittent flaring. Although flaring is not OXY's preferred method for handling excess gas, it is necessary to ensure the safety of our operations, equipment, and field personnel. The occurrence of this event was beyond OXY's control. OXY took all possible measures to manage and reduce emissions to the greatest extent.

3. Corrective Actions taken to eliminate the cause and reoccurrence of venting or flaring:

OXY is unable to initiate or implement corrective actions to prevent or eliminate the causes and potential recurrence of equipment failures or operational issues that are solely attributable to Enlink, a third-party downstream operator. Such equipment breakdowns or process issues occur beyond OXY's custody transfer point and fall outside OXY's scope of control, making them impossible for OXY to anticipate, prevent, or avoid. OXY is dedicated to effectively managing and reducing emissions to the greatest extent possible. The only action that OXY can take in these circumstances is to maintain ongoing communication with Enlink gas control room personnel to ensure coordinated and efficient responses to resolve issues in a timely manner. OXY is dedicated to minimizing emissions wherever feasible and strives to maintain effective communication with both downstream and midstream operators, when practical, to address such issues promptly and efficiently.

DEFINITIONS

Action 553962

DEFINITIONS

Operator: OXY USA INC P.O. Box 4294 Houston, TX 772104294	OGRID: 16696
	Action Number: 553962
	Action Type: [C-129] Amend Venting and/or Flaring (C-129A)

DEFINITIONS

For the sake of brevity and completeness, please allow for the following in all groups of questions and for the rest of this application:

- this application's operator, hereinafter "this operator";
- venting and/or flaring, hereinafter "vent or flare";
- any notification or report(s) of the C-129 form family, hereinafter "any C-129 forms";
- the statements in (and/or attached to) this, hereinafter "the statements in this";
- and the past tense will be used in lieu of mixed past/present tense questions and statements.

QUESTIONS

Action 553962

QUESTIONS

Operator: OXY USA INC P.O. Box 4294 Houston, TX 772104294	OGRID: 16696
	Action Number: 553962
	Action Type: [C-129] Amend Venting and/or Flaring (C-129A)

QUESTIONS

Prerequisites	
<i>Any messages presented in this section, will prevent submission of this application. Please resolve these issues before continuing with the rest of the questions.</i>	
Incident ID (n#)	Unavailable.
Incident Name	Unavailable.
Incident Type	Flare
Incident Status	Unavailable.
Incident Facility	[fAPP2126659618] MESA VERDE 18 CTB
<i>Only valid Vent, Flare or Vent with Flaring incidents (selected above in the Application Details section) that are assigned to your current operator can be amended with this C-129A application.</i>	

Determination of Reporting Requirements	
<i>Answer all questions that apply. The Reason(s) statements are calculated based on your answers and may provide additional guidance.</i>	
Was this vent or flare caused by an emergency or malfunction	Yes
Did this vent or flare last eight hours or more cumulatively within any 24-hour period from a single event	Yes
Is this considered a submission for a vent or flare event	Yes, major venting and/or flaring of natural gas.
<i>An operator shall file a form C-141 instead of a form C-129 for a release that, includes liquid during venting and/or flaring that is or may be a major or minor release under 19.15.29.7 NMAC.</i>	
Was there at least 50 MCF of natural gas vented and/or flared during this event	Yes
Did this vent or flare result in the release of ANY liquids (not fully and/or completely flared) that reached (or has a chance of reaching) the ground, a surface, a watercourse, or otherwise, with reasonable probability, endanger public health, the environment or fresh water	No
Was the vent or flare within an incorporated municipal boundary or within 300 feet from an occupied permanent residence, school, hospital, institution or church in existence	No

Equipment Involved	
Primary Equipment Involved	Other (Specify)
Additional details for Equipment Involved. Please specify	Emergency Flare > Third Party Downstream Activity > Enlink > Continuing Compression Equipment Issues

Representative Compositional Analysis of Vented or Flared Natural Gas	
<i>Please provide the mole percent for the percentage questions in this group.</i>	
Methane (CH4) percentage	73
Nitrogen (N2) percentage, if greater than one percent	2
Hydrogen Sulfide (H2S) PPM, rounded up	0
Carbon Dioxide (CO2) percentage, if greater than one percent	3
Oxygen (O2) percentage, if greater than one percent	0
<i>If you are venting and/or flaring because of Pipeline Specification, please provide the required specifications for each gas.</i>	
Methane (CH4) percentage quality requirement	Not answered.
Nitrogen (N2) percentage quality requirement	Not answered.
Hydrogen Sulfide (H2S) PPM quality requirement	Not answered.
Carbon Dioxide (CO2) percentage quality requirement	Not answered.
Oxygen (O2) percentage quality requirement	Not answered.

QUESTIONS, Page 2

Action 553962

QUESTIONS (continued)

Operator: OXY USA INC P.O. Box 4294 Houston, TX 772104294	OGRID: 16696
	Action Number: 553962
	Action Type: [C-129] Amend Venting and/or Flaring (C-129A)

QUESTIONS

Date(s) and Time(s)	
Date vent or flare was discovered or commenced	01/29/2026
Time vent or flare was discovered or commenced	12:00 AM
Time vent or flare was terminated	10:00 AM
Cumulative hours during this event	10

Measured or Estimated Volume of Vented or Flared Natural Gas	
Natural Gas Vented (Mcf) Details	<i>Not answered.</i>
Natural Gas Flared (Mcf) Details	Cause: Other Other (Specify) Natural Gas Flared Released: 1,314 Mcf Recovered: 0 Mcf Lost: 1,314 Mcf.
Other Released Details	<i>Not answered.</i>
Additional details for Measured or Estimated Volume(s). Please specify	Gas Flare Meter
Is this a gas only submission (i.e. only significant Mcf values reported)	Yes, according to supplied volumes this appears to be a "gas only" report.

Venting or Flaring Resulting from Downstream Activity	
Was this vent or flare a result of downstream activity	Yes
Was notification of downstream activity received by this operator	No
Downstream OGRID that should have notified this operator	[320009] ENLINK MIDSTREAM OPERATING, LP
Date notified of downstream activity requiring this vent or flare	
Time notified of downstream activity requiring this vent or flare	<i>Not answered.</i>

Steps and Actions to Prevent Waste	
For this event, this operator could not have reasonably anticipated the current event and it was beyond this operator's control	True
Please explain reason for why this event was beyond this operator's control	This emissions event was caused by the sudden, unavoidable breakdown of equipment or process that was beyond OXY's control and did not stem from activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and maintenance practices. This unexpected equipment or process failure was caused by a third-party operator, downstream of OXY's custody transfer point, and was beyond OXY's ability to predict, prevent, or control. This emissions event issue did not arise from any upstream activity at OXY's facility that could have been anticipated or avoided, nor could it have been prevented through proper design, operation, or routine maintenance. In this instance, Enlink's emergency shutdown valve (ESD) repeatedly kept closing as they were having continual compression equipment issues. These abrupt and recurring valve closures caused multiple sudden spikes in sales line pressure, exceeding the high-pressure sales line threshold and triggering intermittent flaring events at Mesa Verde 18 CTB. OXY control room staff quickly contacted Enlink's gas control team to investigate the ESD valve issue and learned that it was due to continual compression equipment problems on Enlink's side and were still awaiting for compression mechanics to arrive. During this period, OXY field personnel-initiated activation of storage wells and shut in high GOR wells as necessary to lower sale line pressure below the flare's trigger set points to cease flaring in each instance of intermittent flaring. Although flaring is not OXY's preferred method for handling excess gas, it is necessary to ensure the safety of our operations, equipment, and field personnel. The occurrence of this event was beyond OXY's control. OXY took all possible measures to manage and reduce emissions to the greatest extent.

<p>Steps taken to limit the duration and magnitude of vent or flare</p>	<p>It is OXY's policy to route its stranded gas to a flare during an unforeseen and unavoidable emergency or malfunction, that is beyond OXY's control to avoid, prevent or foresee, to minimize emissions as much as possible as part of the overall steps taken to limit duration and magnitude of flaring. The flare at this facility has 98% combustion efficiency to lessen emissions as much as possible. OXY internal procedures mandate that production technicians promptly assess and respond to unexpected flaring events and ensure the underlying cause is identified. In this instance, Enlink's emergency shutdown valve (ESD) repeatedly kept closing as they were having continual compression equipment issues.
