1.0 EXECUTIVE SUMMARY

The following Remediation Update Report has been prepared to provide details of the remediation activities completed at the former Denton Gas Plant (Site) since the last submitted Ranger-prepared Remediation Update Report, dated April 1, 2026. The report provides the results of recent assessment and treatment activities, and outlines the next phase of remedial efforts at the Site. Site remediation will continue to be implemented in accordance with the New Mexico Oil Conservation Division (NMOCD)-approved Remediation Plan and subsequent directives.

Since the previous update, the first phase excavation activities have been completed within the planned removal area, resulting in the excavation and placement of approximately 15,000 cubic yards of impacted soil into on-site treatment cells for ex-situ bioremediation. A total of 371 confirmation soil samples were collected from the excavation area base and sidewalls to evaluate cleanup progress and confirm completion to appropriate boundaries. Laboratory results indicate that the majority of the excavated area has achieved the applicable NMAC cleanup criteria; however, several localized areas with elevated total petroleum hydrocarbon (TPH) concentrations remain and will require additional over-excavation and confirmation sampling.

Remediation activities also included excavation of the identified elevated chloride area. Confirmation sampling demonstrated that TPH, BTEX, and chloride concentrations within the excavation met the applicable regulatory criteria, indicating that the impacts have been successfully addressed in this portion of the Site.

Two areas containing active facility infrastructure were identified where additional excavation cannot be safely completed without significant disruption to ongoing operations. Confirmation sampling has been completed around these locations to document existing conditions, and formal deferral of remediation requests are being submitted for these areas. In addition, several historic concrete equipment foundations were encountered during excavation. As these locations contain no remaining soil and surrounding confirmation samples demonstrate regulatory compliance, an exemption from additional removal and sampling is requested.

Treatment of excavated soil within the on-site bioremediation cells has continued using the NMOCD-approved Piranha® treatment product. Field monitoring and laboratory assessment indicate that material within the northern treatment cell has likely achieved the applicable cleanup criteria and is expected to proceed to confirmation sampling prior to reuse as backfill. Material within the southern treatment cell continues to exhibit elevated TPH concentrations and will remain under treatment and monitoring until cleanup objectives are achieved.

Upcoming remedial activities will include targeted over-excavation of remaining impacted soils, confirmation sampling of the northern treatment cell, continued monitoring and treatment of the southern treatment cell, backfilling with treated material meeting regulatory criteria, and initiation of the next phase of excavation and treatment activities. Because these activities will extend beyond the current regulatory schedule, DGP respectfully requests a 90-day extension to complete the remaining remedial work and submit the next remediation status update report.

2.0 SITE LOCATION AND BACKGROUND

The Site is a former natural gas processing plant/facility historically operated by Davis Gas Processing (DGP). The site is currently used as a natural gas compression facility with above ground condensate storage. The Site is located on private land owned by DGP, approximately 13 miles northeast of Lovington within Lea County, New Mexico. The facility is situated in Unit NWSE, Section 2, Township 15S Range 37E, at approximate GPS coordinates 33.044544, -103.169415.

On November 7, 2020, an accidental tank overfill incident occurred at the subject site. During site operations, a valve was inadvertently left open, resulting in the overfilling of the tank and release of approximately nine barrels (bbls) of a condensate and produced water mixture. The released fluids were contained within the earthen secondary containment berm surrounding the subject tank. Upon discovery, immediate action was taken to stop the release of fluids from the tank. Emergency vacuum trucks were dispatched to the Site and successfully recovered approximately eight barrels of released fluids.

During the initial response efforts, DGP representatives completed initial assessments in the impacted areas, including collecting soil samples for laboratory analysis. DGP then retained Ranger Environmental Services, LLC (Ranger) to assist in the assessment and remediation activities associated with the November 7, 2020 incident. The incident was reported to the New Mexico Oil Conservation Division (NMOCD). An Initial C-141 Form was approved by the NMOCD on December 2, 2020, and an Incident Number (NRM2033752202) was issued.

From 2020 to 2025, numerous site assessment events were completed to evaluate the conditions at the Site and define the extent of elevated soil concentrations. In June 2025, Ranger prepared a *Proposed Remediation Plan*, which proposed in-situ bioremediation, that was submitted to the NMOCD. The plan requested a variance to allow for the utilization of the Table 1 19.15.29.12 NMAC (groundwater 51'-100' feet) criteria, and presented that, due to the presence of underground utilities, several areas of deferral or remediation requests would be necessary. On August 7, 2025, the NMOCD responded denying of the proposed remedial strategy. The NMOCD response, however, did include the approval of the variance request to utilize the Table 1 19.15.29.12 NMAC (groundwater 51'-100' feet) criteria.

In response to the NMOCD denial, Ranger prepared an alternate *Proposed Remediation Plan*, dated November 4, 2025 (*Remediation Plan*), which was submitted to the NMOCD. The alternative plan proposed a remedial strategy to address the impacted soils using ex-situ bioremediation techniques. Additionally, the plan revisited some of the numerous underground utilities in the remediation area, the likely need for referral of remediation requests in various areas, and requested a variance to the project timeline as remedial operations will exceed the 90-day timeline outlined in NMAC 19.15.29.

On January 6, 2026, the NMOCD approved the Remediation Plan with conditions directing that Piranha be the primary bioremediation product utilized at the Site. The NMOCD directed an

original completion date of April 6, 2026; however, the approval also indicated that if remedial operations were ongoing, an extension request would be necessary. By early April 2026, remedial operations at the Site were ongoing, and as such, a Ranger-prepared Remediation Update Report, dated April 1, 2026 (*April 2026 Remediation Update Report*), was submitted to the NMSLO. The report provided details of the completed and ongoing efforts at the Site and requested an extension to allow for the continuation of operations. A formal extension request email was also sent to Mr. Nelson Velez of the NMOCD. On April 15, 2026, Mr. Velez responded to the extension request and informed DGP that extension requests would not be necessary as long as remediation update reports were submitted as Alternative Remediation Reports (ARR) via the NMOCD online portal. On May 4, 2026, the NMOCD approved the *April 2026 Remediation Update Report*. The approval included directives that an additional ARR or remediation closure report be submitted by August 3, 2026.

The following *Remediation Update Report* summarizes completed activities, provides updates on ongoing remedial activities, and requests a time extension of the current directed August 3, 2026, due date.

A *Topographic Map* and *Area Map* noting the location of the subject Site and surrounding areas are attached. Additionally, figures illustrating the site features, sampling locations, and current remediation areas are also attached.

3.0 SITE REMEDIATION UPDATE

3.1 Phase I Soil Removal Operations and Confirmation Sampling

As detailed in the *June 2026 Remediation Update Report*, remedial soil removal operations were initiated in March 2026. The initial phase of operations included approximately 15,000 cubic yards of material that has been excavated and transported to the constructed treatment cells for treatment. Due to the presence of numerous underground lines, the removal operations progressed at a slower rate than anticipated. By May 2026, the first phase of removal operations was completed to the target boundaries, and all material had been transported to the treatment cells for product application.

During the excavation process, multiple confirmation soil sampling events were conducted in accordance with the approved *Remediation Plan*. All confirmation soil samples were collected in accordance with NMAC 19.15.29.12, with each cleanup confirmation soil sample collected as a five-part composite sample representing less than 200 square feet. The confirmation soil samples were collected from various locations along the base of the excavated area and excavation side walls. To date, a total of 371 confirmation soil samples have been collected from the excavated area.

The confirmation sampling process also included samples collected from areas immediately adjacent to locations where active lines and equipment are present. The areas are intended for a request for deferral of remediation, with soil sampling completed to document conditions in these areas. An area in the vicinity of the active facility flare is located in the northern portion of the currently excavated area. An additional area, located along the southern extent of the currently excavated area, is noted to contain active lines and compressors associated with the active on-site operations. During the excavation process, multiple areas of historic cement bases/supports were also encountered in the excavation area. Due to the presence of the concrete, no soil is present in the areas; as such, these areas are not available for sampling. The

location and extent of the observed deferral request areas and observed cement areas are presented in the attached figures. Additional details regarding the areas are included below.

Upon collection, all confirmation soil samples were submitted to Cardinal Laboratories in Hobbs, New Mexico for analysis of TPH using Environmental Protection Agency (EPA) Method 8015; benzene, toluene, ethylbenzene, and total xylenes (BTEX) using EPA Method 8021; and total chloride using Method SM 4500. The samples were collected and managed using standard QA/QC and chain-of-custody procedures.

The laboratory analytical results for the cleanup confirmation soil samples indicate that a majority of the excavation base samples are in attainment of the approved NMAC 19.15.29.12 Table 1 Criteria. However, multiple samples collected from the excavation base areas and excavation side walls have been documented to have TPH concentrations in applicable NMAC 19.15.29.12 Table 1 and/or NMAC 19.15.29.13 Restoration, Reclamation, and Re-Vegetation Criteria. The chloride concentrations of all samples collected from the excavated area have been documented to be within both the NMAC 19.15.29.12 Table 1 and NMAC 19.15.29.13 Restoration, Reclamation, and Re-Vegetation Criteria.

During the remediation process, several locations of elevated soil concentrations were over-excavated, and additional confirmation samples were collected from the areas in accordance with NMAC 19.15.29.12. While partially successful, several locations once again exhibited elevated soil TPH concentrations and will require additional remedial operations. Additional removal operations will also be needed in areas that have not yet undergone additional removal operations. Current plans for further removal operations are detailed below.

Figures depicting the boundaries of the current excavation area and the confirmation sampling locations are included in the Figures section of this report. A summary table of the confirmation sampling results is included in the Tables section of this report. Copies of the laboratory analytical reports, including chain-of-custody documentation, are attached.

3.2 Deferral of Remediation Request

As detailed above, two deferral request locations were identified during the first phase of remedial soil removal operations. Based on the nature of the active operational equipment in the areas, completing remedial soil removal operations would require significant facility deconstruction. As such DGP respectfully requests these areas be considered for deferral of remediation. The documented areas are presented on the site maps included in the Figures section of this report.

In the northern portion of the facility, a flare servicing Site operations is present. Currently, soil removal has been completed surrounding the flare location to the extent safely possible. To evaluate the area conditions, three excavation wall samples (sample IDs W-20, W-21, and W-22) were collected from the excavation wall extent surrounding the area. The samples were collected as detailed above, and in accordance with NMAC 19.15.29.12. Upon review of the laboratory analytical results, all three samples were documented to have TPH (GRO+DRO+MRO) concentrations elevated beyond the target NMAC 19.15.29.13 Restoration, Reclamation, and Re-Vegetation Criteria. All three samples were documented to have BTEX and chloride concentrations within the NMAC 19.15.29.13 Restoration, Reclamation, and Re-Vegetation Criteria. As documentation of the area has been completed and the extent and nature of elevated concentrations in the area have been confirmed, DGP respectfully requests approval of a deferral of remediation for this area.

The second identified area is located in the southern portion of the currently excavated area. The location contains various active above- and below-ground lines, active compressors, and various other production equipment that pose a significant safety hazard and facility deconstruction. Currently, excavation has been completed to the northernmost extent of the area, and full determination of the area to be included in the deferral of remediation request is pending. During the confirmation sampling process, two soil samples (sample IDs DF-W1 and DF-W2) were collected from the northern extent of the area towards the excavated areas. Upon review of the laboratory analytical results, the two samples were noted to have limited impacts, with sample DF-W1 having TPH, BTEX, and chloride results below the applicable NMAC 19.15.29.13 Restoration, Reclamation, and Re-Vegetation Criteria. Sample DF-W2 was noted to have a TPH (GRO+DRO+MRO) concentration of 110.9 mg/Kg, minimally above the target 100 mg/Kg concentration, and BTEX and TPH concentrations within the NMAC 19.15.29.13 Restoration, Reclamation, and Re-Vegetation Criteria. While full determination of the area of deferral is needed prior to a request, the anticipated area is presented in the attached figures.

As referenced above, during the completion of soil removal operations, three locations of remnant concrete associated with historic equipment base supports were encountered. Due to the presence of concrete in the area, no soil is available, and confirmation soil samples could not be collected from the areas. Confirmation soil samples collected from the areas surrounding the subject locations document that the areas have been brought into attainment with the applicable NMAC 19.15.29 Table 1 Criteria and/or NMAC 19.15.29.13 Restoration, Reclamation, and Re-Vegetation Criteria. Additionally, the cement is noted to be present below the native ground level of the area, and it does not appear that the areas will adversely affect future reclamation activities. As the surrounding areas have been confirmed to be adequately addressed, and the remnant cement does not appear to be a risk to reclamation, DGP respectfully requests that the areas be allowed for exemption from removal and sampling.

3.3 Elevated Soil Chloride Area Removal and Confirmation Sampling

As detailed in the approved remediation plan, areas of elevated soil chloride concentrations have been identified at the Site. To address these areas, excavation of the material with transportation to disposal is the target remediation method. Upon completion of the first phase of removal and treatment operations, remedial operations were shifted to a documented area of elevated soil chloride concentrations in the eastern extent of the anticipated remediation area.

Upon completion, the excavated area was approximately 74 feet by 82 feet and was completed to a depth of approximately four feet bgs. To evaluate the excavated areas, confirmation soil samples were collected in accordance with the approved *Remediation Plan*. All confirmation soil samples were collected in accordance with NMAC 19.15.29.12, with each cleanup confirmation soil sample collected as a five-part composite sample representing less than 200 square feet. As further remediation to address elevated soil TPH concentrations surrounding the subject area is anticipated, the confirmation sampling primarily targeted the excavation base. The eastern and southeastern boundaries of the area align with the expected remediation extent; to evaluate this area, a confirmation sample was taken from the sidewall of the excavation area. In total, 29 soil confirmation soil samples were collected from the area for laboratory analysis.

Upon collection, all confirmation soil samples were submitted to Cardinal Laboratories in Hobbs, New Mexico for analysis of TPH, BTEX, and chloride using the aforementioned laboratory methods. The samples were collected and managed using standard QA/QC and chain-of-custody procedures.

Upon review of the laboratory analytical results for the samples collected from the area, all samples were documented to have TPH, BTEX, and chloride concentrations within the target NMAC 19.15.29.12 Table 1 Criteria. Additionally, the sample collected from the excavation eastern/southeastern extent was documented to have concentrations within the applicable NMAC 19.15.29.13 Restoration, Reclamation, and Re-Vegetation Criteria.

During the remediation process, field chloride titration and organic vapor monitor (OVM) readings were collected from the walls of the excavation area in directions where additional remediation is anticipated to be necessary. While field OVM readings and observations indicate that the areas are needed to address TPH concentrations, the collected field chloride titrations indicate that the area has addressed the elevated chloride concentrations in the area. As such, the remaining areas to the west, northwest, and southwest appear to be adequate for the continuation of hydrocarbon treatment operations at the Site.

The extent of the excavation and the location of the collected confirmation soil samples are depicted in the attached Confirmation Sample Location Map (North), included in the Figures section.

All material generated during the removal process in the subject area was transported to disposal at the Lea Land disposal facility in Eddy County, New Mexico.

3.4 Impact Material Treatment and Monitoring Events

The excavated material included in the first phase of the removal operation was staged in the two constructed on-site treatment cells. Placement of material was first completed in the northern treatment cell and then the southern treatment cell. The material was staged in a single approximate 18-inch lift for treatment and management. During the placement process, the material was thoroughly agitated to ensure all material was exposed to the treatment product and to promote natural attenuation.

After the placement of material within the treatment cells, in April and May 2026, the approved treatment product, Piranha®, was applied in multiple application events. Due to high winds in the area, treatment application was delayed on several occasions to limit the loss of product and ensure as much direct application of the product as possible. Upon application, the soil/product mixture was once again mixed and then hydrated to the manufacturer's recommended moisture content.

In order to evaluate the condition of the treated material, periodic assessment was completed by on-site DPG representatives and Ranger personnel. Inspections completed by DPG personnel included assessing the treatment material for moisture content to assist in developing an adequate schedule for tilling and hydration operations. During the treatment process, periodic tilling and water application are being completed as necessary. During the initial weeks of the treatment process, rainfall in the area assisted in natural hydration of the treatment material.

Assessment completed by Ranger personnel included assessing soil moisture content using a hand-held moisture probe and collecting OVM readings from the material for baseline assessment. In July 2026, Ranger personnel completed a comprehensive assessment of the treatment material in both cells, as detailed above. During the process, field OVM readings indicated an overall reduction in hydrocarbon concentrations in comparison to conditions observed during the assessment process. Additionally, with the exception of limited cells, the observed moisture content was documented to be at or above the target levels.

3.5 Treatment Cell Material Assessment Sampling

In order to further review the condition of the material undergoing treatment and monitor the success of the treatment process, on July 15, 2026, Ranger personnel collected six samples from the treatment cells for laboratory analysis. Four of the samples were collected from the northern treatment cell, and two samples were collected from the southern treatment cell.

The samples were collected in accordance with the manner presented in the NMOCD-approved *Remediation Plan*, as five-part composite sample representative of 50 cubic yards of material. The composite sample parts were collected from various locations and depths within the treatment cell to ensure full representation of the sample area in the composite sample. Upon collection, the soil samples were submitted to Cardinal Laboratories in Hobbs, New Mexico for analysis of TPH, BTEX, and chloride using the aforementioned laboratory methods.

Upon review of the laboratory analytical results, the four samples collected from the northern treatment cell were documented to have BTEX, TPH, and chloride concentrations within the NMAC 19.15.29.13 Restoration, Reclamation, and Re-Vegetation Criteria. The two samples collected from the southern treatment cell were documented to have BTEX and chloride concentrations within the NMAC 19.15.29.13 Restoration, Reclamation, and Re-Vegetation Criteria; however, TPH concentrations of the two samples were noted to be elevated beyond the target TPH concentration of 100 mg/Kg.

Based on the sample results, it appears that the material within the northern treatment cell is potentially in attainment of target concentrations and adequate for re-use as backfill at the Site. However, prior to use as backfill, the material will undergo full confirmation sampling as presented in the NMOCD-approved *Remediation Plan*, and as detailed below.

Due to the documented elevated TPH concentrations, the material within the southern treatment cell will undergo further management and monitoring as detailed below. At this time it does not appear that additional product application is necessary; however, if additional reductions in concentrations are not believed to be occurring, an additional Piranha® application will be completed.

4.0 UPCOMING REMEDIAL ACTIVITIES

4.1 Over-Excavation and Confirmation Sampling

To address the documented elevated soil TPH concentrations in the excavation base and sidewalls, additional removal operations will be completed in the identified areas. Upon completion of the removal process, additional confirmation soil samples will be collected in accordance with NMAC 19.15.29.12, with each cleanup confirmation soil sample collected as a five-part composite sample representing less than 200 square feet.

Upon collection, the samples will be submitted to an NMOCD-approved laboratory for analysis of TPH, BTEX, and chloride using NMOCD-approved laboratory methods. The over-excavation and sampling process will be completed until laboratory analytical results from the collected confirmation samples document that the areas have been completed to boundaries with the

applicable NMAC 19.15.29.12 Table 1 and NMAC 19.15.29.13 Restoration, Reclamation, and Re-Vegetation Criteria.

4.2 Treatment Cell Confirmation Sampling and Continuation of Monitoring

As the assessment samples collected from the northern treatment cell indicate that soil concentrations are potentially within the target concentrations, confirmation sampling as detailed in the approved *Remediation Plan* will commence. The confirmation samples for laboratory analysis will be collected at a rate of one five-part composite sample per 50 cubic yards of material. The composite sample parts will be collected from various locations and depths within the treatment cell to ensure full representation of the sample area in the composite sample.

All soil samples designated for laboratory analysis will be collected using standard QA/QC procedures, placed into new, laboratory-supplied containers, and will be immediately placed into a sample shuttle containing ice and secured with custody seals. The samples will be transported to an approved laboratory for analysis of TPH, BTEX, and total chloride using NMOCD-approved laboratory methodologies.

The laboratory results for the southern cell indicate that elevated TPH concentrations are still present and that additional time for treatment is necessary. Monitoring will continue until field readings and observations indicate that soil concentrations have been reduced to an appropriate level. At which time, as it appears that no further management/treatment is required, soil samples for laboratory analysis will be completed.

4.3 Backfill Operations

Upon confirmation that the treated soil/material has achieved concentrations at or below the target regulatory criteria, the treated soil/material will be removed from the treatment cell and staged for utilization as Site backfill.

4.4 Phase II Removal Operations

After removal from the treatment cells and replacement into an excavated area, the next phase of excavation and treatment will be initiated. Prior to initiation of placement of material into the treatment cells, an inspection of each treatment cell will be completed to ensure the integrity of the cell liner, containment berm, and overall treatment cell integrity. Any necessary repairs or improvements to the cell will be completed prior to additional material being placed into the cell.

The continuation of removal, confirmation sampling, and treatment will be completed in the manner presented in the NMOCD-approved *Remediation Plan*, and as detailed above.

5.0 UPDATED PROJECT TIMELINE & EXTENSION REQUEST

As detailed above, the next remedial actions will include the over-excavation of areas exhibiting elevated TPH concentrations and the confirmation sampling of material within the northern treatment cell. It is anticipated that these actions will be initiated in August 2026.

As previously detailed, based on the nature of the remediation strategy, the upcoming actions will once again exceed the NMOCD 90-day remediation completion timeline as outlined in NMAC 19.15.29. Due to the necessary project timelines for the proposed remedial strategy, DPG

respectfully requests a 90-day extension for remedial operations and a subsequent status update report.

In approximately 90 days, an additional Remediation Status Update Report will be prepared, as presented in the *Remediation Plan*. The report will include additional details of the over-excavation activities, treatment cell confirmation sampling and monitoring activities, backfill operations, and initiation of the second phase of removal and treatment operations. The update report will also include an updated project timeline.

19.15.29.12 NMAC Table 1 Closure Criteria for Soils Impacted by a Release (GW 51'-100')													
			10	---	---	---	50	---	---	---	1,000	2,500	10,000
19.15.29.13 NMAC Reclamation Criteria (0'-4' Soils Only)			10³	---	---	---	50³	---	---	---	---	100³	600

Notes:

- Results exceeding the Table 1 Closure Criteria are presented in bold type and are highlighted yellow.
- Results exceeding the NMAC Restoration, Reclamation and re-vegetation chloride concentration requirements are presented in bold red type.
- Value derived from the State of New Mexico Energy, Minerals and Natural Resources Department document Procedures for the Implementation of Digital C-141 and the release rule (19.15.29 NMAC) dated December 1, 2023.
- Any result presented with a strikethrough means that cleanup confirmation soil sample was found to exceed the approved site closure criteria and as such that area was subsequently over-excavated and resampled.

Notes:

1. All assessment samples detailed above were collected as five-part composite samples from varying locations and depths within the associated assessment area.

ATTACHMENT 1 – SITE PHOTOGRAPHS

PHOTOGRAPH NO. 1 – A general view of the northern portion of the remediation area. The view is towards the northeast.

PHOTOGRAPH NO. 2 – A view of the southern portion of the excavation area. The anticipated area of deferral request can be seen on the right-hand side of the photograph.

PHOTOGRAPH NO. 3 – A view of the flare area where deferral of remediation is requested. The view is towards the north

PHOTOGRAPH NO. 4 – An area of remnant cement with no soil available for sampling. DGP requests that these areas be exempt from the sampling process. The view is towards the northwest.

PHOTOGRAPH NO. 5 – An additional view of the flare area and adjacent remnant cement area. The view is towards the southeast.

PHOTOGRAPH NO. 6 – An additional view of the remediation area during the confirmation sampling process.

PHOTOGRAPH NO. 7 – An additional view of the remediation area. The view is towards the south.

PHOTOGRAPH NO. 8 – An additional view of the anticipated area to be included in the deferral of the remediation request. The area is along the southern extent of the current excavation area.

PHOTOGRAPH NO. 9 – A view of the elevated chloride concentration excavation area upon completion of the removal operations in the area.

PHOTOGRAPH NO. 10 – An additional view of the elevated chloride concentration excavation area upon completion of the removal operations in the area.

PHOTOGRAPH NO. 11 – A recent view of material within the northern treatment cell undergoing bioremediation.

PHOTOGRAPH NO. 12 – A recent view of material within the southern treatment cell undergoing bioremediation.

RE: DENTON GAS PLANT

Enclosed are the results of analyses for samples received by the laboratory on 03/27/26 17:04.

Cardinal Laboratories is accredited through Texas NELAP under certificate number TX-C25-00101. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Celey D. Keene". The signature is written in a cursive, flowing style.

Celey D. Keene

RE: DENTON GAS PLANT

Enclosed are the results of analyses for samples received by the laboratory on 04/13/26 16:18.

Cardinal Laboratories is accredited through Texas NELAP under certificate number TX-C25-00101. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Celey D. Keene". The signature is written in a cursive style with a large, stylized 'C' at the beginning.

Celey D. Keene

Notes and Definitions

QM-07	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
BS-3	Blank spike recovery outside of lab established statistical limits, but still within method limits. Data is not adversely affected.
ND	Analyte NOT DETECTED at or above the reporting limit
RPD	Relative Percent Difference
**	Samples not received at proper temperature of 6°C or below.
***	Insufficient time to reach temperature.
-	Chloride by SM4500Cl-B does not require samples be received at or below 6°C Samples reported on an as received basis (wet) unless otherwise noted on report

RE: DENTON GAS PLANT

Enclosed are the results of analyses for samples received by the laboratory on 04/23/26 8:38.

Cardinal Laboratories is accredited through Texas NELAP under certificate number TX-C25-00101. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Celey D. Keene". The signature is written in a cursive, flowing style.

Celey D. Keene

PLEASE NOTE: Liability and Damages. Cardinal's liability and client's exclusive remedy for any claim arising, whether based in contract or tort, shall be limited to the amount paid by client for analyses. All claims, including those for negligence and any other cause whatsoever shall be deemed waived unless made in writing and received by Cardinal within thirty (30) days after completion of the applicable service. In no event shall Cardinal be liable for incidental or consequential damages, including, without limitation, business interruptions, loss of use, or loss of profits incurred by client, its subsidiaries, affiliates or successors arising out of or related to the performance of the services hereunder by Cardinal, regardless of whether such claim is based upon any of the above stated reasons or otherwise. Results relate only to the samples identified above. This report shall not be reproduced except in full with written approval of Cardinal Laboratories.

Notes and Definitions

QM-07	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
ND	Analyte NOT DETECTED at or above the reporting limit
RPD	Relative Percent Difference
**	Samples not received at proper temperature of 6°C or below.
***	Insufficient time to reach temperature.
-	Chloride by SM4500Cl-B does not require samples be received at or below 6°C Samples reported on an as received basis (wet) unless otherwise noted on report

RE: DENTON GAS PLANT

Enclosed are the results of analyses for samples received by the laboratory on 04/28/26 13:28.

Cardinal Laboratories is accredited through Texas NELAP under certificate number TX-C25-00101. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Celey D. Keene". The signature is written in a cursive style with a large, stylized 'C' and 'K'.

PLEASE NOTE: Liability and Damages. Cardinal's liability and client's exclusive remedy for any claim arising, whether based in contract or tort, shall be limited to the amount paid by client for analyses. All claims, including those for negligence and any other cause whatsoever shall be deemed waived unless made in writing and received by Cardinal within thirty (30) days after completion of the applicable service. In no event shall Cardinal be liable for incidental or consequential damages, including, without limitation, business interruptions, loss of use, or loss of profits incurred by client, its subsidiaries, affiliates or successors arising out of or related to the performance of the services hereunder by Cardinal, regardless of whether such claim is based upon any of the above stated reasons or otherwise. Results relate only to the samples identified above. This report shall not be reproduced except in full with written approval of Cardinal Laboratories.

PLEASE NOTE: Liability and Damages. Cardinal's liability and client's exclusive remedy for any claim arising, whether based in contract or tort, shall be limited to the amount paid by client for analyses. All claims, including those for negligence and any other cause whatsoever shall be deemed waived unless made in writing and received by Cardinal within thirty (30) days after completion of the applicable service. In no event shall Cardinal be liable for incidental or consequential damages, including, without limitation, business interruptions, loss of use, or loss of profits incurred by client, its subsidiaries, affiliates or successors arising out of or related to the performance of the services hereunder by Cardinal, regardless of whether such claim is based upon any of the above stated reasons or otherwise. Results relate only to the samples identified above. This report shall not be reproduced except in full with written approval of Cardinal Laboratories.

Notes and Definitions

S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
QR-04	The RPD for the BS/BSD was outside of historical limits.
QM-07	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
GC-NC	8260 confirmation analysis was performed; initial GC results were not supported by GC/MS analysis and are reported as ND.
BS-3	Blank spike recovery outside of lab established statistical limits, but still within method limits. Data is not adversely affected.
BS1	Blank spike recovery above laboratory acceptance criteria. Results for analyte potentially biased high.
ND	Analyte NOT DETECTED at or above the reporting limit
RPD	Relative Percent Difference
**	Samples not received at proper temperature of 6°C or below.
***	Insufficient time to reach temperature.
-	Chloride by SM4500Cl-B does not require samples be received at or below 6°C Samples reported on an as received basis (wet) unless otherwise noted on report

WILL KIERDORF

RANGER ENVIRONMENTAL SERVICES, INC.

PO BOX 201179

AUSTIN, TX 78729

RE: DENTON GAS PLANT

Enclosed are the results of analyses for samples received by the laboratory on 05/18/26 15:53.

Cardinal Laboratories is accredited through Texas NELAP under certificate number TX-C25-00101. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Celey D. Keene". The signature is written in a cursive style with a large, stylized 'C' and 'K'.

Celey D. Keene

Lab Director/Quality Manager

PLEASE NOTE: Liability and Damages. Cardinal's liability and client's exclusive remedy for any claim arising, whether based in contract or tort, shall be limited to the amount paid by client for analyses. All claims, including those for negligence and any other cause whatsoever shall be deemed waived unless made in writing and received by Cardinal within thirty (30) days after completion of the applicable service. In no event shall Cardinal be liable for incidental or consequential damages, including, without limitation, business interruptions, loss of use, or loss of profits incurred by client, its subsidiaries, affiliates or successors arising out of or related to the performance of the services hereunder by Cardinal, regardless of whether such claim is based upon any of the above stated reasons or otherwise. Results relate only to the samples identified above. This report shall not be reproduced except in full with written approval of Cardinal Laboratories.

PLEASE NOTE: Liability and Damages. Cardinal's liability and client's exclusive remedy for any claim arising, whether based in contract or tort, shall be limited to the amount paid by client for analyses. All claims, including those for negligence and any other cause whatsoever shall be deemed waived unless made in writing and received by Cardinal within thirty (30) days after completion of the applicable service. In no event shall Cardinal be liable for incidental or consequential damages, including, without limitation, business interruptions, loss of use, or loss of profits incurred by client, its subsidiaries, affiliates or successors arising out of or related to the performance of the services hereunder by Cardinal, regardless of whether such claim is based upon any of the above stated reasons or otherwise. Results relate only to the samples identified above. This report shall not be reproduced except in full with written approval of Cardinal Laboratories.

PLEASE NOTE: Liability and Damages. Cardinal's liability and client's exclusive remedy for any claim arising, whether based in contract or tort, shall be limited to the amount paid by client for analyses. All claims, including those for negligence and any other cause whatsoever shall be deemed waived unless made in writing and received by Cardinal within thirty (30) days after completion of the applicable service. In no event shall Cardinal be liable for incidental or consequential damages, including, without limitation, business interruptions, loss of use, or loss of profits incurred by client, its subsidiaries, affiliates or successors arising out of or related to the performance of the services hereunder by Cardinal, regardless of whether such claim is based upon any of the above stated reasons or otherwise. Results relate only to the samples identified above. This report shall not be reproduced except in full with written approval of Cardinal Laboratories.

PLEASE NOTE: Liability and Damages. Cardinal's liability and client's exclusive remedy for any claim arising, whether based in contract or tort, shall be limited to the amount paid by client for analyses. All claims, including those for negligence and any other cause whatsoever shall be deemed waived unless made in writing and received by Cardinal within thirty (30) days after completion of the applicable service. In no event shall Cardinal be liable for incidental or consequential damages, including, without limitation, business interruptions, loss of use, or loss of profits incurred by client, its subsidiaries, affiliates or successors arising out of or related to the performance of the services hereunder by Cardinal, regardless of whether such claim is based upon any of the above stated reasons or otherwise. Results relate only to the samples identified above. This report shall not be reproduced except in full with written approval of Cardinal Laboratories.

Notes and Definitions

QR-03	The RPD value for the sample duplicate or MS/MSD was outside of QC acceptance limits due to matrix interference. QC batch accepted based on LCS and/or LCSD recovery and/or RPD values.
ND	Analyte NOT DETECTED at or above the reporting limit
RPD	Relative Percent Difference
**	Samples not received at proper temperature of 6°C or below.
***	Insufficient time to reach temperature.
-	Chloride by SM4500Cl-B does not require samples be received at or below 6°C Samples reported on an as received basis (wet) unless otherwise noted on report

RE: DENTON GAS PLANT

Enclosed are the results of analyses for samples received by the laboratory on 05/20/26 16:24.

Cardinal Laboratories is accredited through Texas NELAP under certificate number TX-C25-00101. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Celey D. Keene". The signature is written in a cursive, flowing style.

Celey D. Keene

PLEASE NOTE: Liability and Damages. Cardinal's liability and client's exclusive remedy for any claim arising, whether based in contract or tort, shall be limited to the amount paid by client for analyses. All claims, including those for negligence and any other cause whatsoever shall be deemed waived unless made in writing and received by Cardinal within thirty (30) days after completion of the applicable service. In no event shall Cardinal be liable for incidental or consequential damages, including, without limitation, business interruptions, loss of use, or loss of profits incurred by client, its subsidiaries, affiliates or successors arising out of or related to the performance of the services hereunder by Cardinal, regardless of whether such claim is based upon any of the above stated reasons or otherwise. Results relate only to the samples identified above. This report shall not be reproduced except in full with written approval of Cardinal Laboratories.

PLEASE NOTE: Liability and Damages. Cardinal's liability and client's exclusive remedy for any claim arising, whether based in contract or tort, shall be limited to the amount paid by client for analyses. All claims, including those for negligence and any other cause whatsoever shall be deemed waived unless made in writing and received by Cardinal within thirty (30) days after completion of the applicable service. In no event shall Cardinal be liable for incidental or consequential damages, including, without limitation, business interruptions, loss of use, or loss of profits incurred by client, its subsidiaries, affiliates or successors arising out of or related to the performance of the services hereunder by Cardinal, regardless of whether such claim is based upon any of the above stated reasons or otherwise. Results relate only to the samples identified above. This report shall not be reproduced except in full with written approval of Cardinal Laboratories.

PLEASE NOTE: Liability and Damages. Cardinal's liability and client's exclusive remedy for any claim arising, whether based in contract or tort, shall be limited to the amount paid by client for analyses. All claims, including those for negligence and any other cause whatsoever shall be deemed waived unless made in writing and received by Cardinal within thirty (30) days after completion of the applicable service. In no event shall Cardinal be liable for incidental or consequential damages, including, without limitation, business interruptions, loss of use, or loss of profits incurred by client, its subsidiaries, affiliates or successors arising out of or related to the performance of the services hereunder by Cardinal, regardless of whether such claim is based upon any of the above stated reasons or otherwise. Results relate only to the samples identified above. This report shall not be reproduced except in full with written approval of Cardinal Laboratories.

Celey D. Keene, Lab Director/Quality Manager

Notes and Definitions

S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
QM-07	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
ND	Analyte NOT DETECTED at or above the reporting limit
RPD	Relative Percent Difference
**	Samples not received at proper temperature of 6°C or below.
***	Insufficient time to reach temperature.
-	Chloride by SM4500Cl-B does not require samples be received at or below 6°C Samples reported on an as received basis (wet) unless otherwise noted on report

RE: DENTON GAS PLANT

Enclosed are the results of analyses for samples received by the laboratory on 05/29/26 15:48.

Cardinal Laboratories is accredited through Texas NELAP under certificate number TX-C26-00106. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Celey D. Keene". The signature is written in a cursive, flowing style.

Celey D. Keene

PLEASE NOTE: Liability and Damages. Cardinal's liability and client's exclusive remedy for any claim arising, whether based in contract or tort, shall be limited to the amount paid by client for analyses. All claims, including those for negligence and any other cause whatsoever shall be deemed waived unless made in writing and received by Cardinal within thirty (30) days after completion of the applicable service. In no event shall Cardinal be liable for incidental or consequential damages, including, without limitation, business interruptions, loss of use, or loss of profits incurred by client, its subsidiaries, affiliates or successors arising out of or related to the performance of the services hereunder by Cardinal, regardless of whether such claim is based upon any of the above stated reasons or otherwise. Results relate only to the samples identified above. This report shall not be reproduced except in full with written approval of Cardinal Laboratories.

PLEASE NOTE: Liability and Damages. Cardinal's liability and client's exclusive remedy for any claim arising, whether based in contract or tort, shall be limited to the amount paid by client for analyses. All claims, including those for negligence and any other cause whatsoever shall be deemed waived unless made in writing and received by Cardinal within thirty (30) days after completion of the applicable service. In no event shall Cardinal be liable for incidental or consequential damages, including, without limitation, business interruptions, loss of use, or loss of profits incurred by client, its subsidiaries, affiliates or successors arising out of or related to the performance of the services hereunder by Cardinal, regardless of whether such claim is based upon any of the above stated reasons or otherwise. Results relate only to the samples identified above. This report shall not be reproduced except in full with written approval of Cardinal Laboratories.

PLEASE NOTE: Liability and Damages. Cardinal's liability and client's exclusive remedy for any claim arising, whether based in contract or tort, shall be limited to the amount paid by client for analyses. All claims, including those for negligence and any other cause whatsoever shall be deemed waived unless made in writing and received by Cardinal within thirty (30) days after completion of the applicable service. In no event shall Cardinal be liable for incidental or consequential damages, including, without limitation, business interruptions, loss of use, or loss of profits incurred by client, its subsidiaries, affiliates or successors arising out of or related to the performance of the services hereunder by Cardinal, regardless of whether such claim is based upon any of the above stated reasons or otherwise. Results relate only to the samples identified above. This report shall not be reproduced except in full with written approval of Cardinal Laboratories.

RE: DENTON GAS PLANT

Enclosed are the results of analyses for samples received by the laboratory on 06/03/26 14:52.

Cardinal Laboratories is accredited through Texas NELAP under certificate number TX-C26-00106. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Celey D. Keene". The signature is written in a cursive style with a large, stylized 'C' and 'K'.

Celey D. Keene

PLEASE NOTE: Liability and Damages. Cardinal's liability and client's exclusive remedy for any claim arising, whether based in contract or tort, shall be limited to the amount paid by client for analyses. All claims, including those for negligence and any other cause whatsoever shall be deemed waived unless made in writing and received by Cardinal within thirty (30) days after completion of the applicable service. In no event shall Cardinal be liable for incidental or consequential damages, including, without limitation, business interruptions, loss of use, or loss of profits incurred by client, its subsidiaries, affiliates or successors arising out of or related to the performance of the services hereunder by Cardinal, regardless of whether such claim is based upon any of the above stated reasons or otherwise. Results relate only to the samples identified above. This report shall not be reproduced except in full with written approval of Cardinal Laboratories.

PLEASE NOTE: Liability and Damages. Cardinal's liability and client's exclusive remedy for any claim arising, whether based in contract or tort, shall be limited to the amount paid by client for analyses. All claims, including those for negligence and any other cause whatsoever shall be deemed waived unless made in writing and received by Cardinal within thirty (30) days after completion of the applicable service. In no event shall Cardinal be liable for incidental or consequential damages, including, without limitation, business interruptions, loss of use, or loss of profits incurred by client, its subsidiaries, affiliates or successors arising out of or related to the performance of the services hereunder by Cardinal, regardless of whether such claim is based upon any of the above stated reasons or otherwise. Results relate only to the samples identified above. This report shall not be reproduced except in full with written approval of Cardinal Laboratories.

Notes and Definitions

QR-03	The RPD value for the sample duplicate or MS/MSD was outside of QC acceptance limits due to matrix interference. QC batch accepted based on LCS and/or LCSD recovery and/or RPD values.
ND	Analyte NOT DETECTED at or above the reporting limit
RPD	Relative Percent Difference
**	Samples not received at proper temperature of 6°C or below.
***	Insufficient time to reach temperature.
-	Chloride by SM4500Cl-B does not require samples be received at or below 6°C Samples reported on an as received basis (wet) unless otherwise noted on report

RE: DENTON GAS PLANT

Enclosed are the results of analyses for samples received by the laboratory on 07/02/26 11:56.

Cardinal Laboratories is accredited through Texas NELAP under certificate number TX-C26-00106. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Celey D. Keene". The signature is written in a cursive style with a large, stylized 'C' and 'K'.

Celey D. Keene

Notes and Definitions

QR-03	The RPD value for the sample duplicate or MS/MSD was outside of QC acceptance limits due to matrix interference. QC batch accepted based on LCS and/or LCSD recovery and/or RPD values.
QM-07	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
ND	Analyte NOT DETECTED at or above the reporting limit
RPD	Relative Percent Difference
**	Samples not received at proper temperature of 6°C or below.
***	Insufficient time to reach temperature.
-	Chloride by SM4500Cl-B does not require samples be received at or below 6°C Samples reported on an as received basis (wet) unless otherwise noted on report

RE: DENTON GAS PLANT

Enclosed are the results of analyses for samples received by the laboratory on 07/15/26 16:47.

Cardinal Laboratories is accredited through Texas NELAP under certificate number TX-C26-00106. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Celey D. Keene". The signature is written in a cursive, flowing style.

Celey D. Keene

Notes and Definitions

QM-07	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
ND	Analyte NOT DETECTED at or above the reporting limit
RPD	Relative Percent Difference
**	Samples not received at proper temperature of 6°C or below.
***	Insufficient time to reach temperature.
-	Chloride by SM4500Cl-B does not require samples be received at or below 6°C Samples reported on an as received basis (wet) unless otherwise noted on report

To: Heidi Stone <hstone@wtginc.net>

Subject: The Oil Conservation Division (OCD) has approved the application, Application ID: 523247

To whom it may concern (c/o Heidi Stone for DAVIS GAS PROCESSING CO),

The OCD has approved the submitted *Application for administrative approval of a release notification and corrective action (C-141)*, for incident ID (n#) nRM2033752202, with the following conditions:

- Remediation plan is approved with the following conditions; 1. Ex-situ bioremediation is approved utilizing Piranha® product. Any other ex-situ bioremediation product must be pre-approved by OCD prior to its implementation. 2. If status update is performed, use the Alternative Remediation Report portal to submit to OCD. 3. Davis Gas Processing Co. (Davis) has 90-days (April 6, 2026) to submit to OCD its appropriate or final remediation closure report. If remedial activities are currently ongoing, Davis must request a time extension to complete such activities. Any time extension request must be submitted to OCD prior to its expiration date.

The signed C-141 can be found in the OCD Online: Imaging under the incident ID (n#).

If you have any questions regarding this application, please contact me.

Mr. Velez,

On are about 4/6/26 Davis Gas Processing, Inc. submitted an update on the remediation plan (NMOCD Incident #NRM2033752202) and as a part of the update is a Formal Request for an extension. The remediation is well underway but due to extenuating circumstances, the remediation process is still ongoing. Significant soil removal has been completed and soil treatment is scheduled this month.

I just wanted to confirm our progress to you and our commitment to the project. I look forward to hearing from you.

Cc: Will Kierdorf <will@rangerenv.com>, "Bratcher, Michael, EMNRD" <mike.bratcher@emnrd.nm.gov>

Good morning Alan,

Thank you for the correspondence.

There's no need to request a time extension based on one of the conditions of approval of the remediation plan which states, "2. If status update is performed, use the Alternative Remediation Report (**ARR**) portal to submit to OCD". Since Davis Gas Processing Co. consultant has done so (submitted on 4/2/2026), I'll review the file (based on my queue list on when recieved) and determine when or if another ARR is warranted. Lastly, afterward I'll give an update on the due date, usually 90-days from when I render my decision.

If you have any further questions or concerns, please contact me at your convenience.

Have a safe and productive day!

Regards,

Nelson Velez • Senior Environmental Scientist

To: Heidi Stone <hstone@wtginc.net>
Subject: The Oil Conservation Division (OCD) has accepted the application, Application ID: 566102

To whom it may concern (c/o Heidi Stone for DAVIS GAS PROCESSING CO),

The OCD has received the submitted *Notification for (Final) Sampling of a Release* (C-141N), for incident ID (n#) nRM2033752202.

The sampling event is expected to take place:

When: 03/27/2026 @ 08:00

Where: J-02-15S-37E 0 FNL 0 FEL (33.044544,-103.169415)

Additional Information: W. Kierdorf 512-289-3272

Additional Instructions: site is located approximately 11.7 miles NE of Lovington, NM at GPS coordinates 33.043619, -103.169767

An OCD representative may be available onsite at the date and time reported. In the absence or presence of an OCD representative, sampling pursuant to 19.15.29.12.D NMAC is required. Sampling must be performed following an approved sampling plan or pursuant to 19.15.29.12.D.(1).(c) NMAC. Should there be a change in the scheduled date and time of the sampling event, then another notification should be resubmitted through OCD permitting as soon as possible.

- Failure to notify the OCD of sampling events including any changes in date/time per the requirements of 19.15.29.12.D.(1).(a) NMAC, may result in the remediation closure samples not being accepted.
- If confirmation sampling is going to take place over multiple days, individual C-141N applications must be submitted for each sampling date. Date ranges are not currently accepted on the C-141N application.

If you have any questions regarding this application, or don't know why you have received this email, please contact us.

See email acceptance below for sampling for June 3, 2026.

As a reminder, I will be out of the office without good internet access starting June 5. I will not return to the office until June 15. I will be unable to submit notices to the OCD during this time.

Thanks,

Heidi

To: Heidi Stone
Subject: The Oil Conservation Division (OCD) has accepted the application, Application ID: 599218

To whom it may concern (c/o Heidi Stone for DAVIS GAS PROCESSING CO),

The OCD has received the submitted *Notification for (Final) Sampling of a Release (C-141N)*, for incident ID (n#) nRM2033752202.

The sampling event is expected to take place:

When: 07/01/2026 @ 10:00

Where: J-02-15S-37E 0 FNL 0 FEL (33.044544,-103.169415)

Additional Information: W. Kierdorf 512-289-3272

Additional Instructions: The site is located approximately 11.7 miles NE of Lovington, NM at GPS coordinates 33.043619, -103.169767

An OCD representative may be available onsite at the date and time reported. In the absence or presence of an OCD representative, sampling pursuant to 19.15.29.12.D NMAC is required. Sampling must be performed following an approved sampling plan or pursuant to 19.15.29.12.D.(1).(c) NMAC. Should there be a change in the scheduled date and time of the sampling event, then another notification should be resubmitted through OCD permitting as soon as possible.

- **Failure to notify the OCD of sampling events including any changes in date/time per the requirements of 19.15.29.12.D.(1).(a) NMAC, may result in the remediation closure samples not being accepted.**
- **If confirmation sampling is going to take place over multiple days, individual C-141N applications must be submitted for each sampling date. Date ranges are not currently accepted on the C-141N application.**

If you have any questions regarding this application, or don't know why you have received this email, please contact us.
