This produced water release was discovered by the operator on January 15, 2023. The initial Notification of Release and C-141 form were submitted on February 21, 2023, and approved on February 22, 2023 (OCD Online: Permitting - Application IDs 188707 & 188715). A Corrected C-141 Form can be found in Appendix C. This incident was assigned Incident ID nAPP2305244923 by the New Mexico Oil Conservation Division (NMOCD).

Release Information

nAPP2305244923: On January 15, 2023, a victaulic fitting on a lay flat hose developed a leak, causing fluid to be released. The released fluids were calculated to be approximately 25 barrels (bbls) of produced water. A vacuum truck was able to recover 15 bbls of standing fluid.

Site Characterization

The Mule release area is located approximately twenty (20) miles southeast of Malaga, NM. To correct the previously submitted report (OCD Online: Permitting - Application ID 239946) this spill site is in Unit D, Section 23, Township 25S, Range 31E, Latitude 32.119791 Longitude -103.757122, Eddy County, NM. Figure 1 references a Location Map.

Per the New Mexico Bureau of Geology and Mineral Resources, the geology is made up of Interlayered eolian sands and piedmont-slope deposits along the eastern flank of the Pecos River valley, primarily between Roswell and Carlsbad. Typically capped by thin eolian deposits. The soil in this area is made up of Berino complex, 0 to 3 percent slopes, eroded according to the United States Department of Agriculture Natural Resources Conservation Service soil survey (Appendix B). The drainage class in this area is well drained. Reference Figure 2 for a Topographic Map. There is a low potential for karst geology to be present around the Mule (Figure 3).

According to the New Mexico Office of the State Engineer, depth to the nearest groundwater in this area is 390 feet below grade surface (BGS). According to the United States Geological Survey (USGS), the nearest groundwater is 406 feet BGS. Groundwater information near this well is more than 1/2-mile away and the release area is solely in the pasture so the closure criteria for this release will be classified under the <50' to groundwater section of Table 1 19.15.29.12 NMAC. The closest waterway is Red Bluff Reservoir located approximately 14.94 miles to the southwest of this location. See Appendix A for referenced water surveys and water-related maps.

The closure criteria for this release area will be classified under the less than 50-foot groundwater section of Table 1 19.15.29.12 NMAC as the area lies off the east edge of the pad surface. Chlorides should be 600 mg/kg or less, TPH (GRO+DRO+ORO) should be 100 mg/kg or less, BTEX should be 50 mg/kg or less, and Benzene should be 10 mg/kg or less.

Countermeasures due to Remediation Closure Report Denied

On May 24, 2023, Pima mobilized personnel to the site to begin collecting soil samples for delineation from spill area. Thirty-two (32) discreet samples were collected from within the release area for the purpose of determining vertical delineation. Ten (10) composite samples were collected from the edges of the release for the purpose of determining horizontal delineation. All samples were collected, put on ice, jarred, and delivered to Envirotech Labs for official testing. All samples were tested for all constituents.

The Data Tables containing the laboratory results of this sampling event can be found in Figure 4. A Corrected Site Map can be found in Figure 5 with all sample points labeled and the current image of the release area represented. Photographic Documentation can be found in Appendix D.

On June 8, 2024, Pima returned to the site to complete the delineation process and collect additional soil samples from the release area. Twenty-eight (28) additional samples were collected from within the release area and one (1) sample was collected from the nearby pasture for a background. All samples were collected, put on ice, jarred, and delivered to Envirotech Analytical Laboratories for official testing. All samples were tested for all the constituents listed in Table 1 19.15.29.12 NMAC. The Data Tables containing the results of this sampling event can also be found in Figure 4. A total of 71 samples were collected during the combined sampling events. Complete Laboratory Reports can be referenced in Appendix E.

On July 16, 2024, the NMOCD denied the remediation closure report citing: "The OCD has rejected the submitted Application for administrative approval of a release notification and corrective action (C-141), for incident ID (n#) nAPP2305244923, for the following reasons:

- **On the C-141 form where it says, "Is the concentration of dissolved chloride in the produced water >10,000 mg/l? If the "No" box is checked, the OCD will need a water sample taken from the water source. Please provide these results in the resubmission.**

The rejected C-141 can be found in the OCD Online: Permitting - Action Status, under the Application ID: 357039. Please review and make the required correction(s) prior to resubmitting. If you have any questions why this application was rejected or believe it was rejected in error, please contact me prior to submitting an additional C-141."

On July 16, 2024, Pima and Devon began investigating the water source for the frac at this site due to the presence of three lay-flat hoses. The Devon Completions Department identified the water source as the Cotton Draw 22 Water Treatment Facility and provided a Water Analysis Report (Figure 6) from May 30, 2024. This report includes detailed analytical data, with a chloride concentration of 76,874 mg/L. The facility's location is shown in the Water Source Location Map (Figure 7).

Explanation Summary

*To whom it may concern (c/o Dale Woodall for DEVON ENERGY PRODUCTION COMPANY, LP),
The OCD has rejected the submitted Application for administrative approval of a release notification and corrective action (C-141), for incident ID (n#) nAPP2305244923, for the following reasons:*

- ***The Remediation Closure Report is Denied. Looking at the photos, it appears no excavation took place at this site. Please explain how the samples showed essentially no contaminants in the lab analyzed soil samples for chlorides, while the source water sample from the Cotton Draw 22 Water Treatment Facility was 76,874 mg/L. Also, please explain how five-point composite sidewall samples SW 1 and SW 2 (0-4' Comp) were completed, when there was no excavation.***

*The rejected C-141 can be found in the OCD Online: Permitting - Action Status, under the Application ID: 370483.
Please review and make the required correction(s) prior to resubmitting. If you have any questions why this application was rejected or believe it was rejected in error, please contact me prior to submitting an additional C-141.*

In response to the denial, the reported GPS coordinates on the initial C-141 form do, in fact, match those in this report and are specific to the #822H wellhead location. However, further research into Devon's internal reporting system identified the actual GPS coordinates for the initial point of release as 32.1204928 latitude, -103.74948743 longitude, located just east of the wellhead along the eastern edge of the pad surface. Initial post-release photos confirm this information. As a result, the area previously tested—on two separate occasions over the past two years—was not the correct release site, explaining the absence of contamination in those tests.

This produced water release occurred during water transfer activities while a third-party contractor was supplying water for drilling and fracking operations on the pad surface. The contractor remediated the area; however, communication with Devon and proper documentation of the remediation were inadvertently overlooked. Devon now proposes to collect samples to assess whether contamination remains in the area of concern and will remediate any contamination found.

On January 27, 2025, a remediation work plan was submitted for the proposed sampling and remediation of the corrected release area. This plan was conditionally approved, on February 21, 2025, by the NMOCD citing: "The Remediation Plan is Conditionally

Approved. The Variance Request is Denied for 400 ft² confirmation samples. The Variance Request to use delineation samples as confirmation samples is Denied. Water analysis from the source shows this is a very highly concentrated chloride produced water release. Make sure the soil samples are properly taken/handled, and correct sampling protocol is followed. Floor confirmation samples should be delineated/excavated to meet closure criteria standards from Table 1 of the OCD Spill Rule for site assessment/characterization/proven depth to water determination. Sidewall/Edge samples should be delineated/excavated to 600 mg/kg for chlorides and 100 mg/kg for TPH to define the edge of the release. The release area will need confirmation floor/sidewall samples representing no more than 200 ft². All sidewall samples should be taken from the sidewall of the excavation. All off-pad areas must meet OCD reclamation/revegetation standards. The Proposed Sampling Map included in the approved work plan can be seen in Figure 8.

Remediation/Sampling Activities

On February 27, 2025, after Devon submitted a 48-hour notification of sampling (Appendix C), Pima personnel mobilized to the site to collect the proposed samples. The new, correct area of concern measures approximately 3,629 square feet on the east edge of the pad. Discrete samples were collected from within and around the edges of this release area to evaluate the presence of contaminants. Fifty (50) samples were collected from 10 different sample points within the release area from depths of surface, 1', 2', 3', and 4' bgs. Thirty (30) samples were collected from 6 different sample points around the edges of the release area from depths of surface, 1', 2', 3', and 4' bgs. Two (2) samples were collected from 2 different sample points in the pasture to serve as background samples. These samples were collected from a depth of 1' bgs. All samples will be put on ice, prepared for delivery, then delivered to Envirotech Analytical Laboratories where they will be analyzed for all the constituents listed in Table 1 19.15.29.12 NMAC.

On March 6 and 7, 2025, the analytical report was received and verified that all but two (2) sample points showed results (Figure 4) that were under the regulatory limits as per the less than 50-foot depth to groundwater section of Table 1 19.15.29.12 NMAC. Sample points 5 and 9 showed results for TPH at depths of 1' and 3' bgs that were over the regulatory limits. Complete Laboratory Reports can be found in Appendix E.

On March 17, 2025, the Devon construction department and Pima mobilized personnel and equipment to the site to begin remediating the sample points 5 and 9. The areas surrounding each sample point were measured out to approximately 400 square feet each. Sample point 5 was excavated to a depth of 4' bgs, and sample point 9 was excavated to a depth of 2' bgs. Approximately 89 cubic yards of contaminated soil were removed and hauled to a NMOCD-approved disposal facility. Clean, like material was brought back to the site and stockpiled for backfilling the excavation.

On March 19, 2025, after Devon submitted a 48-hour notification of sampling (Appendix C), Pima personnel mobilized to the site to collect 5-point composite confirmation samples of the excavations. From the sample point 5 excavation, ten (10) subsamples were collected to form 2 different 5-point composite samples from the base of the excavation. Fifteen (15) subsamples were collected to form 3 different 5-point composite samples from the walls of the excavation where the perimeter is calculated to be 80 linear feet, and the depth is 4' bgs. From the sample point 9 excavation, ten (10) subsamples were collected to form 2 different 5-point composite samples from the base of the excavation. Ten (10) subsamples were collected to form 2 different 5-point composite samples from the walls of the excavation where the perimeter is calculated to be 80 linear feet, and the depth is 2' bgs. All samples were put on ice, prepared for delivery, then delivered to Envirotech Analytical Laboratories where they were analyzed for all the constituents listed in Table 1 19.15.29.12 NMAC.

On March 21, 2025, the analytical report was received and verified that all samples reported results (Figure 4) that were under the regulatory limits as per the less than 50-foot depth to groundwater section of Table 1 19.15.29.12 NMAC. Complete Laboratory Reports can be found in Appendix E. A Confirmation Sample Map can be found in Figure 9.

A Remediation Closure Report was submitted to the NMOCD on April 8, 2025, and was approved on April 9, 2026 (Permitting Action Status, under the Application ID: 449490).

This incident was remediated to reclamation standards ensuring 4' feet of soil in this area includes non-waste containing, earthen material with chloride levels that are less than 600 mg/kg and TPH concentrations less than 100 mg/kg per 19.15.29.13 NMAC. Pima Environmental returned to the Mule on April 13, 2026, to collect two composite backfill samples from the areas that were previously excavated and backfilled with clean material. The results of this sampling event can be found in Figure 4. A complete Laboratory Report can be found in Appendix E.

Reclamation Activities

Seeding will be completed in May 2026. Devon personnel will monitor vegetative growth to ensure the reclamation activities performed were sufficient. Monitoring will include inspections conducted at least semi-annually until revegetation is considered complete. The inspections will include monitoring and treating the reclamation for unauthorized traffic, erosion, and invasive or

noxious weeds. When it has been determined that vegetation has been established that reflects pre-disturbance vegetation cover with a total percent plant cover of greater than 70% of pre-disturbance area levels, excluding invasive or noxious weeds, a final revegetation report will be submitted for review or approval.

Approval Request

Devon requests that this reclamation closure report for the incident, nAPP2305244923, be approved. Devon has complied with the applicable requirements outlined in rules 19.15.29.12 and 19.15.29.13 NMAC.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:20,000.

Warning: Soil Map may not be valid at this scale.
 Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
 Web Soil Survey URL:
 Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Eddy Area, New Mexico
 Survey Area Data: Version 20, Sep 3, 2024

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Feb 7, 2020—May 12, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

QUESTIONS

Nature and Volume of Release (continued)	
Is this a gas only submission (i.e. only significant Mcf values reported)	No, according to supplied volumes this does not appear to be a "gas only" report.
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	Yes
Reasons why this would be considered a submission for a notification of a major release	From paragraph A. "Major release" determine using: (1) an unauthorized release of a volume, excluding gases, of 25 barrels or more.
<i>With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.</i>	

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.

The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	Not answered.

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
