# 1. Introduction

On behalf of Chevron Mid-Continent Business Unit (MCBU), AECOM Technical Services, Inc. (AECOM) has prepared this *Remedial Summary Report and Limited Deferral Request* to describe soil excavation and confirmation sampling results associated with remediation activities conducted from July 2024 through April 2025. The remedial activities were conducted to address soil impacts resulting from a produced water release that occurred at the Amoco Federal 11 Central Tank Battery (CTB) spill site in Eddy County, New Mexico (the "Site") in June 2022, as well as other historical impacts that were encountered during delineation of the June 2022 release.

## 2. Site Setting and Background

The Site is located at Latitude 32.31808478° North, Longitude 104.05284149° West, in Eddy County, New Mexico (**Figure 1**). Site features include a caliche well pad, product flow lines, electrical service lines, and an active tank battery and heater-treater battery along the western and southern portions of the pad, respectively. A former oil well with pump jack was located in the central portion of the pad and was plugged and abandoned between late May and mid July 2024. The Site is located on U.S. Bureau of Land Management (BLM) land.

Operations near the Site are for oil and gas exploration, development, production, and storage. The Site is surrounded by other active and inactive well pads to the north, south, east, and west. The Pecos River is located approximately 940 feet west of the western edge of the well pad. New Mexico Salt and Minerals Corporation is located approximately 1.5 miles to the southeast of the Site. No sensitive environmental and/or ecological receptors were identified within the search criteria distances described in 19.15.29.11 and 19.15.29.12.C.(4) New Mexico Administrative Code (NMAC).

The soil underlying the caliche well pad is comprised of fine to very fine silty and gravelly sand generally to a depth of about 3 to 4 feet below ground surface (bgs) but extending as deep as 20 feet bgs near the south-central portion of the pad. Caliche is present as intermittent layers and lenses from as shallow as 1.5 feet bgs to at least 46 feet bgs (the maximum depth drilled at the Site). The caliche ranges in thickness from less than 1 foot to approximately 10 feet thick in some areas. At depths greater than 20 feet bgs, soil lithologies are variable in character but are generally characterized by well-graded, gravelly, fine to medium sand with lesser amounts of clayey sand and low plasticity clays (sandy to silty clay and gravelly clay) extending up to 45 feet bgs in some areas (DB-19). Groundwater was first encountered at approximately 33 feet bgs during installation of a temporary monitor well in May 2024.

### 2.1 Initial Hydrocarbon Release

On June 3, 2022, a release was discovered at the Site, which included approximately 1.6 barrels (bbls) of crude oil and 4.7 bbls of produced water. The release was reported to have occurred when a two-phase liquid sump became plugged and prevented flow, causing the vessel to overflow. One bbl of crude oil was reported to have been recovered from the release area.

As required by the New Mexico Oil Conservation Division (NMOCD) under 19.15.29 NMAC, Chevron's initial response to the releases included:

- Stopping the release at the source,
- Securing the impacted soil area to protect human health and the environment,
- Containing the released crude oil produced water, and

- Recovering one bbl of crude oil.

A Release Notification C-141 Form, dated June 14, 2022, was submitted to the NMOCD. The C-141 Form documents the responsible party, location of the release source, nature, and volume of the release, and initial response to the release. The NMOCD assigned Incident ID # nAPP2216547154 to the Site release. The original C-141 Form is provided in **Appendix A**.

It is noted that the above reported release was considered a minor release (<25 bbls) with a relatively small footprint. Based on the chloride delineation sampling results and age of the well pad, it is evident that historical impacts were encountered, which occurred prior to Chevron's purchase of this asset, while attempting to delineate this minor release, as further described in the following section.

## 2.2 Soil Assessment and Delineation History

The following soil assessment and delineation activities have been conducted at the Site:

- On **August 23, 2022**, initial soil assessment activities were conducted at the Site, which included drilling and sampling of ten hand auger borings (B-1 through B-10) to depths of 3 to 4 feet bgs. Soil samples were collected at 1-foot intervals from each of the borings and field-screened using a photoionization detector (PID) to measure volatile organic vapor concentrations. Soil samples were analyzed for benzene, toluene, ethylbenzene, and xylenes (BTEX) by Environmental Protection Agency (EPA) Method 8021B, total petroleum hydrocarbons (TPH) by EPA Method 8015 NM, and chloride by EPA Method 300.0.
- In **November 2022**, soil delineation samples were collected from ten borings (DB-1 through DB-10) that were drilled to depths ranging from 4 to 10 feet bgs using a combination of hand auger and direct-push drilling and sampling equipment. Soil samples from select borings and depth intervals were submitted for laboratory analysis of chloride and TPH using the methods described above.
- In **February 2023**, borings DB-11 through DB-18 were drilled using air rotary drilling equipment and soil samples were collected for additional horizontal and vertical delineation of chloride-impacted soil. The drilling and sampling activities included the following:
  - Boring DB-11 was drilled to 29 feet bgs using air rotary drilling equipment;
  - Borings DB-12 through DB-14 were drilled to 10 feet bgs using air rotary drilling equipment; and
  - Borings DB-15 through DB-18 were drilled to 5 feet bgs using air rotary drilling equipment.
- In **March 2023**, hand auger borings DB-15A through DB-15C and DB-17A through DB-17C were advanced to depths of 1 to 2 feet bgs and sampled for horizontal delineation of elevated chloride concentrations in shallow soil.
- On **April 17, 2024**, six additional horizontal step-out hand auger borings (DB-19A through 19C and DB-20A through 20C) were advanced to 1 to 2 feet bgs and sampled, at locations north and northeast of the previous sample locations and estimated footprint of impacted soil.
- On **April 23, 2024**, two additional horizontal step-out sample locations (DB-19D and DB-20D) were sampled off the edge of the Amoco pad to the north and northeast.
- On **May 28-30, 2024**, one additional deeper soil boring (DB-19/MW-1) was advanced to a total depth of 46 feet bgs to confirm the presence/absence of groundwater within the upper 51 feet of soils underlying the Site. Soil samples were collected in DB-19/MW-1 at 2-foot intervals from 10 to 18 feet bgs, and chloride was not reported above 600 ppm below 16 feet bgs. A temporary monitoring well (MW-1) was installed as a flush-mount well with 2-inch diameter polyvinyl chloride (PVC) casing and screened from 30 to 45 feet bgs. The soil boring and monitoring well construction log is included in **Appendix B**. Groundwater was encountered at approximately 33 feet bgs during drilling of the monitoring well borehole. Following installation of MW-1, groundwater was observed at a depth of approximately 27.5 feet bgs, indicating that the water-bearing unit occurs under confined conditions.

Groundwater samples were not collected from MW-1 as groundwater is separated by at least 15 feet of soil beyond the deepest chloride exceedance, including clay between 22 to 26 and 30 to 33 feet bgs. The monitoring well was subsequently plugged and abandoned on July 17, 2024.

The soil assessment and delineation activities were documented in the *Delineation Report and Remediation Plan*, dated August 23, 2023, and the *Revised Delineation Report and Remediation Plan*, dated April 29, 2024. The locations of soil borings advanced at the Site from August 2022 through May 2024 are shown on **Figure 2**, and the analytical results from the delineation sampling events described above are presented on **Figure 3A** (TPH) and **Figure 3B** (Chloride). Benzene and BTEX results were below the regulatory limits for all soil samples analyzed. Soil analytical results were compared to Table I, Closure Criteria for Soils Impacted by a Release provided in 19.15.29.12 NMAC, which includes the following regulatory limits:

| Table I<br>Closure Criteria for Soils Impacted by a Release                                                          |                   |           |
|----------------------------------------------------------------------------------------------------------------------|-------------------|-----------|
| Minimum depth below any point within the horizontal boundary of the release to groundwater less than 10,000 mg/L TDS | Constituent       | Limit     |
| ≤ 50 feet bgs                                                                                                        | Chloride          | 600 mg/kg |
|                                                                                                                      | TPH (GRO+DRO+MRO) | 100 mg/kg |
|                                                                                                                      | BTEX              | 50 mg/kg  |
|                                                                                                                      | Benzene           | 10 mg/kg  |

Based on the presence of groundwater observed in monitoring well MW-1 at approximately 27.5 feet bgs, the applicable closure criteria for the Site are 600 milligrams per kilogram (mg/kg) for chloride and 100 mg/kg for TPH. These limits are also consistent with the requirements specified for the upper four feet of soil under 19.15.29.13.D.(1) NMAC for *RESTORATION, RECLAMATION AND RE-VEGETATION*.

### 3. Soil Remediation/Reclamation

Soil remediation/reclamation was performed at the Site from July to September 2024 and April 2025 to address the following regulatory requirements applicable to the site:

- Soil remediation requirements in *Table I, Closure Criteria for Soils Impacted by a Release* provided in 19.15.29.12 NMAC; and
- Soil reclamation requirements under 19.15.29.13.D.(1) NMAC.

Soil remediation/reclamation activities were conducted for the majority of the well pad from July 19 to September 11, 2024. Additional post-excavation drilling and soil sampling for further delineation/confirmation of chloride concentrations was conducted from February 4 to 10, 2025, per the approved *Post-Excavation Sampling Plan*, December 18, 2024. Following decommissioning and removal of product flow lines and meters (Enterprise Assets) in the southeast portion of the well pad in early April 2025, which precluded remedial excavation and sampling in this area in 2024, additional soil remediation/reclamation activities were conducted underneath the former flow lines from April 22 to 25, 2025. Remediation/reclamation was performed by excavation and offsite disposal of impacted soil, following the NMOCD-approved remediation plans. The impacted soil was excavated to depths ranging from 2.0 to 20 feet bgs, as presented on **Figures 4 and 5**. Site photographs documenting the excavation and backfilling activities from July-September 2024 and April 2025 are provided in **Appendix C**. The soil remediation/reclamation activities and associated confirmatory sampling results are summarized below.

## 3.1 2024 Remedial Excavation and Sampling Activities

In conjunction with excavation of impacted soil, confirmation samples were collected from the walls and base of the excavation. Per NMOCD requirements, representative five-point composite samples were collected approximately every 50 linear feet from the walls and approximately every 500 square feet from the base of the excavation. No obvious wet or discolored (stained) areas were observed during excavation activities nor elevated photoionization detector (PID) readings recorded; therefore, no individual grab samples were collected (i.e., all samples are composites). A high-resolution Trimble GPS unit, with an antenna and tripod, was utilized to mark out the planned sampling grid, which was uploaded to the unit prior to field activities, and used in the field to locate each grid both prior to and during sample collection. Sample locations were re-recorded with the GPS if moved from the originally planned location (i.e., primarily wall samples which extended further horizontally following initial results). At locations where the excavation extended to previously reported clean delineation sample locations, those sample results were also utilized to further confirm the removal of the impacted soil (i.e., DB-2, DB-4, DB-5, DB-6, DB-8, DB-11, DB-13, DB-14, DB-15, DB-16, and DB-19), though the number of confirmation samples was not reduced.

The soil excavation activities were completed using a bulldozer, a trackhoe equipped with an excavator bucket, and another trackhoe equipped with a hydraulic hammer for perforating and breaking apart caliche layers. Hydrovac equipment was used to remove surficial soils along active product flow lines and electrical service lines. Multiple abandoned flow lines were identified across the excavation footprint, cleared using hydrovac equipment, and subsequently removed from the excavation area. Samples were also collected along the edges of areas containing active oil and gas infrastructure that could not be fully excavated (i.e., beneath product flow lines, which were later removed in 2025) and where deferral is being requested (i.e., under the heater-treater battery and a small strip under an active electrical line). The soil confirmation samples were collected in clean, laboratory-provided sample containers, labeled, placed on ice in laboratory-provided coolers, and documented on Chain-of-Custody forms. The soil samples were delivered by laboratory courier to the Eurofins Environment Testing analytical laboratory in Midland, Texas (Eurofins Midland).

The soil confirmation samples were submitted for laboratory analysis of chloride by EPA Method 300.0 and TPH by EPA Method 8015 NM. Although no previous exceedances of BTEX were reported at the Site during delineation sampling events, analysis of BTEX by EPA Method 8021B was also conducted, at the request of the NMOCD. Since some sample locations were inadvertently missed for analysis of BTEX and TPH, a variance request was submitted in the above referenced post-excavation sampling plan and later approved by the OCD in the December 19, 2024 sampling plan approval email (**Appendix A**).

Confirmation sample locations which reported chloride and/or TPH concentrations in excess of their applicable reclamation standards (600 mg/kg and 100 mg/kg, respectively) were subsequently excavated to progressively deeper intervals (ranging from 0.25 to 1.00 foot) and resampled until concentrations were reported below the regulatory limits. In addition to utilizing a PID for field screening of soil samples, a field chloride titration kit was also utilized to assist with directing the excavation and sample collection efforts; however, interferences from the caliche soils at the Site made correlation to lab results more challenging/variable at lower concentrations. The confirmation soil sampling results are summarized in **Table 1**. Laboratory analytical reports are provided in **Appendix D**.

### 3.1.1 Confirmatory Excavation Base Sampling and Analytical Results

A total of 112 base confirmation locations were sampled as five-point composite samples, representative of approximately 500 square feet, as shown on **Figures 4** and **5**. Due to persistently reported chloride exceedances, generally between 600 and 1,500 mg/kg, reported in the northwest corner and along the eastern flank of the excavation, as well as a few localized areas across the excavation footprint, several base sample locations in these areas required additional excavation and subsequent resampling with up to seven or eight progressively deeper samples. The final depth intervals (average depth across sampling grid if variable) where soil concentrations were reported below the applicable reclamation standards are provided in parenthesis at each sample location on **Figures 4** and **5**. Since chloride was

the primary constituent of concern, and only three samples initially exceeded for TPH, only the final chloride concentrations are shown on **Figure 4**. BTEX and TPH analytical results are provided in **Table 1**. Across the excavation area, the depths to the excavation base ranged from 2.0 to 20 feet bgs.

For the eastern area, soil was over-excavated down to a very hard caliche rock layer between approximately 15 to 20 feet bgs, to ensure removal of impacted soil, but which precluded the collection of base samples from this portion of the remedial excavation at the time (**Figure 4**). Additional vertical delineation/confirmation soil sampling below the caliche rock layer was later conducted in February 2025 using a sonic drill rig, as described further below in Section 3.2.

### 3.1.2 Confirmatory Excavation Wall Sampling and Analytical Results

A total of 23 wall confirmation locations were sampled as five-part composite samples representative of approximately 50 linear feet along the perimeter of the excavation as shown on **Figures 4** and **5**. The walls of the excavation area were extended horizontally as needed, wherever wall confirmation samples reported chloride concentrations exceeding the reclamation standard (600 mg/kg). The walls were over-excavated and subsequently resampled until soil concentrations were reported below the reclamation standard. The locations of the wall confirmation samples depicted on **Figures 4** and **5** represent the final extents of the remedial excavation area where concentrations were reported below the closure criteria.

## 3.2 2025 Post-Excavation Drilling and Soil Sampling

To address data gaps that remained in the eastern area and the heater-treater battery area following the 2024 soil remediation/reclamation activities, a total of 14 additional soil borings (SB-01 through SB-14) were advanced at the Site using a combination of hand auger and sonic drilling methods from February 4 to 10, 2025, per the approved December 18, 2024 sampling plan. The locations of the soil borings are shown on **Figure 5**, and boring logs are provided in **Appendix B**. The positioning of the boring locations, total depths, and rationale for the additional sampling are discussed in further detail below (and as presented in the December 18, 2024 sampling plan):

- Soil borings SB-01 through SB-08 were drilled to depths of 30 to 35 feet bgs in the eastern area to determine chloride concentrations below the caliche rock layer that was encountered at 15 to 20 feet bgs during the 2024 remedial excavation activities. Soil lithologies observed below 20 feet bgs at these locations were generally characterized by well-graded, gravelly sand, caliche lenses ranging from 1 to 8 feet thick, and minor amounts of clayey sand, sandy clay, and gravelly clay. It is noted that at soil boring SB-02, approximately 2 feet of well-graded, rounded fluvial gravel ranging from small pebbles to large cobbles was encountered from 20 to 22 feet bgs (**Appendix B**).
  - SB-01, SB-02, and SB-04 through SB-08 were positioned at approximately the same locations as where previous chloride exceedances were reported in the eastern area trench that was excavated down to 15 to 20 feet bgs.
  - Soil boring SB-03 was positioned along the approximate western flank of the former trench to demonstrate that chloride exceedances previously reported in the eastern area did not extend further west to shallower portions of the remedial excavation.
- Soil boring SB-09 was drilled to a depth of 20 feet bgs adjacent to the eastern edge of the 2024 excavation footprint to further confirm concentrations for the deeper portion of excavation wall at CSW-2.
- Soil borings SB-10 through SB-14 were drilled to various depths to further refine the horizontal and vertical extents of chloride and TPH exceedances within and immediately adjacent to the heater-treater battery (i.e., where limited deferral is being requested). Soil lithologies at SB-10 were dominated by well-graded gravelly sand and sandy clay. Soil lithologies at SB-11 through SB-14 were dominated by well-graded silty sand with caliche gravel.

- Soil borings SB-10 and SB-11 were drilled to depths of 30 feet bgs and 10 feet bgs, respectively, to further refine the horizontal and vertical delineation of chloride exceedances previously reported at confirmatory excavation wall sample locations CSW-16 and CSW-16A in 2024 (**Table 2**). In addition, approximately 3 to 6 inches of soil was removed via hydrovac to remove stained soil within the heater-treater battery in the area shown on **Figure 5**.
- Soil borings SB-12 through SB-14 were advanced to 4 feet bgs using a hand auger to further refine the horizontal and vertical delineation of chloride and TPH.

A total of 45 soil samples were collected and analyzed for chloride, TPH, and BTEX from the 14 soil borings. The laboratory analytical results for the soil boring samples are presented on **Figure 5** and in **Table 2**, and the associated laboratory analytical reports are included in **Appendix D**. The results of the February 2025 soil drilling and sampling activities are summarized as follows:

- BTEX concentrations were reported below laboratory method detection limits for all samples collected and analyzed, except for one estimated concentration of benzene (0.00152 J mg/kg) reported well below the closure criteria (10 mg/kg) for the soil sample collected from SB-03 (20-21').
- Exceedances of the TPH closure criteria (100 mg/kg) were limited to the upper 1 foot of soils at SB-11 and SB-13, and the upper 2 feet of soil from SB-10 (**Table 2** and **Figure 5**), all of which are located within the heater-treater battery area. TPH concentrations were reported below laboratory detection limits and/or the TPH closure criteria for all other samples collected and analyzed.
- For the eastern area base sample soil borings, chloride concentrations were reported below the applicable closure criteria (600 mg/kg) in samples collected below 20 feet bgs from SB-01 and SB-03 through SB-08, and below 23 feet bgs at SB-02<sup>1</sup>. The uppermost interval at SB-02 (20-22') was reported slightly above 600 mg/kg at 642 mg/kg, however, was vertically delineated above the groundwater and at the next deeper interval (23-24').
- For the eastern area wall sample soil boring (SB-09), chloride concentrations were reported below the applicable closure criteria for the 5-10 foot interval and duplicate sample for the 10-15 foot interval. The parent sample for the 10-15 foot interval and the 15-20 foot intervals were slightly above 600 mg/kg at 609 and 680 respectively.
- For the heater-treater area borings, chloride concentrations were reported below the closure criteria in samples collected below 13 feet bgs at SB-10, below 4 feet bgs at SB-11, and all samples collected at SB-12 and SB-14 (0 to 4 feet bgs). Chloride exceedances were reported up to the maximum sample depths at SB-09 (from 15 to 20 feet bgs) and SB-13 (from 1 to 4 feet bgs).

It is noted that based on a discussion of the post-excavation drilling results with the OCD during a **meeting on February 21, 2025**, the three samples with chloride concentrations slightly over 600, were acceptable and considered residual based on the collected samples, delineation and excavation activities conducted.

### 3.3 2025 Remedial Excavation and Sampling Activities – Enterprise Lines/Area

During the initial remedial excavation and sampling activities conducted in July through September 2024, active product flow lines and meter sheds owned and operated by Enterprise Products Operating LP (Enterprise) were present in the southeast portion of the excavation area. As such, the area underlying

<sup>1</sup> It is noted that an exceedance of the chloride regulatory limit was reported at 642 mg/kg for the soil sample collected from SB-02 at 20 to 22 feet bgs (**Table 2** and **Figure 5**). However, this is the same depth interval in which pebble to cobble-sized fluvial gravel was encountered during drilling (**Appendix B**). Due to the limitations associated with sampling and running laboratory analysis on coarse gravel, it is possible that the laboratory results for this soil sample might not be fully representative of chloride concentrations at this location (i.e., biased high).

the flow lines and meter sheds could not be excavated and sampled in 2024 while the infrastructure was in place. Later in early April 2025, however, Enterprise decommissioned and removed the meter sheds and the aboveground section of the flow lines and capped the section of the flow lines below the ground surface in the southeast portion of the well pad.

Following the decommissioning and removal of the Enterprise infrastructure as described above, additional soil remediation/reclamation activities were conducted in this portion of the Site from April 22 to 25, 2025. The soil excavation activities were completed using hydro-vac, a trackhoe equipped with an excavator bucket, and another trackhoe equipped with a hydraulic hammer for perforating and breaking apart caliche layers. Representative five-point composite samples were collected approximately every 200 square feet from the base of the excavation, which ranged from 4 to 5 feet bgs. Similar to the 2024 excavation activities, a PID and a field chloride titration kit were used for field screening of soil samples and assisting with directing the excavation and sample collection efforts. A total of 4 composite samples were collected from the area underlying the former Enterprise lines (EL-1 through EL-4), and analyzed for chloride, TPH, and BTEX. The laboratory analytical results for the 2025 confirmatory soil samples indicated that all BTEX compounds were reported below laboratory method detection limits, all TPH results were reported below the TPH reclamation standard (100 mg/kg), and all chloride results were reported below the chloride reclamation standard (600 mg/kg) with concentrations ranging from 256 to 298 mg/kg. The results from the 2025 excavation activities are presented in **Table 2** and depicted on **Figure 5**, and the associated analytical reports are included in **Appendix D**.

### 3.4 Backfill Soil Sampling and Analytical Results

For the remedial excavation conducted from July through September 2024, backfill material was sourced from a Chevron-approved native soil pit located west of the Site, on the opposite side of the Pecos River along Refinery Road. Prior to use, six composite samples of backfill material were collected and submitted to Eurofins Midland for analysis of chloride, TPH, and BTEX using the laboratory analytical methods described above. In addition, two additional composite samples were also collected at the approximate halfway point of the backfilling operations to further confirm consistent concentrations. The laboratory analytical results for the backfill samples indicated BTEX and TPH concentrations below laboratory method detection limits and chloride concentrations ranging from 19.8 to 108 mg/kg.

For the additional excavation below the Enterprise product flow lines completed in April 2025, backfill material was sourced from the R360 Red Bluff Facility located at 5053 US Hwy 285, Orla, TX. Prior to use, one composite sample of the backfill material was collected and sampled for chloride, TPH, and BTEX. The laboratory analytical results for the backfill sample indicated BTEX and TPH concentrations below the laboratory method detection limits and/or closure criteria, and a chloride concentration of 214 mg/kg. **Table 3** presents the backfill sample results for both remedial excavation events, and the associated laboratory analytical reports are included in **Appendix D**.

## 4. Soil Disposition and Excavation Backfilling

During the July-September 2024 remedial excavation across the well pad, approximately 10,100 cubic yards of soil was excavated and transported offsite for disposal as oil and gas exploration and production (E&P) exempt waste at the R360 Halfway Facility (NM1-006) located at 6601 Hobbs Hwy US 62/180 Mile Marker 66 Carlsbad, NM,. During the April 2025 remedial excavation below the Enterprise flow lines, an additional volume of approximately 326 cubic yards was excavated and transported offsite for disposal as E&P exempt waste at the R360 Red Bluff Facility in Orla, TX,. In total, a combined volume of approximately **10,426 cubic yards** of soil was excavated and transported offsite during the two remedial excavation events. Soil disposal manifests for all loads generated during both excavation events are

provided in **Appendix E**. Following confirmation of clean samples from each of the excavation areas, backfilling was conducted until each portion of the excavation areas were restored to approximately their previous surface elevations. Backfill was placed in lifts and compacted with a combination of track packing, roller, and water truck.

## 5. Request for Limited Deferral

Deferral of soil remediation is proposed for a limited area and relatively small volume of soil (approximately 300 cubic yards) within the bermed area containing the active heater-treater and separator on concrete pads, and a small strip below the electrical service line located directly west of the heater-treater area. The areas requested for limited deferral are shown on **Figure 5**. Excavation in these areas would have required a major facility deconstruction (NMAC 19.15.29.12C.(2)); therefore, remediation of impacted soil through additional excavation and confirmatory sampling in this area is respectfully being requested to be completed when production operations are discontinued at the Site and the active infrastructure and utilities are decommissioned. Confirmation samples for these areas were collected for documentation and chloride concentrations range between 654 to 2,160 mg/kg as presented in **Table 1**. Additional delineation sampling was also conducted during the post-excavation drilling as described above and as shown on **Figure 5**. BTEX and TPH were reported either below the detection limits and/or below the closure criteria with the exception of four shallow samples (0-1 or 1-2') for TPH from the post-excavation drilling, located within the bermed area. A hydro-vac was also utilized during the additional delineation drilling (post-excavation event), to remove the upper 3-6 inches of stained soil from within the bermed area around the oil and gas equipment as shown.

## 6. Conclusions

Based on completion of remedial excavation and confirmatory sampling activities, offsite disposal of impacted soil, backfilling with clean, imported soil, and communications with the OCD, no further action is currently considered warranted for the Site due to the following:

- The final excavation wall samples and base confirmation samples exhibited chloride and TPH concentrations below the soil reclamation limits/closure criteria of 600 mg/kg and 100 mg/kg, respectively.
- Post-excavation drilling sample results further confirmed removal of the vast majority of impacted soil and further confirmed vertical delineation above the groundwater.
- Final excavation depths across the remediation area ranged from approximately 2.0 to 20 feet. The total combined volume of impacted soil transported offsite was approximately 10,426 cubic yards.
- Benzene and BTEX concentrations were reported below the closure criteria (10 mg/kg and 50 mg/kg, respectively) and/or laboratory method detection limits for all soil samples collected and analyzed.
- Deferral of soil remediation is proposed for a limited area and relatively small volume of soil (approximately 300 cubic yards) within the bermed area containing the active heater-treater and separator located on concrete pads, and a small strip below the electrical service line located directly northwest of the heater-treater area.

- Notes:
- 1. Soil analyses performed by Eurofins Environment Testing in Midland, Texas.
  - 2. All analytical data are reported in units of milligrams per kilogram (mg/kg).
  - 3. Regulatory Limits are from 19.15.29 New Mexico Administrative Code (NMAC) - "Closure Criteria for Soils Impacted by a Release."
  - 4. "--" indicates that no applicable regulatory limit exists for that analyte.
  - 5. "ft bgs" - feet below ground surface.
  - 6. "GRO" - Gasoline Range Organic Compounds
  - 7. "DRO" - Diesel Range Organic Compounds
  - 8. "MRO" - Motor Oil/Lube Range Organic Compounds
  - 9. "NA" - Not analyzed.
  - 10. "NM" - Not measured.
  - 11. Results reported below laboratory Sample Detection Limits (SDLs) are preceded by "<".
  - 12. Bold values represent detectable concentrations above the SDLs.
  - 13. Bold and Shaded - Reported concentration exceeds NMAC Regulatory Limits.
  - 14. Results followed by "F1" indicate Matrix Spike (MS) and/or Matrix Spike Duplicate (MSD) recovery exceeds laboratory control limits.
  - 15. Results followed by "1" indicate that Laboratory Control Sample (LCS) and/or Laboratory Control Sample Duplicate (LCS-D) Relative Percent Difference is outside laboratory control limits.
  - 16. Results followed by "+" indicate that LCS and/or LCS-D is outside laboratory control limits, and result is potentially high-biased.
  - 17. Results followed by "J" indicate an estimated concentration, which is less than the Reporting Limit but greater than or equal to the SDL.
  - 18. Results followed by "B" indicate that the analyte was detected in a laboratory blank.
  - 19. Soil removed down to very hard/competent rock layer - further sampling not possible.
  - 20. Sample collected from deferred area for documentation.

## Notes:

- Soil analyses performed by Eurofins Environment Testing in Midland, Texas.
- All analytical data are reported in units of milligrams per kilogram (mg/kg).
- Regulatory Limits are from 19.15.29 New Mexico Administrative Code (NMAC) - "Closure Criteria for Soils Impacted by a Release."
- "--" Indicates that no applicable regulatory limit exists for that analyte.
- "ft bgs" - feet below ground surface.
- "GRO" - Gasoline Range Organic Compounds
- "DRO" - Diesel Range Organic Compounds
- "MRO" - Motor Oil/Lube Range Organic Compounds
- DUP - field duplicate sample.
- Results reported below laboratory Sample Detection Limits (SDLs) are preceded by "<".
- Bold values represent detectable concentrations above the SDLs.
- Bold and Shaded - Reported concentration exceeds NMAC Regulatory Limits.**
- Results followed by "F1" indicate Matrix Spike (MS) and/or Matrix Spike Duplicate (MSD) recovery exceeds laboratory control limits.
- Results followed by "F2" indicate MS/MSD relative percent difference (RPD) exceeds laboratory control limits.
- Results followed by "J" indicate an estimated concentration, which is less than the Reporting Limit but greater than or equal to the SDL.
- Results followed by "(\*)" indicate Laboratory Control Sample (LCS) and/or Laboratory Control Sample Duplicate (LCS-D) is outside laboratory control limits, and result is potentially high-biased.
- Results followed by "B" indicate that the analyte was detected in a laboratory blank.

**Notes:**

- Soil analyses performed by Eurofins Environment Testing in Midland, Texas.
- All analytical data are reported in units of milligrams per kilogram (mg/kg).
- Regulatory Limits are from 19.15.29 New Mexico Administrative Code (NMAC) - "Closure Criteria for Soils Impacted by a Release."
- "--" Indicates that no applicable regulatory limit exists for that analyte.
- "ft bgs" - feet below ground surface.
- "GRO" - Gasoline Range Organic Compounds
- "DRO" - Diesel Range Organic Compounds
- "MRO" - Motor Oil/Lube Range Organic Compounds
- Results reported below laboratory Sample Detection Limits (SDLs) are preceded by "<".
- Bold** values represent detectable concentrations above the SDLs.
- Results followed by (\*1) indicate Laboratory Control Sample (LCS) and/or Laboratory Control Sample Duplicate (LCSD) Relative Percent Difference is outside laboratory control limits.
- Results followed by (+) indicate that LCS and/or LCSD is outside laboratory control limits, and result is potentially high-biased.
- Results followed by "F1" indicate Matrix Spike (MS) and/or Matrix Spike Duplicate (MSD) recovery exceeds laboratory control limits.

Remedial Summary Report and  
Limited Deferral Request

**Subject:** [**\*\*EXTERNAL\*\***] The Oil Conservation Division (OCD) has approved the application, Application ID: 413774

To whom it may concern (c/o Amy Barnhill for CHEVRON U S A INC),

The OCD has approved the submitted *Internal Manual Incident File Supporting Documentation (ENV)* (IM-BNF), for incident ID (n#) nAPP2216547154, with the following conditions:

- **Sampling plan and variance request for the requirement to resample previously sampled locations which were missed for BTEX and TPH during the excavation activities are approved. A complete and accurate report (either a complete remediation closure report or remediation plan, whichever is applicable), is due by 2/28/2025.**

The signed IM-BNF can be found in the OCD Online: Imaging under the incident ID (n#).

If you have any questions regarding this application, please contact me.

**From:** OCDOnline@state.nm.us <OCDOnline@state.nm.us>  
**Sent:** Wednesday, October 2, 2024 12:05 PM  
**To:** Barnhill, Amy <ABarnhill@chevron.com>  
**Subject:** [**\*\*EXTERNAL\*\***] The Oil Conservation Division (OCD) has rejected the application, Application ID: 388004

To whom it may concern (c/o Amy Barnhill for CHEVRON U S A INC),

The OCD has rejected the submitted *Application for administrative approval of a release notification and corrective action* (C-141), for incident ID (n#) nAPP2216547154, for the following reasons:

- **Numerous confirmation/final samples were not analyzed for all Table I constituents of concern (TPH, BTEX, and chloride) as instructed in the conditions of approval for the remediation plan on 5/8/2024.**
- **Sample analytical results from CSW-02 indicate that the sample was collected from 0-3' bgs. Representative samples of the deeper portions of the excavation walls adjacent to the deeper excavation must be collected and analyzed for TPH, BTEX, and chloride.**
- **Sample depths found on the table and the laboratory analytical results for CSB-048, CSB-049, CSB-058, CSB-059, CSB-068, CSB-069, CSB-077 and CSB-086 do not correlate with the sample depths indicated on the map. Clarify as to why samples were not collected at the total depth of the excavation at these sample locations. Samples must be collected at the total depth of the excavation prior to submitting a closure report.**

- **Include a copy of the analytical results of the samples that were collected from DB-19/MW-1.**
- **The OCD reviews each deferral request on a case-by-case basis. Major facility deconstruction typically involves concrete poured pads, structures, engineered designed facilities that include automation/electrical lines, sprayed in lines, etc. After review, OCD does not consider the remediation of this release to require a major facility deconstruction. A deferral for this release will not be granted and the release will need to be remediated to the most stringent closure criteria.**
- **Include all correspondence via email for extensions, sampling variances, etc. in the next submission.**
- **All additional confirmation samples collected after 10/2/2024 must have appropriate sampling notifications submitted through the OCD permitting website on the C-141N. Sampling notifications must be submitted at least 2 full business days prior to collection pursuant to 19.15.29.12.D.(1)(a) NMAC.**
- **Submit a complete and accurate report through the OCD permitting website by 11/22/2024.**

The rejected C-141 can be found in the OCD Online: Permitting - Action Status, under the Application ID: 388004.

Please review and make the required correction(s) prior to resubmitting.

If you have any questions why this application was rejected or believe it was rejected in error, please contact me prior to submitting an additional C-141.

| If YES, was immediate notice given to the OCD? By whom? To whom? When and by what means (phone, email, etc)?                          |                                                                                      |

### Initial Response

*The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury*

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                         |

| Per 19.15.29.8 B. (4) NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please attach a narrative of actions to date. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see 19.15.29.11(A)(5)(a) NMAC), please attach all information needed for closure evaluation.                                                                                                                                                                                                                                                                                                                                                                                      |                         |
| I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. |                         |

## Spill Calculations:

### Area 1

Shape: Rectangle

Secondary Containment?: No

Standing Liquid Dimensions: 15 ft x 10 ft x 1 in

Total Volume: 2.310 bbl

Water Cut: 75%

Oil Volume:.578 bbl

Penetration Depth: .25 in

Fluid to Soil Volume: .083 bbl

Water Volume: 1.732 bbl

### Area 2

Shape: Rectangle

Secondary Containment?: No

Standing Liquid Dimensions: 10 ft x 25 ft x .5 in

Total Volume: 1.994 bbl

Water Cut: 75%

Oil Volume: .499 bbl

Penetration Depth: .25 in

Volume to Soil Volume: .139 bbl

Water Volume: 1.495 bbl

### Area 3

Shape: Rectangle

Secondary Containment?: No

Standing Liquid Dimensions: 10 ft x 12 ft x .25 in

Total Volume: .512 bbl

Water Cut: 75%

Oil Volume: .128 bbl

Penetration Depth: .25 in

Fluid to Soil Volume: .067 bbl

Water Volume: 0.384 bbl

### Area 4

Shape: Rectangle

Secondary Containment?: No

Standing Liquid Dimensions: 35 ft x 20 ft x .125 in

Total Volume: 1.494 bbl

Water Cut: 75%

Oil Volume: .374 bbl

Penetration Depth: .125 in

Fluid to Soil Volume: .195 bbl

Water Volume: 1.12 bbl

Remedial Summary Report and  
Limited Deferral Request

**CLIENT** Chevron MCBU

**PROJECT NAME** MCBU NM Spill Sites

**PROJECT NUMBER** 60743624

**PROJECT LOCATION** Loving, Eddy County, NM

**DATE STARTED** 2/4/25    **DRILLING CONTRACTOR** Savage Drilling

### GROUND ELEVATION

**COMPLETED** 2/6/25      **DRILLING METHOD** Geoprobe GV5 Sonic

## GROUND WATER LEVEL

**LOGGED BY** J. Lovely **CHECKED BY** B. Cland

**AT TIME OF DRILLING ---**

**NOTES** Amoco Federal 11 CTB - Post-Remedial Excavation soil boring.

**LATITUDE** 32.318058

**LONGITUDE** -104.052929

**Sample Type:**

HA-Hand Auger; HSA-Hollow Stem Auger; SSA - Solid Stem Auger; DP- Direct Push; SC - Sonic Core

**BOREHOLE DIAMETER 6"**

WELL DIAMETER

I hereby certify that the above listed material(s), is (are) not hazardous waste as defined by 40 CFR Part 261 or any applicable state law. That each waste has been properly described, classified and packaged, and is in proper condition for transportation according to applicable regulation.

☒ RCRA EXEMPT:

Oil field wastes generated from oil and gas exploration and production operation and are not mixed with non-exempt waste (R360 Accepts certifications on a per load basis only)

☐ RCRA NON-EXEMPT:

Oil field waste which is non-hazardous that does not exceed the minimum standards for waste hazardous by characteristics established in RCRA regulations, 40 CFR 261.21-261.24, or listed hazardous waste as defined by 40 CFR, part 261, subpart D, as amended. The following documentation demonstrating the waste as non-hazardous is attached. (Check the appropriate items as provided)

Oil field wastes generated from oil and gas exploration and production operation and are not mixed with non-exempt waste (R360 Accepts certifications on a per load basis only)

☐ RCRA NON-EXEMPT:

Oil field waste which is non-hazardous that does not exceed the minimum standards for waste hazardous by characteristics established in RCRA regulations, 40 CFR 261.21-261.24, or listed hazardous waste as defined by 40 CFR, part 261, subpart D, as amended. The following documentation demonstrating the waste as non-hazardous is attached. (Check the appropriate items as provided)

I hereby certify that the above listed material(s), is (are) not hazardous waste as defined by 40 CFR Part 261 or any applicable state law. That each waste has been properly described, classified and packaged, and is in proper condition for transportation according to applicable regulation.

☐ RCRA EXEMPT:

Oil field wastes generated from oil and gas exploration and production operation and are not mixed with non-exempt waste (R360 Accepts certifications on a per load basis only)

☐ RCRA NON-EXEMPT:

Oil field waste which is non-hazardous that does not exceed the minimum standards for waste hazardous by characteristics established in RCRA regulations, 40 CFR 261.21-261.24, or listed hazardous waste as defined by 40 CFR, part 261, subpart D, as amended. The following documentation demonstrating the waste as non-hazardous is attached. (Check the appropriate items as provided)

WASTE GENERATION PROCESS: ☐ DRILLING ☐ COMPLETION ☐ PRODUCTION ☐ GATHERING LINES

## NON-EXEMPT E&amp;P Waste/Service Identification and Amount

All non-exempt E&amp;P waste must be analysed and be below threshold limits for toxicity (TCLP), Ignitability, Corrosivity and Reactivity.

Non-Exempt Other \_\_\_\_\_ \*please select from Non-Exempt Waste List on back

DISPOSAL QUANTITY B - BARRELS L - LIQUID Y - YARDS E - EACH

I hereby certify that the above listed material(s), is (are) not hazardous waste as defined by 40 CFR Part 261 or any applicable state law. That each waste has been properly described, classified and packaged, and is in proper condition for transportation according to applicable regulation.

☐ RCRA EXEMPT:

Oil field wastes generated from oil and gas exploration and production operation and are not mixed with non-exempt waste (R360 Accepts certifications on a per load basis only)

☐ RCRA NON-EXEMPT:

Oil field waste which is non-hazardous that does not exceed the minimum standards for waste hazardous by characteristics established in RCRA regulations, 40 CFR 261.21-261.24, or listed hazardous waste as defined by 40 CFR, part 261, subpart D, as amended. The following documentation demonstrating the waste as non-hazardous is attached. (Check the appropriate items as provided)

☐ MSDS Information☐ RCRA Hazardous Waste Analysis☐ Other (Provide Description Below)☐ EMERGENCY NON-OILFIELD

Emergency non-hazardous, non-oilfield waste that has been ordered by the Department of Public Safety (the order, documentation of non-hazardous waste determination and a description of the waste must accompany this form)

I hereby certify that the above listed material(s), is (are) not hazardous waste as defined by 40 CFR Part 261 or any applicable state law. That each waste has been properly described, classified and packaged, and is in proper condition for transportation according to applicable regulation.

☒ RCRA EXEMPT:

Oil field wastes generated from oil and gas exploration and production operation and are not mixed with non-exempt waste (R360 Accepts certifications on a per load basis only)

☐ RCRA NON-EXEMPT:

Oil field waste which is non-hazardous that does not exceed the minimum standards for waste hazardous by characteristics established in RCRA regulations, 40 CFR 261.21-261.24, or listed hazardous waste as defined by 40 CFR, part 261, subpart D, as amended. The following documentation demonstrating the waste as non-hazardous is attached. (Check the appropriate items as provided)

I hereby certify that the above listed material(s), is (are) not hazardous waste as defined by 40 CFR Part 261 or any applicable state law. That each waste has been properly described, classified and packaged, and is in proper condition for transportation according to applicable regulation.

☒ RCRA EXEMPT:

Oil field wastes generated from oil and gas exploration and production operation and are not mixed with non-exempt waste (R360 Accepts certifications on a per load basis only)

☐ RCRA NON-EXEMPT:

Oil field waste which is non-hazardous that does not exceed the minimum standards for waste hazardous by characteristics established in RCRA regulations, 40 CFR 261.21-261.24, or listed hazardous waste as defined by 40 CFR, part 261, subpart D, as amended. The following documentation demonstrating the waste as non-hazardous is attached. (Check the appropriate items as provided)

I hereby certify that the above listed material(s), is (are) not hazardous waste as defined by 40 CFR Part 261 or any applicable state law. That each waste has been properly described, classified and packaged, and is in proper condition for transportation according to applicable regulation.

☐ RCRA EXEMPT:

Oil field wastes generated from oil and gas exploration and production operation and are not mixed with non-exempt waste (R360 Accepts certifications on a per load basis only)

☐ RCRA NON-EXEMPT:

Oil field waste which is non-hazardous that does not exceed the minimum standards for waste hazardous by characteristics established in RCRA regulations, 40 CFR 261.21-261.24, or listed hazardous waste as defined by 40 CFR, part 261, subpart D, as amended. The following documentation demonstrating the waste as non-hazardous is attached. (Check the appropriate items as provided)

WASTE GENERATION PROCESS: ☐ DRILLING ☐ COMPLETION ☐ PRODUCTION ☐ GATHERING LINES

NON-EXEMPT E&amp;P Waste/Service Identification and Amount

All non-exempt E&amp;P waste must be analysed and be below threshold limits for toxicity (TCLP), Ignitability, Corrosivity and Reactivity.

Non-Exempt Other \_\_\_\_\_

\*please select from Non-Exempt Waste List on back

QUANTITY 2 B-BARRELS 2 Y-YARDS E-EACH

I hereby certify that the above listed material(s), is (are) not hazardous waste as defined by 40 CFR Part 261 or any applicable state law. That each waste has been properly described, classified and packaged, and is in proper condition for transportation according to applicable regulation.

☒ RCRA EXEMPT:

Oil field wastes generated from oil and gas exploration and production operation and are not mixed with non-exempt waste (R360 Accepts certifications on a per load basis only)

☐ RCRA NON-EXEMPT:

Oil field waste which is non-hazardous that does not exceed the minimum standards for waste hazardous by characteristics established in RCRA regulations, 40 CFR 261.21-261.24, or listed hazardous waste as defined by 40 CFR, part 261, subpart D, as amended. The following documentation demonstrating the waste as non-hazardous is attached. (Check the appropriate items as provided)

E-EACH

I hereby certify that the above listed material(s), is (are) not hazardous waste as defined by 40 CFR Part 261 or any applicable state law. That each waste has been properly described, classified and packaged, and is in proper condition for transportation according to applicable regulation.

☒ RCRA EXEMPT:

Oil field wastes generated from oil and gas exploration and production operation and are not mixed with non-exempt waste (R360 Accepts certifications on a per load basis only)

☐ RCRA NON-EXEMPT:

Oil field waste which is non-hazardous that does not exceed the minimum standards for waste hazardous by characteristics established in RCRA regulations, 40 CFR 261.21-261.24, or listed hazardous waste as defined by 40 CFR, part 261, subpart D, as amended. The following documentation demonstrating the waste as non-hazardous is attached. (Check the appropriate items as provided)

QUANTITY B-BARRELS Y-YARDS 20 E-EACH

I hereby certify that the above listed material(s), is (are) not hazardous waste as defined by 40 CFR Part 261 or any applicable state law. That each waste has been properly described, classified and packaged, and is in proper condition for transportation according to applicable regulation.

☐ RCRA EXEMPT:

Oil field wastes generated from oil and gas exploration and production operation and are not mixed with non-exempt waste (R360 Accepts certifications on a per load basis only)

☐ RCRA NON-EXEMPT:

Oil field waste which is non-hazardous that does not exceed the minimum standards for waste hazardous by characteristics established in RCRA regulations, 40 CFR 261.21-261.24, or listed hazardous waste as defined by 40 CFR, part 261, subpart D, as amended. The following documentation demonstrating the waste as non-hazardous is attached. (Check the appropriate items as provided)

I hereby certify that the above listed material(s), is (are) not hazardous waste as defined by 40 CFR Part 261 or any applicable state law. That each waste has been properly described, classified and packaged, and is in proper condition for transportation according to applicable regulation.

☒ RCRA EXEMPT:

Oil field wastes generated from oil and gas exploration and production operation and are not mixed with non-exempt waste (R360 Accepts certifications on a per load basis only)

☐ RCRA NON-EXEMPT:

Oil field waste which is non-hazardous that does not exceed the minimum standards for waste hazardous by characteristics established in RCRA regulations, 40 CFR 261.21-261.24, or listed hazardous waste as defined by 40 CFR, part 261, subpart D, as amended. The following documentation demonstrating the waste as non-hazardous is attached. (Check the appropriate items as provided)

I hereby certify that the above listed material(s), is (are) not hazardous waste as defined by 40 CFR Part 261 or any applicable state law. That each waste has been properly described, classified and packaged, and is in proper condition for transportation according to applicable regulation.

☒ RCRA EXEMPT:

Oil field wastes generated from oil and gas exploration and production operation and are not mixed with non-exempt waste (R360 Accepts certifications on a per load basis only)

☐ RCRA NON-EXEMPT:

Oil field waste which is non-hazardous that does not exceed the minimum standards for waste hazardous by characteristics established in RCRA regulations, 40 CFR 261.21-261.24, or listed hazardous waste as defined by 40 CFR, part 261, subpart D, as amended. The following documentation demonstrating the waste as non-hazardous is attached. (Check the appropriate items as provided)

## Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Qualifiers

GC VOA

| Qualifier | Qualifier Description                                    |
|-----------|----------------------------------------------------------|
| S1-       | Surrogate recovery exceeds control limits, low biased.   |
| S1+       | Surrogate recovery exceeds control limits, high biased.  |
| U         | Indicates the analyte was analyzed for but not detected. |

GC Semi VOA

| Qualifier | Qualifier Description                                    |
|-----------|----------------------------------------------------------|
| *1        | LCS/LCSD RPD exceeds control limits.                     |
| F1        | MS and/or MSD recovery exceeds control limits.           |
| S1+       | Surrogate recovery exceeds control limits, high biased.  |
| U         | Indicates the analyte was analyzed for but not detected. |

HPLC/IC

| Qualifier | Qualifier Description                                    |
|-----------|----------------------------------------------------------|
| F1        | MS and/or MSD recovery exceeds control limits.           |
| U         | Indicates the analyte was analyzed for but not detected. |

## Case Narrative

Client: AECOM  
Project: Amoco CTB

Job ID: 880-46248-1

Job ID: 880-46248-1

Eurofins Midland

**Job Narrative**  
**880-46248-1**

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

**Receipt**

The samples were received on 7/22/2024 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 7.2°C.

**Receipt Exceptions**

The following samples were received and analyzed from an unpreserved bulk soil jar: CSB-034-2.0-20240719 (880-46248-1), CSB-035-2.0-20240719 (880-46248-2), CSB-044-2.0-20240719 (880-46248-3), CSB-045-2.0-20240719 (880-46248-4), CSB-054-2.0-20240719 (880-46248-5), CSB-055-2.0-20240719 (880-46248-6), CSB-036-2.0-20240719 (880-46248-7), CSB-037-2.0-20240719 (880-46248-8), CSB-046-2.0-20240719 (880-46248-9), CSB-047-2.0-20240719 (880-46248-10), CSB-056-2.0-20240719 (880-46248-11), CSB-057-2.0-20240719 (880-46248-12), CSB-065-2.0-20240719 (880-46248-13), CSB-066-2.0-20240719 (880-46248-14), CSB-067-2.0-20240719 (880-46248-15), CSB-074-2.0-20240719 (880-46248-16), CSB-075-2.0-20240719 (880-46248-17), CSB-076-2.0-20240719 (880-46248-18), CSB-084-2.0-20240719 (880-46248-19), CSB-085-2.0-20240719 (880-46248-20), CSB-093-2.0-20240719 (880-46248-21), CSB-094-2.0-20240719 (880-46248-22) and CSB-076-2.0-20240719 (880-46248-23).

**GC VOA**

Method 8021B: The surrogate recovery for the blank associated with preparation batch 880-86249 and analytical batch 880-86224 was outside the upper control limits.

Method 8021B: Surrogate recovery for the following samples were outside control limits: CSB-055-2.0-20240719 (880-46248-6), CSB-036-2.0-20240719 (880-46248-7), CSB-037-2.0-20240719 (880-46248-8), CSB-047-2.0-20240719 (880-46248-10), CSB-057-2.0-20240719 (880-46248-12), CSB-065-2.0-20240719 (880-46248-13) and CSB-067-2.0-20240719 (880-46248-15). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8021B: The surrogate recovery for the blank associated with preparation batch 880-86354 and analytical batch 880-86348 was outside the control limits.

Method 8021B: Surrogate recovery for the following sample was outside control limits: CSB-054-2.0-20240719 (880-46248-5). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

**Diesel Range Organics**

Method 8015MOD\_NM: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-86231 and analytical batch 880-86270 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8015MOD\_NM: The continuing calibration verification (CCV) associated with batch 880-86270 recovered below the lower control limit for Gasoline Range Organics (GRO)-C6-C10 and Diesel Range Organics (Over C10-C28). An acceptable CCV was ran within the 12 hour window, therefore the data has been qualified and reported. The associated sample is impacted: (CCV 880-86270/21).

Method 8015MOD\_NM: Surrogate recovery for the following sample was outside control limits: (LCSD 880-86193/3-A). Evidence of matrix interferences is not obvious.

Eurofins Midland

## Case Narrative

Client: AECOM  
Project: Amoco CTB

Job ID: 880-46248-1

**Job ID: 880-46248-1 (Continued)****Eurofins Midland**

Method 8015MOD\_NM: Surrogate recovery for the following sample was outside control limits: (CCV 880-86226/6). Evidence of matrix interferences is not obvious.

Method 8015MOD\_NM: The continuing calibration verification (CCV) associated with batch 880-86226 recovered above the upper control limit for Diesel Range Organics (Over C10-C28). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8015MOD\_NM: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 880-86193 and analytical batch 880-86226 recovered outside control limits for the following analytes: Diesel Range Organics (Over C10-C28).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

**HPLC/IC**

Method 300\_ORGFM\_28D - Soluble: The Chloride matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-86239 and analytical batch 880-86250 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

The associated samples are: CSB-034-2.0-20240719 (880-46248-1), CSB-035-2.0-20240719 (880-46248-2), CSB-044-2.0-20240719 (880-46248-3), CSB-045-2.0-20240719 (880-46248-4), CSB-054-2.0-20240719 (880-46248-5), CSB-055-2.0-20240719 (880-46248-6), CSB-036-2.0-20240719 (880-46248-7), CSB-037-2.0-20240719 (880-46248-8), CSB-046-2.0-20240719 (880-46248-9), CSB-047-2.0-20240719 (880-46248-10), (880-46248-A-1-C MS) and (880-46248-A-1-D MSD).

Method 300\_ORGFM\_28D - Soluble: The Chloride matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-86285 and analytical batch 880-86293 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

The associated samples are: CSB-093-2.0-20240719 (880-46248-21), CSB-094-2.0-20240719 (880-46248-22), CSB-076-2.0-20240719 (880-46248-23), (880-46248-A-21-D MS) and (880-46248-A-21-E MSD).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Notice: Signature of this document and relinquishment of samples constitutes a valid purchase order from client company to Eurofins Xenco, its affiliates and subcontractors. It assigns standard terms and conditions of service. Eurofins Xenco will be liable only for the cost of samples and shall not assume any responsibility for any losses or expenses incurred by the client if such losses are due to circumstances beyond the control of Eurofins Xenco. A minimum charge of \$85.00 will be applied to each project and a charge of \$5 for each sample submitted to Eurofins Xenco, but not analyzed. These terms will be enforced unless previously negotiated.

# Eurofins Midland

## Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

## Authorization

Qualifiers

GC VOA

| Qualifier | Qualifier Description                                      |
|-----------|------------------------------------------------------------|
| *+        | LCS and/or LCSD is outside acceptance limits, high biased. |
| U         | Indicates the analyte was analyzed for but not detected.   |

GC Semi VOA

| Qualifier | Qualifier Description                                    |
|-----------|----------------------------------------------------------|
| S1+       | Surrogate recovery exceeds control limits, high biased.  |
| U         | Indicates the analyte was analyzed for but not detected. |

HPLC/IC

| Qualifier | Qualifier Description                                    |
|-----------|----------------------------------------------------------|
| U         | Indicates the analyte was analyzed for but not detected. |

Glossary

| Abbreviation   | These commonly used abbreviations may or may not be present in this report.                                 |
|----------------|-------------------------------------------------------------------------------------------------------------|
| ▫              | Listed under the "D" column to designate that the result is reported on a dry weight basis                  |
| %R             | Percent Recovery                                                                                            |
| CFL            | Contains Free Liquid                                                                                        |
| CFU            | Colony Forming Unit                                                                                         |
| CNF            | Contains No Free Liquid                                                                                     |
| DER            | Duplicate Error Ratio (normalized absolute difference)                                                      |
| Dil Fac        | Dilution Factor                                                                                             |
| DL             | Detection Limit (DoD/DOE)                                                                                   |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC            | Decision Level Concentration (Radiochemistry)                                                               |
| EDL            | Estimated Detection Limit (Dioxin)                                                                          |
| LOD            | Limit of Detection (DoD/DOE)                                                                                |
| LOQ            | Limit of Quantitation (DoD/DOE)                                                                             |
| MCL            | EPA recommended "Maximum Contaminant Level"                                                                 |
| MDA            | Minimum Detectable Activity (Radiochemistry)                                                                |
| MDC            | Minimum Detectable Concentration (Radiochemistry)                                                           |
| MDL            | Method Detection Limit                                                                                      |
| ML             | Minimum Level (Dioxin)                                                                                      |
| MPN            | Most Probable Number                                                                                        |
| MQL            | Method Quantitation Limit                                                                                   |
| NC             | Not Calculated                                                                                              |
| ND             | Not Detected at the reporting limit (or MDL or EDL if shown)                                                |
| NEG            | Negative / Absent                                                                                           |
| POS            | Positive / Present                                                                                          |
| PQL            | Practical Quantitation Limit                                                                                |
| PRES           | Presumptive                                                                                                 |
| QC             | Quality Control                                                                                             |
| RER            | Relative Error Ratio (Radiochemistry)                                                                       |
| RL             | Reporting Limit or Requested Limit (Radiochemistry)                                                         |
| RPD            | Relative Percent Difference, a measure of the relative difference between two points                        |
| TEF            | Toxicity Equivalent Factor (Dioxin)                                                                         |
| TEQ            | Toxicity Equivalent Quotient (Dioxin)                                                                       |
| TNTC           | Too Numerous To Count                                                                                       |

## Case Narrative

Client: AECOM  
Project: Amoco CTB

Job ID: 880-46398-1

**Job ID: 880-46398-1**

**Eurofins Midland**

### Job Narrative 880-46398-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

#### Receipt

The samples were received on 7/24/2024 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.3°C.

#### Receipt Exceptions

The following samples were received and analyzed from an unpreserved bulk soil jar: CSB-033-2.0-20240723 (880-46398-1), CSB-043-2.0-20240723 (880-46398-2), CSB-053-2.0-20240723 (880-46398-3), CSB-064-2.0-20240723 (880-46398-4) and CSB-073-2.0-20240723 (880-46398-5).

#### GC VOA

Method 8021B: The laboratory control sample (LCS) associated with preparation batch 880-86428 and analytical batch 880-86450 was outside acceptance criteria. Re-extraction and/or re-analysis could not be performed; therefore, the data have been reported. The batch matrix spike/matrix spike duplicate (MS/MSD) was within acceptance limits and may be used to evaluate matrix performance.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

#### Diesel Range Organics

Method 8015MOD\_NM: The surrogate recovery for the blank associated with preparation batch 880-86400 and analytical batch 880-86530 was outside the upper control limits.

Method 8015MOD\_NM: An incorrect volume of surrogate spiking solution was inadvertently added the following samples: CSB-064-2.0-20240723 (880-46398-4). Percent recoveries are based on the amount spiked.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

#### HPLC/IC

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Eurofins Midland

## Client Sample Results

(Notice: Signature of this document and relinquishment of samples constitutes a valid purchase order from client company to Eurofins Xenco, its affiliates and subcontractors. It assigns standard terms and conditions of service. Eurofins Xenco will be liable only for the cost of samples and shall not assume any responsibility for any losses or expenses incurred by the client if such losses are due to circumstances beyond the control of Eurofins Xenco. A minimum charge of \$85.00 will be applied to each project and a charge of \$5 for each sample submitted to Eurofins Xenco, but not analyzed. These terms will be enforced unless previously negotiated.)

| Question                                                                         | Answer | Comment |
|----------------------------------------------------------------------------------|--------|---------|
| The cooler's custody seal, if present, is intact.                                | N/A    |         |
| Sample custody seals, if present, are intact.                                    | N/A    |         |
| The cooler or samples do not appear to have been compromised or tampered with.   | True   |         |
| Samples were received on ice.                                                    | True   |         |
| Cooler Temperature is acceptable.                                                | True   |         |
| Cooler Temperature is recorded.                                                  | True   |         |
| COC is present.                                                                  | True   |         |
| COC is filled out in ink and legible.                                            | True   |         |
| COC is filled out with all pertinent information.                                | True   |         |
| Is the Field Sampler's name present on COC?                                      | True   |         |
| There are no discrepancies between the containers received and the COC.          | True   |         |
| Samples are received within Holding Time (excluding tests with immediate HTs)    | True   |         |
| Sample containers have legible labels.                                           | True   |         |
| Containers are not broken or leaking.                                            | True   |         |
| Sample collection date/times are provided.                                       | True   |         |
| Appropriate sample containers are used.                                          | True   |         |
| Sample bottles are completely filled.                                            | True   |         |
| Sample Preservation Verified.                                                    | N/A    |         |
| There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs | True   |         |
| Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").  | N/A    |         |

# ANALYTICAL REPORT

## PREPARED FOR

Attn: Brad Wynne  
AECOM  
13355 Noel Road  
Suite 400  
Dallas, Texas 75240

Generated 7/26/2024 8:48:45 AM

## JOB DESCRIPTION

Amoco CTB  
Loving, NM

## JOB NUMBER

880-46455-1

Eurofins Midland  
1211 W. Florida Ave  
Midland TX 79701

# Eurofins Midland

## Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

## Authorization

Job Narrative  
880-46455-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 7/25/2024 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.3°C.

HPLC/IC

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Eurofins Midland

## Client Sample Results

Client: AECOM  
Project/Site: Amoco CTB

Job ID: 880-46455-1  
SDG: Loving, NM

Client Sample ID: CSB-034-3.0-20240724

Lab Sample ID: 880-46455-1

Date Collected: 07/24/24 13:00

Matrix: Solid

Date Received: 07/25/24 08:00

## Method: EPA 300.0 - Anions, Ion Chromatography - Soluble

| Analyte  | Result | Qualifier | RL   | Unit  | D | Prepared | Analyzed       | Dil Fac |
|----------|--------|-----------|------|-------|---|----------|----------------|---------|
| Chloride | 502    |           | 4.96 | mg/Kg |   |          | 07/25/24 18:38 | 1       |

Client Sample ID: CSB-035-3.0-20240724

Lab Sample ID: 880-46455-2

Date Collected: 07/24/24 13:10

Matrix: Solid

Date Received: 07/25/24 08:00

## Method: EPA 300.0 - Anions, Ion Chromatography - Soluble

| Analyte  | Result | Qualifier | RL   | Unit  | D | Prepared | Analyzed       | Dil Fac |
|----------|--------|-----------|------|-------|---|----------|----------------|---------|
| Chloride | 291    |           | 5.02 | mg/Kg |   |          | 07/25/24 19:02 | 1       |

Client Sample ID: CSB-036-3.0-20240724

Notes: Signature of this document and relinquishment of samples constitutes a valid purchase order from client company to Eurofins Xenco, its affiliates and subcontractors. It assigns standard terms and conditions of service. Eurofins Xenco will be liable only for the cost of samples and shall not assume any responsibility for any losses or expenses incurred by the client if such losses are due to circumstances beyond the control of Eurofins Xenco. A minimum charge of \$85.00 will be applied to each project and a charge of \$5 for each sample submitted to Eurofins Xenco, but not analyzed. These terms will be enforced unless previously negotiated.

Notice: Signature of this document and relinquishment of samples constitutes a valid purchase order from client company to Eurofins Xeno, its affiliates and subcontractors. It assigns standard terms and conditions of service. Eurofins Xeno will be liable only for the cost of samples and shall not assume any responsibility for any losses or expenses incurred by the client if such losses are due to circumstances beyond the control of Eurofins Xeno. A minimum charge of \$85.00 will be applied to each profile and a charge of \$3 for each sample submitted to Eurofins Xeno, but not analyzed. These terms will be enforced unless previously negotiated.

| Question                                                                         | Answer | Comment |
|----------------------------------------------------------------------------------|--------|---------|
| The cooler's custody seal, if present, is intact.                                | N/A    |         |
| Sample custody seals, if present, are intact.                                    | N/A    |         |
| The cooler or samples do not appear to have been compromised or tampered with.   | True   |         |
| Samples were received on ice.                                                    | True   |         |
| Cooler Temperature is acceptable.                                                | True   |         |
| Cooler Temperature is recorded.                                                  | True   |         |
| COC is present.                                                                  | True   |         |
| COC is filled out in ink and legible.                                            | True   |         |
| COC is filled out with all pertinent information.                                | True   |         |
| Is the Field Sampler's name present on COC?                                      | True   |         |
| There are no discrepancies between the containers received and the COC.          | True   |         |
| Samples are received within Holding Time (excluding tests with immediate HTs)    | True   |         |
| Sample containers have legible labels.                                           | True   |         |
| Containers are not broken or leaking.                                            | True   |         |
| Sample collection date/times are provided.                                       | True   |         |
| Appropriate sample containers are used.                                          | True   |         |
| Sample bottles are completely filled.                                            | True   |         |
| Sample Preservation Verified.                                                    | N/A    |         |
| There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs | True   |         |
| Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").  | N/A    |         |

# ANALYTICAL REPORT

## PREPARED FOR

Attn: Brad Wynne  
AECOM  
13355 Noel Road  
Suite 400  
Dallas, Texas 75240

Generated 7/30/2024 8:28:36 AM

## JOB DESCRIPTION

Amoco CTB  
Loving, NM

## JOB NUMBER

880-46548-1

Eurofins Midland  
1211 W. Florida Ave  
Midland TX 79701

# Eurofins Midland

## Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

## Authorization

Generated  
7/30/2024 8:28:36 AM

Authorized for release by  
Jessica Kramer, Project Manager

Qualifiers

HPLC/IC

| Qualifier | Qualifier Description                                    |
|-----------|----------------------------------------------------------|
| F1        | MS and/or MSD recovery exceeds control limits.           |
| U         | Indicates the analyte was analyzed for but not detected. |

Glossary

| Abbreviation   | These commonly used abbreviations may or may not be present in this report.                                 |
|----------------|-------------------------------------------------------------------------------------------------------------|
| α              | Listed under the "D" column to designate that the result is reported on a dry weight basis                  |
| %R             | Percent Recovery                                                                                            |
| CFL            | Contains Free Liquid                                                                                        |
| CFU            | Colony Forming Unit                                                                                         |
| CNF            | Contains No Free Liquid                                                                                     |
| DER            | Duplicate Error Ratio (normalized absolute difference)                                                      |
| Dil Fac        | Dilution Factor                                                                                             |
| DL             | Detection Limit (DoD/DOE)                                                                                   |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC            | Decision Level Concentration (Radiochemistry)                                                               |
| EDL            | Estimated Detection Limit (Dioxin)                                                                          |
| LOD            | Limit of Detection (DoD/DOE)                                                                                |
| LOQ            | Limit of Quantitation (DoD/DOE)                                                                             |
| MCL            | EPA recommended "Maximum Contaminant Level"                                                                 |
| MDA            | Minimum Detectable Activity (Radiochemistry)                                                                |
| MDC            | Minimum Detectable Concentration (Radiochemistry)                                                           |
| MDL            | Method Detection Limit                                                                                      |
| ML             | Minimum Level (Dioxin)                                                                                      |
| MPN            | Most Probable Number                                                                                        |
| MQL            | Method Quantitation Limit                                                                                   |
| NC             | Not Calculated                                                                                              |
| ND             | Not Detected at the reporting limit (or MDL or EDL if shown)                                                |
| NEG            | Negative / Absent                                                                                           |

## Case Narrative

Client: AECOM  
Project: Amoco CTB

Job ID: 880-46548-1

Job ID: 880-46548-1

Eurofins Midland

**Job Narrative**  
**880-46548-1**

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

**Receipt**

The samples were received on 7/29/2024 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 5.5°C.

**Receipt Exceptions**

The following samples were received and analyzed from an unpreserved bulk soil jar: CSB-023-3.0-20240726 (880-46548-1), CSB-024-3.0-20240726 (880-46548-2), CSB-025-3.0-20240726 (880-46548-3), CSB-026-3.0-20240726 (880-46548-4), CSB-027-3.0-20240726 (880-46548-5), CSB-033-3.0-20240726 (880-46548-6), CSB-043-3.0-20240726 (880-46548-7), CSB-053-3.0-20240726 (880-46548-8), CSB-073-3.0-20240726 (880-46548-9), CSB-094-4.0-20240726 (880-46548-10), CSB-083-3.0-20240726 (880-46548-11), CSB-092-3.0-20240726 (880-46548-12), CSB-100-3.0-20240726 (880-46548-13), CSB-101-3.0-20240726 (880-46548-14), CSB-102-3.0-20240726 (880-46548-15) and CSB-083-DUP-3.0-20240726 (880-46548-16).

**HPLC/IC**

Method 300\_ORGFM\_28D - Soluble: The Chloride matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-86876 and analytical batch 880-86877 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

CSB-083-3.0-20240726 (880-46548-11), CSB-092-3.0-20240726 (880-46548-12), CSB-100-3.0-20240726 (880-46548-13), CSB-101-3.0-20240726 (880-46548-14), CSB-102-3.0-20240726 (880-46548-15), CSB-083-DUP-3.0-20240726 (880-46548-16), (880-46548-A-11-G MS) and (880-46548-A-11-F MSD)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

| <p>Notice: Signature of this document and milliquantification of samples constitutes a valid purchase order from client company to Eurofins Xenocon, its affiliates and subcontractors. It assigns standard terms and conditions of service. Eurofins Xenocon will be liable only for the cost of samples and shall not assume any responsibility for any losses or expenses incurred by the client if such losses are due to circumstances beyond the control of Eurofins Xenocon. A minimum charge of \$86.00 will be applied to each project and a charge of \$5 for each sample submitted to Eurofins Xenocon, but not analyzed. These terms will be enforced unless previously negotiated.</p> |              |               |             |       |          |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |   |    |    |                  |    |    |    |    |   |   |    |

Notes: Signature of this document and relinquishment of samples constitutes a valid purchase order from client company to Eurofins Xenco, its affiliates and subcontractors. It assigns standard terms and conditions of service. Eurofins Xenco will be liable only for the cost of samples and shall not assume any responsibility for any losses or expenses incurred by the client if such losses are due to circumstances beyond the control of Eurofins Xenco. A minimum charge of \$85.00 will be applied to each project and a charge of \$5 for each sample submitted to Eurofins Xenco, but not analyzed. These terms will be enforced unless previously negotiated.

| Question                                                                         | Answer | Comment |
|----------------------------------------------------------------------------------|--------|---------|
| The cooler's custody seal, if present, is intact.                                | N/A    |         |
| Sample custody seals, if present, are intact.                                    | N/A    |         |
| The cooler or samples do not appear to have been compromised or tampered with.   | True   |         |
| Samples were received on ice.                                                    | True   |         |
| Cooler Temperature is acceptable.                                                | True   |         |
| Cooler Temperature is recorded.                                                  | True   |         |
| COC is present.                                                                  | True   |         |
| COC is filled out in ink and legible.                                            | True   |         |
| COC is filled out with all pertinent information.                                | True   |         |
| Is the Field Sampler's name present on COC?                                      | True   |         |
| There are no discrepancies between the containers received and the COC.          | True   |         |
| Samples are received within Holding Time (excluding tests with immediate HTs)    | True   |         |
| Sample containers have legible labels.                                           | True   |         |
| Containers are not broken or leaking.                                            | True   |         |
| Sample collection date/times are provided.                                       | True   |         |
| Appropriate sample containers are used.                                          | True   |         |
| Sample bottles are completely filled.                                            | True   |         |
| Sample Preservation Verified.                                                    | N/A    |         |
| There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs | True   |         |
| Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").  | N/A    |         |

# ANALYTICAL REPORT

## PREPARED FOR

Attn: Brad Wynne  
AECOM  
13355 Noel Road  
Suite 400  
Dallas, Texas 75240

Generated 7/31/2024 9:58:32 AM

## JOB DESCRIPTION

Amoco CTB  
Loving, NM

## JOB NUMBER

880-46548-2

Eurofins Midland  
1211 W. Florida Ave  
Midland TX 79701

# Eurofins Midland

## Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

## Authorization

Generated

Qualifiers

GC VOA

| Qualifier | Qualifier Description                                    |
|-----------|----------------------------------------------------------|
| U         | Indicates the analyte was analyzed for but not detected. |

GC Semi VOA

| Qualifier | Qualifier Description                                      |
|-----------|------------------------------------------------------------|
| *+        | LCS and/or LCSD is outside acceptance limits, high biased. |
| *1        | LCS/LCSD RPD exceeds control limits.                       |
| S1-       | Surrogate recovery exceeds control limits, low biased.     |
| S1+       | Surrogate recovery exceeds control limits, high biased.    |
| U         | Indicates the analyte was analyzed for but not detected.   |

Glossary

| Abbreviation   | These commonly used abbreviations may or may not be present in this report.                                 |
|----------------|-------------------------------------------------------------------------------------------------------------|
| α              | Listed under the "D" column to designate that the result is reported on a dry weight basis                  |
| %R             | Percent Recovery                                                                                            |
| CFL            | Contains Free Liquid                                                                                        |
| CFU            | Colony Forming Unit                                                                                         |
| CNF            | Contains No Free Liquid                                                                                     |
| DER            | Duplicate Error Ratio (normalized absolute difference)                                                      |
| Dil Fac        | Dilution Factor                                                                                             |
| DL             | Detection Limit (DoD/DOE)                                                                                   |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC            | Decision Level Concentration (Radiochemistry)                                                               |
| EDL            | Estimated Detection Limit (Dioxin)                                                                          |
| LOD            | Limit of Detection (DoD/DOE)                                                                                |
| LOQ            | Limit of Quantitation (DoD/DOE)                                                                             |
| MCL            | EPA recommended "Maximum Contaminant Level"                                                                 |
| MDA            | Minimum Detectable Activity (Radiochemistry)                                                                |
| MDC            | Minimum Detectable Concentration (Radiochemistry)                                                           |
| MDL            | Method Detection Limit                                                                                      |
| ML             | Minimum Level (Dioxin)                                                                                      |
| MPN            | Most Probable Number                                                                                        |
| MQL            | Method Quantitation Limit                                                                                   |
| NC             | Not Calculated                                                                                              |
| ND             | Not Detected at the reporting limit (or MDL or EDL if shown)                                                |
| NEG            | Negative / Absent                                                                                           |
| POS            | Positive / Present                                                                                          |

## Case Narrative

Client: AECOM  
Project: Amoco CTB

Job ID: 880-46548-2

Job ID: 880-46548-2

Eurofins Midland

**Job Narrative**  
**880-46548-2**

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

**Receipt**

The samples were received on 7/29/2024 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 5.5°C.

**Receipt Exceptions**

The following samples were received and analyzed from an unpreserved bulk soil jar: CSB-023-3.0-20240726 (880-46548-1), CSB-024-3.0-20240726 (880-46548-2), CSB-025-3.0-20240726 (880-46548-3), CSB-026-3.0-20240726 (880-46548-4), CSB-027-3.0-20240726 (880-46548-5), CSB-033-3.0-20240726 (880-46548-6), CSB-043-3.0-20240726 (880-46548-7), CSB-053-3.0-20240726 (880-46548-8), CSB-073-3.0-20240726 (880-46548-9), CSB-094-4.0-20240726 (880-46548-10), CSB-083-3.0-20240726 (880-46548-11), CSB-092-3.0-20240726 (880-46548-12), CSB-100-3.0-20240726 (880-46548-13), CSB-101-3.0-20240726 (880-46548-14), CSB-102-3.0-20240726 (880-46548-15) and CSB-083-DUP-3.0-20240726 (880-46548-16).

**GC VOA**

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

**Diesel Range Organics**

Method 8015MOD\_NM: The laboratory control sample (LCS) associated with preparation batch 880-86878 and analytical batch 880-86943 was outside acceptance criteria. Re-extraction and/or re-analysis could not be performed; therefore, the data have been reported. The batch matrix spike/matrix spike duplicate (MS/MSD) was within acceptance limits and may be used to evaluate matrix performance.

Method 8015MOD\_NM: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 880-86878 and analytical batch 880-86943 recovered outside control limits for the following analytes: Gasoline Range Organics (GRO)-C6-C10 and Diesel Range Organics (Over C10-C28).

Method 8015MOD\_NM: The CCV was biased high for both gasoline and diesel analyte ranges. Another CCV was acceptable within the method determined 12 hour window; therefore the data was qualified and reported.

(CCV 880-86943/19)

Method 8015MOD\_NM: Surrogate recovery for the following samples were outside control limits: CSB-025-3.0-20240726 (880-46548-3), CSB-027-3.0-20240726 (880-46548-5) and (MB 880-86878/1-A). Evidence of matrix interferences is not obvious.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.
