**Re: Deferral Request
Janie Conner TB
Incident Number nAPP2515826889
Eddy County, New Mexico**

To Whom It May Concern:

Ensolum, LLC (Ensolum), on behalf of Matador Production Company (Matador), has prepared this *Deferral Request* to document assessment and soil sampling activities performed at the Janie Conner TB (Site). The Site is located in in Unit A, Section 14, Township 24 South, Range 28 East, in Eddy County, New Mexico (32.22184°, -104.05117°) and is associated with oil and gas exploration and production operations on private land.

The purpose of the Site assessment and soil sampling activities was to assess for the presence or absence of impacts to soil resulting from a release of produced water, which impacted the lined secondary containment and the pad surface just beyond the containment walls at the Site. Based on field observations, field screening activities, and laboratory analytical results, Matador is submitting this *Deferral Request*, describing Site assessment, delineation, and excavation activities that have occurred and requesting deferral of final remediation for Incident Number nAPP2515826889 until the Site is reconstructed and/or the well pad is abandoned.

BACKGROUND

On June 6, 2025, a poly produced water transfer line ruptured resulting in the release of approximately 32 barrels (bbls) of produced water onto the pad surface and over sprayed into a lined secondary containment; 10 bbls of produced water were recovered, 22 bbls of produced water were unrecoverable. Matador reported the release to the New Mexico Oil Conservation Division (NMOCD) via Notification of Release (NOR) on June 7, 2025, and submitted a Release Notification Form C-141 (C-141) on June 10, 2025. The release was assigned Incident Number nAPP2515826889.

A 48-hour advance notice of a liner inspection was submitted via the NMOCD web portal on July 11, 2025. A liner integrity inspection was conducted by Ensolum personnel on July 16, 2025, and the liner was determined to be insufficient, though the release did not encounter the damaged liner and as a result, the release in question did not migrate vertically through the damaged liner. The Form C-141 can be referenced within the NMOCD Incident Portal.

A request to use the background chloride variance associated with Incident Number nAPP2422623967 was submitted to NMOCD via email on June 9, 2025, and was approved on June 18, 2025.

SITE CHARACTERIZATION AND CLOSURE CRITERIA

The Site was characterized to assess the applicability of Table I, Closure Criteria for Soils Impacted by a Release, of Title 19, Chapter 15, Part 29, Section 12 (19.15.29.12) of the New Mexico Administrative Code (NMAC) Site Assessment/Characterization is described below.

According to the New Mexico Office of the State Engineer (NMOSE), the closest permitted groundwater well with depth to groundwater data is C-04828 POD1, located approximately 0.44 miles south of the Site. The well had a reported depth to groundwater greater than 55 feet below ground surface (bgs) and a total depth of 55 feet bgs. All wells used for depth to groundwater determination are presented on Figure 1. The referenced well record is included in Appendix A.

The closest continuously flowing or significant watercourse to the Site is an irrigation canal, located approximately 311 feet northeast of the Site. The Site is greater than 200 feet from a lakebed, sinkhole, or playa lake and greater than 300 feet from an occupied residence, school, hospital, institution, church, or wetland. The Site is greater than 1,000 feet to a freshwater well or spring and is not within a 100-year floodplain or overlying a subsurface mine. The Site is potentially underlain by unstable geology (medium potential karst designation area). Site receptors are identified on Figure 1.

Based on the results of the desktop Site Characterization, the following NMOCD Table I Closure Criteria (Closure Criteria) *currently* apply:

- Benzene: 10 milligrams per kilogram (mg/kg)
- Benzene, toluene, ethylbenzene, and total xylenes (BTEX): 50 mg/kg
- Total petroleum hydrocarbons (TPH): 100 mg/kg
- Chloride: 600 mg/kg

On January 13, 2025, Ensolum personnel conducted soil sampling around a nearby Site to assess for the presence or absence of naturally occurring chloride in undisturbed soil horizons, in association with Incident Number nAPP2422623967. A total of four background samples (BG01 through BG04) were collected in areas that did not appear to be disturbed by oil and gas operations and at depths ranging from ground surface to 3 feet bgs.

Laboratory analytical results for background delineation soil samples BG01 through BG04, associated with Incident Number nAPP2422623967, indicated concentrations for benzene, BTEX, and TPH were not detected above their respective laboratory reporting limits and chloride concentrations were elevated (696 mg/kg to 27,100 mg/kg) at depths ranging from ground surface to 3 feet bgs. The approved background chloride variance allowed for chloride concentrations to not exceed 11,799 mg/kg at ground surface, 3,972 mg/kg at 1-foot bgs, 3,323 mg/kg at 2 feet bgs, and 2,763 mg/kg at 3 feet bgs.

A Remediation Work Plan (RWP) was submitted by Ensolum on behalf of Matador on December 3, 2025. Due to the presence of naturally occurring chlorides vertical delineation was achieved in accordance within the background chloride range of 696 mg/kg to 27,100 mg/kg. The RWP was approved on December 8, 2025.

SITE ASSESSMENT AND DELINEATION SOIL SAMPLING ACTIVITIES

Beginning on June 11, 2025, Ensolum personnel were onsite to delineate the lateral and vertical extent of the release as indicated by field observations and information provided on the C-141. Eight lateral soil samples (SS01 through SS06, SS05A, and SS06A) were collected at ground surface and 1-foot bgs.

Three boreholes (BH01 through BH03) were advanced via hand auger and gas-powered core drill within the release extent to assess the vertical extent of impacted soil. Boreholes BH01 through BH03 were advanced to depths ranging from 11 feet to 17 feet bgs.

On July 16, 2025, Ensolum personnel returned to the Site to conduct a liner integrity inspection. The lined secondary containment was cleaned of all debris and pressure washed prior to conducting the liner integrity inspection. During the liner inspection, one hole was found outside of the release extent and was subsequently patched. Due to the proximity of the hole to the release extent vertical delineation was not conducted.

On February 18, 2026, Ensolum personnel returned to the Site to further define the lateral extents of the area of requested deferral. Three lateral soil samples (SS07 through SS09) were collected at ground surface around the secondary lined containment.

All delineation soil samples were field screened for chloride and TPH utilizing Hach® chloride QuanTab® test strips and a PetroFLAG® Soil Analyzer System, respectively. Field screening results and observations for the boreholes were logged on lithologic/soil sampling logs, which are included in Appendix B. Photographic documentation of delineation activities is included in Appendix C.

All soil samples were placed directly into pre-cleaned glass jars, labeled with the location, date, time, sampler name, method of analysis, and immediately placed on ice. The soil samples were transported under strict chain-of-custody procedures to Envirotech Analytical Laboratory (Envirotech) in Farmington, New Mexico, for analysis of the following constituents of concern (COCs): BTEX following United States Environmental Protection Agency (EPA) Method 8021B; TPH-gasoline range organics (GRO), TPH-diesel range organics (DRO), and TPH-oil range organics (ORO) following EPA Method 8015M/D; and chloride following EPA Method 300.0.

EXCAVATION AND CONFIRMATION SOIL SAMPLING ACTIVITIES

From January 19 through January 21, 2025, and February 3, 2026, impacted soil was excavated via backhoe, hand-digging, and belly-dump trucks from the release extent outside of containment as indicated by visible staining and delineation soil sampling results. The excavation occurred on the southern and western sides of the lined secondary containment and around associated production equipment. To direct excavation activities, Ensolum personnel field screened soil for chloride and TPH utilizing the same methods described above.

Following removal of impacted soil to the maximum extent practicable (MEP), Ensolum personnel collected 5-point composite soil samples representing no more than 200 square feet from the floor of the release extent and 5-point composite soil samples representing no more than every 200 feet from the sidewalls of the excavation area that extended deeper than 1-foot bgs; in areas of the excavation that were not advanced to a depth of 1-foot bgs or deeper, the sidewalls were included in the composite floor samples. The 5-point composite samples were collected by placing five equivalent aliquots of soil into a resealable plastic bag and homogenizing the samples by thoroughly mixing. Composite soil samples FS01 through FS11 were collected from the floor of the excavation at depths ranging from 0.5 feet to 2 feet bgs. Four confirmation sidewall soil samples (SW01 through SW04) were collected from the excavation areas at depths ranging from ground surface to 2 feet bgs. The excavation soil samples were collected, handled, and analyzed following the same procedures as described above. The excavation extent and excavation soil sample locations are presented on Figure 3.

The final excavation extents measured approximately 1,980 square feet. A total of approximately 40 cubic yards of impacted soil was removed during the excavation activities. The impacted soil was transported and properly disposed of at Lea Land LLC Landfill.

LABORATORY ANALYTICAL RESULTS

Laboratory analytical results for delineation soil samples SS01 through SS04, SS05A, and SS06A were all in compliance with the approved background chloride variance at ground surface and 1-foot bgs. Laboratory analytical results for delineation soil samples SS05 and SS06, exceeded the approved background chloride variance at ground surface and 1-foot bgs, respectively. Laboratory analytical results for boreholes BH02 and BH03 indicated all COCs were in compliance with the approved background chloride variance at ground surface and 2 feet bgs, respectively. The concentrations of chloride in borehole BH01 exceeded the approved background chloride variance at ground surface to 4 feet bgs. Laboratory analytical results for borehole BH03 indicated concentrations for TPH exceeded Site Closure Criteria at ground surface but were in compliance with the Closure Criteria at 2 feet bgs. Laboratory analytical results for borehole BH01 indicated elevated chloride concentrations exceeding the approved chloride variance at ground surface and 4 feet bgs, but concentrations in all boreholes were within the natural range documented in background boreholes BG01 through BG04.

Laboratory analytical results for delineation soil samples SS05 and SS06 were not in compliance with the approved background chloride variance or the Site Closure Criteria; however, chloride concentrations were in the naturally occurring chloride range found in background sample locations BG01 through BG04.

Laboratory analytical results for excavation floor samples FS01 through FS11, collected from the floor of the release extent, were compliant with the approved background chloride variance at depths ranging from ground surface to 1-foot bgs. Laboratory analytical results from confirmation sidewall soil samples SW01, SW03, and SW04, collected at depths ranging from ground surface to 2 feet bgs, were in compliance with the approved background chloride variance. Laboratory analytical results from confirmation sidewall soil sample SW02 exceeded the Site Closure Criteria for TPH and the approved background chloride variance. Laboratory analytical results are summarized in Tables 1, 2, and 3, and the complete laboratory analytical reports are included as Appendix D.

DEFERRAL REQUEST

Matador is requesting deferral of final remediation due to the presence of active production equipment, production tanks and lined secondary containment preventing full excavation of impacted soil. The estimated area of requested deferral is approximately 6,663 square feet in size and assuming an average depth of 4 feet based on the analytical results from delineation borehole BH01 and SW04, approximately 987 cubic yards of impacted soil remain in place. The requested deferral area and delineation soil samples are depicted on Figure 4.

Impacted soil is limited to the area beneath active production equipment and below the secondary lined containment, where remediation would require a major facility deconstruction. The release extent has been laterally defined by delineation soil samples SS01 through SS04, SS05A, SS06A, SS07 through SS09, SW01, SW03, and SW04 collected at ground surface and 1-foot bgs, and vertically defined by boreholes BH01 through BH03, collected depths ranging from ground surface to 17 feet bgs.

Matador does not believe deferral will result in imminent risk to human health, the environment, or groundwater. Depth to groundwater was determined to be greater than 55 feet bgs, and all accessible impacted soil was removed during the excavation activities to the MEP. Based on the presence of active

production equipment within the release area and the complete lateral and vertical delineation of impacted soil remaining in place, Matador requests deferral of final remediation for Incident Number nAPP2515826889 until final reclamation of the well pad or major construction, whichever comes first.

Scott,

Matador Production Company (Matador) had a release at the Janie Conner TB (Site) Incident Number nAPP2515826889 on June 6, 2025. This Site neighbors a previous release at the Janie Conner Slot 2 Well Pad Harold Melton well 13 (Incident Number 2422623967) that has an approved background chloride variance. The chloride variance was approved by Shelly Wells on January 31, 2025. Will the approved background chloride variance also be accepted for this Site? The Site is adjacent to the Janie Conner Slot 2 Well Pad Harold Melton well 13 with a pipeline right-of-way separating the two sites. The background chloride sample locations also neighbor the Site with one being directly to the west, two to the southwest, and one to the south; all of which were collected in preapproved, previously undisturbed, and well vegetated areas, please see the attached map for release and background sample locations.

Thanks,

Subject: [EXTERNAL] Extension Request - Matador Production Company - Janie Conner TB - nAPP2515826889

CAUTION: This email originated outside of our organization. Exercise caution prior to clicking on links or opening attachments.

Mr. Rodgers,

Matador Production Company (Matador) is requesting an extension of the current deadline of September 4, 2025, for submitting a remediation work plan or closure report required in 19.15.29.12.B.(1) NMAC at the Janie Conner TB (Site) (Incident Number nAPP2515826889). The release occurred on June 6, 2025, and 32 barrels (bbls) of produced water were released onto the pad surface; 10 bbls of produced water were recovered. Overspray from the release impacted a lined secondary containment onsite and the remainder of the release impacted an area approximately 1,500 square feet in size on-pad and on Private Land. Ensolum personnel completed a liner integrity inspection on July 16, 2025, and a 48-hour advance notice was submitted to the New Mexico Oil Conservation Division (NMOCD) via web portal on July 11, 2025. During the inspection, one hole was identified in the liner, however the hole was outside of the mapped release extent. Lateral and vertical delineation soil sampling in accordance with the strictest Closure Criteria per NMOCD Table I criteria is currently on-going. Excavation of the subject matter release will begin once delineation soil sampling activities have been completed at the Site. Matador intends to submit a remediation work plan or closure report upon receiving final laboratory analytical data from confirmation sampling activities. Matador respectfully requests a 90-day extension until December 3, 2025. Please let me know if you have any further questions regarding this site.

Thanks

Chad Hamilton

QUESTIONS

Nature and Volume of Release (continued)	
Is this a gas only submission (i.e. only significant Mcf values reported)	No, according to supplied volumes this does not appear to be a "gas only" report.
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	Yes
Reasons why this would be considered a submission for a notification of a major release	From paragraph A. "Major release" determine using: (1) an unauthorized release of a volume, excluding gases, of 25 barrels or more.
<i>With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.</i>	

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.

The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	N/A

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
