Executive Summary

Devon Energy Production Company, LP (Devon) retained Vertex Resource Services Inc. (Vertex) to conduct a site assessment and remediation work plan for three produced water releases and one crude oil release on the Laguna Salado 22 Federal CTB facility pad (fAPP2123648054; hereafter referred to as site"). This remediation work plan report provides a description of the characterization and remediation activities to date. In addition, this workplan proposes additional remedial actions for the four releases.

The four incidents occurred on the facility pad between January 2015 and August 2025. The three produced water releases initially overlapped each other and likely intermingled further across the pad over time. Vertex characterized the greater pad area between August 2025 and April 2026. Initial remediation of the visually stained areas of the pad was completed in March 2026. Characterization and initial remediation sampling revealed multiple areas in exceedance for total petroleum hydrocarbons (TPH).

Characterization of the facility pad also yielded a wide range of chloride concentrations from samples across the pad. The facility pad is located immediately adjacent to Salt Lake and is within four vertical feet of the subsurface lake water. Salt Lake is currently used for salt mineral extraction. The facility pad surface is within the vadose zone of the subsurface Salt Lake and serves as an avenue for the transport of salt to the surface by way of capillary action. Delineation of the produced water releases was not possible due the interference of local salt accumulation. It was determined that the remediation would concentrate on removal of hydrocarbons from the site.

Based on characterization results, ten areas of interest were identified at the site. The proposed remedial actions are to remediate each of the areas of interest with excavation to the most stringent closure criteria for TPH and BTEX. Chloride concentrations will be tracked but not used to determine remediation extent.

1.0 Introduction

Devon Energy Production Company, LP (Devon) retained Vertex Resource Services Inc. (Vertex) to conduct a site assessment, characterization, and remediation work plan for four releases that occurred between 2015 and 2025 on the facility pad shared by the Laguna Salado South #001 (30-015-26407) well, Laguna Salado 22 Federal #005H (30-015-36738) well, and Laguna Salado 22 Federal CTB (fAPP2123648054; hereafter referred to "site"). This Remediation Work Plan discusses characterization and remedial actions to date and proposes additional remediation activities.

2.0 Background

2.1 Associated Environmental Incidents

There are four reported open environmental incidents associated with the site according to a NMOCD Incidents and Spill search.

- Incident nAB1506157520 was assigned to Laguna Salado South #001 for the January 22, 2015 release of 8 bbl of crude oil adjacent to the production equipment; characterization and remediation work was initially started by a different consultant.
- Incident nAB1627737279 was assigned to Laguna Salado 22 Federal #005H for the September 24, 2016 release of 195 bbl of produced water across the south side of the facility pad.
- Incidents nAPP2518820900 was assigned to Laguna Salado 22 Fed CTB for the July 6, 2025 release of 24 bbl of produced water onto the facility pad.
- Incident nAPP2522049655 was assigned to Laguna Salado 22 Fed CTB for the August 7, 2025 release of 18 bbl of produced water on the facility pad.

Additional details relevant to the releases are presented in the respective C-141 Reports (Appendix A). Approximate release and/or impacted areas are presented on Figures 1 and 2. The area of environmental concern is the pad surface.

2.2 Access

The site is located approximately 6.5 miles east of Loving, New Mexico on lands owned by Mozaic Potash Carlsbad Inc. (Mozaic). An aerial photograph and site schematic are presented on Figure 1.

Lease Holder: Devon Energy Production Company, LP
Lease Serial Number: NMNM 066425
Unit Letter F, Section 22, Township 23 South, Range 29 East
Eddy County
Latitude, Longitude: 32.2921493, -103.9748478

The site can be accessed from the intersection of NM-128 and Rawhide Road. Drive south on Rawhide Road for 4.1 miles and turn right to stay on Rawhide Road. Continue west on Rawhide Road and turn right onto an oilfield lease road. Drive north on the oilfield lease road to the site located on the west side of the road. There are no locked gates or other access issues.

2.3 Site Description

The site is an active production and facility pad for oil and gas operations, with two oil wells, a tank battery and associated production equipment operated by Devon (Figure 1). An additional tank battery operated by Permian Resources Operating, LLC (Permian; formerly Novo Oil & Gas Northern Delaware, LLC) is present on the southwest corner of the facility pad (Laguna Salado 22 Federal #002 Battery). Surface minerals are owned by Mozaic and subsurface minerals are owned by the Bureau of Land Management (BLM). The site is located on a slope immediately adjacent to Salt Lake and surrounding vegetation is patchy and variable depending on interactions with Salt Lake.

The Laguna Salado South #001 and Laguna Salado 22 Federal #005H wells are located in the center of the facility pad. The Laguna Salado 22 Federal CTB is located east of the center of the south side of the pad. Production equipment supporting the Laguna Salado 22 Federal CTB is located on the northeast corner of the facility pad. The Laguna Salado South #001, Laguna Salado 22 Federal #005, and Laguna Salado 22 Federal CTB are all operated by Devon. Production equipment locations are presented in Figure 1.

The Laguna Salado 22 Federal #002 tank battery and production equipment located on the southwest corner of the facility pad is associated with the Laguna Salado 22 Federal #002 well located on a separate pad northeast of the site; both the well and battery are operated by Permian Resources Operating, LLC (formerly Novo Oil & Gas Northern Delaware, LLC).

2.4 Cultural Resources Compliance

After a site assessment, the defined work areas were situated within the boundaries of historical disturbance from the construction of the production pad. As such, any additional work will remain confined within areas of historical disturbances.

Should any remediation or reclamation activities encounter any cultural properties during the course of the reclamation activities, appropriate measures will be taken in accordance with federal regulations, including immediate cessation of work and notification to BLM.

2.5 Ecological Setting

The site is situated in the Chihuahuan Basins and Playas level IV 24a Ecoregion (Griffith et al., 2006). This ecoregion is characterized as having the following natural vegetation: gyp grama, gyp mentzelia, and Torrey ephedra. The site is within the Cottonwood-Reeves loams (Appendix B) and classified as "Not prime farmland."

The Cottonwood typical soil profile consists of:

- H1 – 0 to 9 inches: loam
- H2 – 9 to 60 inches: bedrock

With a depth to paralithic bedrock restrictive layer between 3 and 12 inches.

The Reeves typical soil profile consists of:

- H1 - 0 to 8 inches: loam
- H2 - 8 to 32 inches: clay loam
- H3 - 32 to 60 inches: gypsiferous material

With a depth to a restrictive layer more than 80 inches.

Mean annual air temperature is between 60 and 64 °F. Mean annual precipitation is between 10 to 14 inches and the frost-free period is between 200 and 220 days.

2.6 Biological Compliance

Review of critical habitats identified nine potentially affected species and no critical habitats. The biological desktop review is included in Appendix D. Critical habitats reviewed include:

- Birds
- Fishes
- Insects
- Refuge Lands
- Fish Hatcheries
- Wetlands

While no critical habitat was identified, remediation activities will proceed with caution in order to avoid potential impacts to threatened or proposed threatened species including, but not limited to, northern aplomado falcon, piping plover, texas hornshell clam, and monarch butterfly.

If any special status species are encountered during remediation activities, appropriate measures will be implemented. These measures will include immediate cessation of work in the affected area, consultation with a qualified biologist, and coordination with BLM and relevant environmental agencies to determine the necessary protection and mitigation strategies.

3.0 Site Evaluation

Site characterization was completed between August 16, 2025 and April 17, 2026. Documentation of the site visits are included in the Daily Field Reports (DFRs; Appendix C). The berm around the south and west edges of the site successfully confined the releases to the active facility pad. The area of impact of the historical crude oil release was approximated northwest of the production equipment based on historical imagery and photographs of the release. The historical produced water release area was approximated based on photographs of the release. The 2025 release areas were mapped soon after they occurred, respectively. Approximate release areas for the produced water incidents and area of impact for the crude oil incident are presented on Figures 1 and 2.

The produced water releases overlap each other in multiple locations, especially around the center of the facility pad. Precipitation and on-pad traffic has likely expanded the impact areas across the pad over time. Surface staining and salt crusts were visible over multiple areas of the pad surface, some consistent with mapped release areas and some set apart from the original release areas.

The site is adjacent to Salt Lake, which is actively used for mineral extraction by United Salt and Mosaic. The surface of the facility pad is potentially located four feet from subsurface water. The facility pad is within the capillary fringe of the subsurface lake water. Water and constituent dissolved solids are transported vertically from the subsurface water to the soil surface through capillary action. Evaporation of water from the soil surface leaves elevated concentrations of salts behind.

On February 20, 2026, Vertex personnel waded into Salt Lake and collected three soil samples from the sediments immediately below the water of the lake. Lake soil sample locations are presented on Figure 1 and laboratory results are summarized in Table 1. The laboratory results for the lake sediment sample serve as references for the potential dissolved solids in the local brine.

The concentrations of chloride in the lake sediments and the proximity of the water surface to the facility pad make imposing chloride thresholds extremely difficult. In addition, ground disturbance is to be minimized within four feet of the water table.

3.1 Assessment of Soil Suitability

Salt Lake and its hydraulically connected subsurface water is assumed to be unprotected water with respect to native dissolved solids and produced water influence. The nearest depth to groundwater references to the site are monitoring wells C 02707 and C 04326 POD14, located 1.07 miles southwest and 1.08 miles southeast of the site, respectively. The measured depth to groundwater at C 02707 was 18 feet below ground surface (bgs) on June 9, 2000. The measured depth to groundwater at C 04326 POD14 was 48 feet bgs on May 11, 2019. The physically measured depth to subsurface lake water on the pad was as shallow as 4 feet bgs at multiple test pits. The site is within the 100-year floodplain for Salt Lake and the karst geology potential for the area is medium. Information pertaining to the depth to groundwater and closure criteria determination is summarized in Table 2 and included in Appendix B.

Salt Lake is either immediately adjacent to the site or up to 40 feet from the site depending on lake water level. Water was encountered at four feet bgs at multiple locations when exploratory test pits were excavated on the facility pad. Immediate proximity to Salt Lake and corresponding subsurface water introduces dissolved solids that interfere with the detection of produced water. It was determined that chloride remediation was impractical in an area with constant input of naturally occurring salt. Chloride was removed from the constituents of concern and the remediation focus was narrowed to the hydrocarbon constituents. Closure criteria determination is demonstrated in Appendix B and summarized in Table 2. The most stringent closure criteria per NMAC 19.15.29 were applied to total petroleum hydrocarbons (TPH) and benzene, toluene, ethylbenzene and xylenes (BTEX).

3.2 Characterization

The produced water releases cover a significant proportion of the facility pad. Delineation was completed for the greater pad area, rather than for the individual release areas. The constituents of concern were TPH and BTEX. A total of 46 boreholes and 19 surface sample locations were advanced and samples collected for field screening. In total, 162 characterization samples were submitted to Eurofins Laboratory in Albuquerque, New Mexico, for analysis. The sample locations are presented on Figure 2. Field screening and laboratory results from the characterization activity are summarized in Table 4. Field screening results were included to illustrate the full scope of characterization. Laboratory data reports and chain of custody forms are located in Appendix E.

4.0 Remediation Work Plan

4.1 Remedial Actions Completed

Stained areas and areas identified with hydrocarbons were prioritized for initial remediation. Vertex personnel identified areas of the pad surface with visible staining and salt crust as locations for initial remediation efforts. Initial remediation efforts were executed between February 20 and 25, 2026. Vertex personnel supervised the excavation of impacted soils from the designated areas to 0.5 feet bgs. Relevant DFRs documenting various phases of the remediation are presented in Appendix C.

Notification that confirmation samples were being collected was provided to the appropriate regulatory agencies prior to sample collection. Confirmation composite samples were collected from the walls of the excavations in increments no greater than 200 square feet. A total of 83 base samples and 9 wall samples were collected following NMOCD soil sampling procedures and field screened for TPH. Field screening results for multiple base and wall samples were in exceedance for TPH. Two excavation wall samples and 37 base samples were selected to submit for laboratory analyses. The composite samples were placed into laboratory-provided containers, preserved on ice, and submitted to Eurofins Environment Testing in Albuquerque, New Mexico under chain of-custody protocols, and analyzed for BTEX (EPA Method 8021B), TPH (GRO, DRO, MRO – EPA Method 8015D) and total chloride (EPA SM4500CL-E). A Summary of field screening and laboratory results are presented in Table 5 and the laboratory data reports are included in Appendix E. Confirmation sample locations are shown on Figure 3. The laboratory results for the select confirmation samples collected and analyzed were below the most stringent closure criteria for BTEX and TPH. Chloride concentrations ranged from 4,000 to 40,000 across the excavations.

Numerous exceedances to TPH field screening results indicated that excavations to 0.5 feet bgs were insufficient for remediation in multiple areas. It was determined that the existing excavations needed to be expanded to remove the remaining hydrocarbons, and an additional excavation would be established on the west edge of the pad to remove hydrocarbons near the flares. Areas of interest requiring additional excavation are presented in Figure 4.

4.2 Proposed Remedial Actions

Areas with exceedances to TPH were divided into ten (10) separate Areas of Interest (AOI) which are presented on Figure 4. Unsuitable soils (see Section 3.1 for definition) will be remediated through excavation and transported to an approved disposal facility. Laboratory results from the site assessment/characterization and field screening results from the initial confirmation samples have been referenced to estimate both the vertical and horizontal limits of the impacts and the volume of soil to be removed. Soil will be excavated to the extent of the known contamination. Field screening will be utilized to find the horizontal and vertical extents of the impacted area and confirm removal of soil exceeding the applicable closure criteria. Each AOI will be remediated to the most stringent closure criteria for BTEX and TPH.

Confirmation soil samples will be collected from the excavation bases and walls per NMOCD approval and submitted for laboratory analysis for Chloride, BTEX, Benzene, and TPH. Chloride results will be recorded but not used to determine remediation extents. Upon laboratory confirmation, the excavation areas will be backfilled with clean soil sourced locally. Any existing berms or containment features built into the site that may be removed through excavation will be rebuilt upon completion of remedial activities. Remediation areas are discussed individually below and presented on Figure 4.

4.2.1 AOI #1 Remediation

The AOI 1 is along the north edge of the facility pad and adjacent to the northwest corner of the production equipment. Field screening results at the base of the initial excavation to 0.5 feet bgs exceeded 100 ppm TPH for the majority of attempted confirmation samples. The proposed excavation at AOI 1 will increase in depth to at least 1 foot bgs and expand horizontally until the above closure criteria are met.

4.2.2 AOI #2 Remediation

The AOI 2 is between the Laguna Salado 22 Federal #005H and Laguna Salado South #001 wells. Field screening results at the base of the initial excavation to 0.5 feet bgs exceeded 100 ppm TPH for all of the attempted confirmation samples. The proposed excavation at AOI 2 will increase depths to a range of at least 1 foot bgs to 3 feet bgs respective of previous sampling results. The excavation will expand horizontally and vertically as needed until the above closure criteria are met.

4.2.3 AOI #3 Remediation

The AOI 3 is east of the Permian/Novo tank battery. Field screening results at the base of the initial excavation to 0.5 feet bgs exceeded 100 ppm TPH at that confirmation sample location. The proposed excavation at AOI 3 will increase in depth to at least 1 foot bgs and expand horizontally west and southwest until the above closure criteria are met.

4.2.4 AOI #4 Remediation

The AOI 4 is between the Permian/Novo and Devon tank batteries. Field screening results at the base of the initial excavation to 0.5 feet bgs exceeded 100 ppm TPH for the majority of attempted confirmation samples. Laboratory results at BH26-28 indicate TPH greater than 100 ppm at 1 foot bgs. The proposed excavation at AOI 4 will increase depths to a range of at least 1 foot bgs to 1.5 feet bgs respective of previous sampling results. The excavation will expand horizontally and vertically as needed until the above closure criteria are met.

4.2.5 AOI #5 Remediation

The AOI 5 is north of the Laguna Salado South #001 pump jack. Field screening results at the base of the initial excavation to 0.5 feet bgs exceeded 100 ppm TPH for the attempted confirmation samples. Laboratory results at BH26-43 indicate TPH greater than 100 ppm at 1.5 feet bgs. The proposed excavation at AOI 5 will increase depth to at least 2 feet bgs and expand horizontally as needed until the above closure criteria are met.

4.2.6 AOI #6 Remediation

The AOI 6 is south and southeast of the Laguna Salado South #001 pump jack. Field screening results at the base of the initial excavation to 0.5 feet bgs exceeded 100 ppm TPH for the attempted confirmation samples. Laboratory results at BH26-42 confirm TPH greater than 100 ppm at 0.5 feet bgs. The proposed excavation at AOI 6 will increase depth to at least 1 foot bgs and expand horizontally as needed until the above closure criteria are met.

4.2.7 AOI #7 Remediation

The AOI 7 is northeast of the Devon tank battery. Field screening results at the base of the initial excavation to 0.5 feet bgs exceeded 100 ppm TPH for the majority of attempted confirmation samples. The proposed excavation at AOI 7 will increase in depth to at least 1 foot bgs and expand horizontally until the above closure criteria are met.

4.2.8 AOI #8 Remediation

The AOI 8 immediately south of the Devon production equipment. Field screening results at the base of the initial excavation to 0.5 feet bgs exceeded 100 ppm TPH for the attempted confirmation sample location. The proposed excavation at AOI 8 will increase in depth to at least 1 foot bgs and expand horizontally if needed until the above closure criteria are met.

4.2.9 AOI #9 Remediation

The AOI 9 is between the Devon tank battery and the lease road. Field screening results at the base of the initial excavation to 0.5 feet bgs exceeded 100 ppm TPH for the attempted confirmation sample location. The proposed excavation at AOI 9 will increase in depth to at least 1 foot bgs and expand horizontally if needed until the above closure criteria are met.

4.2.10 AOI #10 Remediation

The AOI 10 is on the west edge of the pad, immediately west of two flares. Laboratory results at BH26-27 indicate TPH greater than 100 ppm at 2 feet bgs. The proposed excavation depth at AOI 10 will be at least 2.5 feet bgs and expand horizontally as needed until the above closure criteria are met.

4.3 Variance Requests

4.3.1 Constituent of Concern Variance Request

As established and approved in the remediation plan for Laguna Salado 22 Federal #004 incident nKMW1109729911 on April 10, 2025, areas within 4 feet of the water table experience upward brine migration that impacts the salinity of the soil (Figure 5). Within 4 feet of the brine water table, it becomes impossible to distinguish between any effects of produced water versus the preexisting brine. In this zone, deeper excavation often results in an increase in chloride value. In addition, due to saturation of the soil, mechanical operation becomes technologically unfeasible in this zone. As previously established, the addition of chlorides into the brine lake fluid does not pose any risk to human health, the environment, or any hydraulic receptors. Due to the previous acceptance of this variance and the expectation of encountering similar issues at this site, Vertex on behalf of Devon, requests a variance for any chloride concentration found within 4 feet vertically of the hydraulically connected brine lake subsurface water.

4.3.2 Soil Sample Variance Request

The initial remediation excavation base areas were approximately 33,176 square feet. The AOI's propose further horizontal expansion of the excavations. The total "base" area to be sampled upon completion of remedial activities will be at least 41,268 square feet. On behalf of Devon, Vertex would like to request a variance for confirmation sampling due to the large base sampling area. This variance request will consist of five-point composite samples for every 400 square feet of excavation base. Excavation wall samples will utilize five-point composite samples representative of no more than 200 square feet. Additional discrete grab samples will be collected from areas with discoloration and analyzed for chloride (EPA SM4500CL-E), benzene, toluene, ethylbenzene, and xylenes (EPA 8021B), and TPH (EPA 8015D) depending on field screening results.

5.0 Surface Restoration Acknowledgement

5.1 Extent of Remediation

The initial remediation activities and the minimum extent of the proposed activities excavations combined will cover approximately 41,268 square feet. The minimum estimated volume of material to remove is approximately 1,050 cubic yards.

5.2 Site Restoration

After remedial actions, disturbed surfaces will be restored to an active production pad. Remediated soils will be replaced with clean, non-waste containing material (caliche) suitable to support oil and gas activities. When the production site is no longer in use for oil and gas operations, the surface shall be remediated, restored, and reclaimed per 19.15.29.13.A-D or as is otherwise agreed upon.

5.3 Final Reclamation

When the site is no longer in-use for oil and gas operations, the surface will be reclaimed as pastureland according to State regulations in-place at the time of final site decommissioning and abandonment.

6.0 Proposed Schedule

The excavation is planned to be completed within 90 days of approval of this Remediation Work Plan.

This map was exported on 8/9/2022 at 3:42 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:20,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Eddy Area, New Mexico
Survey Area Data: Version 17, Sep 12, 2021

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Feb 7, 2020—May 12, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or

Time Observations

08:16:34	Technicians arrived on site, completed safety paperwork and conducted a tailgate meeting.
08:42:25	Second day sweeps were conducted by both vertex personnel and Kelly personnel before ground disturbance occurs at each point. Kelly uses a VM-810.
09:19:44	Encountered water at BH26-23 at depth of 4 feet. Remaining BH samples will not exceed 3' in depth.
10:51:20	Manager requested 3 additional exploratory points for water table determination.
15:43:20	Kelly operator ended work on site around 2:30pm. All test pits were closed end of day. Vertex Personnel Ethan Phillips left site around 3:00pm to begin jarring samples at the office. Vertex personnel Katrina Taylor left site around 4:00.
15:44:59	All samples from boreholes 23 to 30 were field screened on site. Water was encountered at Boreholes 23, 29, and 31. Soil was wet at Boreholes 26 and 27 at 3ft bgs.

Thank you for your recent request for information on federally listed species and important wildlife habitats that may occur in your project area. The U.S. Fish and Wildlife Service (Service) has responsibility for certain species of New Mexico wildlife under the Endangered Species Act (ESA) of 1973 as amended (16 USC 1531 *et seq.*), the Migratory Bird Treaty Act as amended (16 USC 701-715), and the Bald and Golden Eagle Protection Act as amended (16 USC 668-668(c)). We are providing the following guidance to assist you in determining which federally imperiled species may or may not occur within your project area, and to recommend some conservation measures that can be included in your project design.

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the ESA of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the ESA, the accuracy of this species list should be verified after 90 days. The Service recommends that verification be completed by visiting the IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the IPaC system by completing the same process used to receive the enclosed list.

The purpose of the ESA is to provide a means whereby threatened and endangered species and

the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the ESA and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (NEPA; 42 USC 4332(2) (c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at <https://www.fws.gov/sites/default/files/documents/endangered-species-consultation-handbook.pdf>.

Candidate Species and Other Sensitive Species

A list of candidate and other sensitive species in your area is also attached. Candidate species and other sensitive species are species that have no legal protection under the ESA, although we recommend that candidate and other sensitive species be included in your surveys and considered for planning purposes. The Service monitors the status of these species. If significant declines occur, these species could potentially be listed. Therefore, actions that may contribute to their decline should be avoided.

Lists of sensitive species including State-listed endangered and threatened species are compiled by New Mexico State agencies. These lists, along with species information, can be found at the following websites.

Biota Information System of New Mexico (BISON-M): www.bison-m.org

WETLANDS AND FLOODPLAINS

Under Executive Orders 11988 and 11990, Federal agencies are required to minimize the destruction, loss, or degradation of wetlands and floodplains, and preserve and enhance their natural and beneficial values. These habitats should be conserved through avoidance, or mitigated to ensure that there would be no net loss of wetlands function and value.

We encourage you to use the National Wetland Inventory (NWI) maps in conjunction with ground-truthing to identify wetlands occurring in your project area. The Service's NWI program website, www.fws.gov/wetlands/Data/Mapper.html, integrates digital map data with other resource information. We also recommend you contact the U.S. Army Corps of Engineers for permitting requirements under section 404 of the Clean Water Act if your proposed action could impact floodplains or wetlands.

MIGRATORY BIRDS

In addition to responsibilities to protect threatened and endangered species under the ESA, there are additional responsibilities under the Migratory Bird Treaty Act (MBTA) and the Bald and Golden Eagle Protection Act (BGEPA) to protect native birds from project-related impacts. Any activity resulting in take of migratory birds, including eagles, is prohibited unless otherwise permitted by the Service (50 CFR 10.12 and 16 USC 668(a)). For more information regarding these Acts, see <https://www.fws.gov/program/migratory-bird-permit/what-we-do>.

It is the responsibility of the project proponent to comply with these Acts by identifying potential impacts to migratory birds and eagles within applicable NEPA documents (when there is a Federal nexus) or a Bird/Eagle Conservation Plan (when there is no Federal nexus). Proponents should implement conservation measures to avoid or minimize the production of project-related stressors or minimize the exposure of birds and their resources to the project-related stressors. For more information on avian stressors and recommended conservation measures, see <https://www.fws.gov/library/collections/threats-birds>. We also recommend review of the Birds of Conservation Concern list (<https://www.fws.gov/media/birds-conservation-concern-2021>) to fully evaluate the effects to the birds at your site. This list identifies migratory and non-migratory bird species (beyond those already designated as federally threatened or endangered) that represent top conservation priorities for the Service, and are potentially threatened by disturbance, habitat impacts, or other project development activities.

In addition to MBTA and BGEPA, Executive Order 13186: *Responsibilities of Federal Agencies to Protect Migratory Birds*, obligates all Federal agencies that engage in or authorize activities that might affect migratory birds, to minimize those effects and encourage conservation measures that will improve bird populations. Executive Order 13186 thereby provides additional protection for both migratory birds and migratory bird habitat. Please visit <https://www.fws.gov/partner/council-conservation-migratory-birds> for information regarding the implementation of Executive Order 13186.

We suggest you contact the New Mexico Department of Game and Fish, and the New Mexico

For further consultation with the Service we recommend submitting inquiries or assessments electronically to our incoming email box at nmesfo@fws.gov, where it will be more promptly routed to the appropriate biologist for review.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. ENDANGERED SPECIES ACT SPECIES

There is a total of 4 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries¹, as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Job Narrative 885-31812-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt

The samples were received on 8/26/2025 7:40 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.3°C.

Job Narrative 885-33951-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt

The samples were received on 9/23/2025 7:45 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 4.2°C.

Job Narrative 885-36331-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt

The samples were received on 10/28/2025 7:55 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.6°C.

Method 8015MOD_NM: The following sample was received outside of holding time: BH25-16 0ft (885-36331-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

Method 300_ORGFM_28D - Soluble: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-122277 and analytical batch 880-122475 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative 885-41699-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt

The samples were received on 1/21/2026 7:35 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.0°C.

Gasoline Range Organics

Method 8015M/D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 885-41723 and analytical batch 885-42163 were outside control limits for one or more analytes. See QC Sample Results for detail. Analyst spiking error is suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC VOA

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative 885-41701-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt

The samples were received on 1/21/2026 7:35 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.5°C.

Job Narrative 885-47672-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt

The samples were received on 4/18/2026 7:56 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 5.2°C.

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
F1	MS and/or MSD recovery exceeds control limits.

Job Narrative 885-47742-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt

The samples were received on 4/21/2026 7:35 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 3.5°C.

Gasoline Range Organics

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC VOA

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics

Method 8015M/D: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 885-47291 and analytical batch 885-47320 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative 885-45729-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt

The samples were received on 3/20/2026 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 3.4°C.

Gasoline Range Organics

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC VOA

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics

Method 8015M/D: The continuing calibration verification (CCV) associated with batch 885-45387 recovered outside acceptance criteria, low biased, for Di-n-octyl phthalate (Surr). The Diesel Range Organics was acceptable so the data is flagged and reported. The following sample is associated (CCV 885-45387/47).

Method 8015M/D: The continuing calibration verification (CCV) associated with batch recovered outside acceptance criteria, low biased, for >. . The associated samples, with passing DRO will be reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

Method SM 4500 Cl- E - Soluble: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 885-45597 and analytical batch 885-45663 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference (high Cl) are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method SM 4500 Cl- E - Soluble: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 885-45601 and analytical batch 885-45823 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

QUESTIONS

Nature and Volume of Release (continued)	
Is this a gas only submission (i.e. only significant Mcf values reported)	No, according to supplied volumes this does not appear to be a "gas only" report.
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	No
Reasons why this would be considered a submission for a notification of a major release	Unavailable.
With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.	

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.

The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	Not answered.

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

nvez	Remediation plan is approved with the following conditions; 1. The variance to eliminate sampling of the top 4 feet below grade for chlorides per Table I of 19.15.29.12D (1b) NMAC is accepted as written within Section 4.3.1 and confirmed with samples collected per Table I of Section 3.0 in this report. 2. Per Section 4.3.2 of this report, variance requested is actually an alternative sampling plan per 19.15.29.12D (1b) NMAC. Sampling plan not to exceed 400 square feet (ft.2) for each five (5) point composite (5pc) from the excavation floor per 19.15.29.12D (1b) NMAC is approved. Sidewall confirmation sample(s) will abide at 200 ft.2 for each 5pc per 19.15.29.12D (1c) NMAC. All other provisions addressed in 19.15.29.12D NMAC remain in effect.	7/17/2026
nvez	3. Prior to backfilling the open excavation per 19.15.29.12D (2) NMAC, Devon Energy (Devon) must collect a minimum of one (1) five point composite sample from the media being used as backfill to verify that it meets non-waste containing, uncontaminated, earthen material with chloride concentrations less than 600 mg/kg as analyzed by EPA Method 300.0, or other test methods approved by the division. 4. Since all releases stayed within the well pad perimeter, reclamation per 19.15.29.13D (1) NMAC is postponed until these areas are no longer reasonably needed for production or subsequent drilling operations. This normally occurs at plugging & abandonment or during a major facility deconstruction. Afterward, the release area(s) must be reclaimed within 90 days. 5. Devon has 90-days (October 15, 2026) to submit to OCD its appropriate or final remediation closure report.	7/17/2026
