**UPSET FLARING EVENT SPECIFIC JUSTIFICATIONS FORM****Facility Id#** fAPP2126659618**Facility:** Mesa Verde 18 CTB**Duration of Event:** 30 Minutes**Start Time:** 09:00 AM**Cause:** Emergency Flare > Planned Maintenance**Method of Flared Gas Measurement:** Allocated Vent Calculation**Operator:** OXY USA, Inc.**Flare Date:** 08/18/2026**MCF Flared:** 74**End Time:** 09:30 AM

1. Reason why this event was beyond Operator's control:

In this instance, a scheduled well tubing integrity test was conducted to evaluate the condition of the tubing and verify the safety and reliability of the well, ensuring there were no leaks present. The vented amount was limited because the tube was not fully depressurized to zero, in order to minimize venting. This event transpired outside of OXY's control; however, OXY has comprehensive strategies to effectively manage and minimize emissions to the fullest extent possible.

2. Steps Taken to limit duration and magnitude of venting or flaring:

In this instance, a scheduled well tubing integrity test was conducted to evaluate the condition of the tubing and verify the safety and reliability of the well, ensuring there were no leaks present. The vented amount was limited because the tube was not fully depressurized to zero, in order to minimize venting.

3. Corrective Actions taken to eliminate the cause and reoccurrence of venting or flaring:

No corrective actions are needed to prevent venting during a well tubing integrity test, as venting is essential for removing trapped air or gas from the tube. This ensures accurate pressure readings for leak detection, prevents over-pressurizing the tube casing, and allows for safe release of pressure after testing.
