Introduction

Standard Safety and Supply (Standard) on behalf of ET Gathering & Processing LLC (Energy Transfer) is pleased to submit this Site Characterization, Remediation Closure Request, & Reclamation Report.

Based on the Notification of Release, for nOY1730036268, the spill was discovered on October 18th, 2017, and was attributed to a pipeline failure. There was an approximate net loss of eighteen (18) bbls of condensate. Attachment B: Figure 1 depicts the Site with respect to the nearest town and Figure 2 depicts the topographic features in the area.

Site Characterization

Based on a site characterization desktop review the area is within a Low Karst area. There are no known water wells within a half mile radius of the site. The depth to groundwater of the site is estimated to be between one hundred (100) to five hundred (500) ft below ground surface (bgs). Additionally, there are no other receptors [significant watercourse, lakebed, playa, sinkhole, an occupied residence, school, hospital, institution, church, municipal water boundary, wetland, subsurface mine, and/or an unstable area] within the specified distance set forth in the New Mexico Administrative Code 19.15.29.12. Based on the site characterization the following closure criteria will be utilized:

	NMAC Closure Criteria Remediation and Reclamation				
depths in feet (ft)	Benzene	BTEX	TPH (GRO-DRO)	TPH (GRO-DRO-MRO)	Chloride
0-Max depth (ft)	10 mg/kg	50mg/kg	---*	100 mg/kg	600 mg/kg
* value must not exceed TPH (GRO-DRO-MRO) value

The soils surrounding the site are characterized as Kimbrough gravelly loam, dry, 0 to 3 percent slopes.

The documentation used to characterize the site can be found in the report under Attachment C: Site Characterization.

Initial Assessment

On May 18, 2026, Standard performed an initial assessment to characterize impacts associated with nOY1730036268. Seven (7) test pits (TP-2 to TP-6, NW-1 and EW) were installed, and soil samples were collected from surface (0) to four and a half (4.5) ft bgs in half foot intervals. Soil samples collected were jarred, placed on ice, and the remaining material was field screened for soil contamination. Soil samples were delivered to Cardinal Laboratories in Hobbs, New Mexico for the analysis of benzene, toluene, ethylbenzene, and xylenes (BTEX by 8021B), total petroleum hydrocarbons (TPH by 8015M) and chlorides (4500-CL B). Analytical results indicated chloride and TPH impacts in TP-3 and EW at surface to half a foot (0.5) ft bgs above allowable limits.

On June 5, 2026, Standard returned to the site to investigate potential impacts north & east of the pad. A total of seven (7) vertical delineation sample points (V-1 to V-7) were collected starting from surface (0) to half a foot (0.5) ft bgs. Samples were delivered to Cardinal for the analysis of BTEX, TPH, and chloride. Analytical results indicated that no impacts were present.

The delineation data and excavation sampling data can be found in this report under Attachment A: Table 1 Delineation Assessment Analytical Data Table, and the lab report and chain of custody can be found under Attachment E: Laboratory Analytical Method Documentation with Chain-of-Custody

The sample locations are located under Attachment B: Figure 3 Delineation Assessment Map while photographs of the impacted area are under Attachment D: Photographic Log.

Remedial Actions Activities and Confirmation Sampling

Standard began remedial actions at the Site on May 20th, 2026, to remove the impacted soils identified in previous delineation efforts. Furthermore, reclamation activities occurred concurrently, and all surface caliche was removed down to the native material. The excavation depth across the entire pad was approximately one (1) ft bgs.

On June 5, 2026, Standard was onsite to perform a confirmation sampling event where nineteen (19) base samples (CS-1 to CS-19) were collected. Soil samples were jarred in lab provided containers, placed on ice then transported under proper chain-of-custody to Cardinal Laboratories in Hobbs, New Mexico for the analysis of BTEX, TPH, and chloride. Analytical results indicated that three (3) samples (CS-8, CS-10, and CS-14) exhibited TPH and/or chloride concentrations above NMOCD closure criteria. All other samples were below NMOCD closure criteria for the Site.

On June 17, 2026, after further excavation was completed, Standard was onsite to perform a confirmation sampling event where three (3) base samples (CS-8, CS-10, and CS-14) and two (2) sidewall samples (SW-1 and SW-2) were collected. Additionally, two (2) backfill samples (BF-1 and BF-2) were collected at a local backfill pit. All soil samples were jarred in lab provided containers, placed on ice then transported under proper chain-of-custody to Cardinal Laboratories in Hobbs, New Mexico for the analysis of BTEX, TPH, and chloride. Analytical results indicated that all samples were below NMOCD closure criteria for the site.

Between July 16 and July 21 to July 23, 2026, Standard was onsite to conduct a confirmation sampling event in the pasture where two thousand six hundred twenty two (2,622) samples (CS-1 to CS-2,622) were collected. Samples were delivered to Cardinal laboratories for the analysis of BTEX, TPH, and chloride. Analytical results indicated that all samples were below the closure criteria for the site.

Soil samples were collected as a five-point composite and represented an area no greater than 200 square feet. There was one thousand and five hundred and fifty five (1,555) cubic yards of impacted material that was excavated and transported to the closest approved disposal facility.

The confirmation sampling data can be found in this report under Attachment A: Table 2 Confirmation Sampling Analytical Data Table, Table 3 Pasture Confirmation Sampling Analytical Data Table and the lab report and chain of custody can be found under Attachment E: Laboratory Analytical Method Documentation with Chain-of-Custody. The confirmation sample locations are located under Attachment B: Figure 4 Confirmation Sampling Map while photographs of the excavation area are under Attachment D: Photographic Log.

Reclamation Activities

Per 19.15.29.13 (D) NMAC, once remediation activities were concluded, the excavation was backfilled with proven non-waste containing earthen material, matching the local lithology. All ancillary equipment that was present on site was removed. The areas subjected to reclamation were the entire pad and access road. Two areas south of the pad were not

reclaimed at this time due to the active risers within the vicinity. On June 25, 2026, Standard was onsite to conduct reclamation and reseeding activities in all areas disturbed by remediation and reclamation activities. A dozer was utilized to prepare the seedbed. Furrows were installed perpendicular to the natural gradient of the site as the primary form of erosion control. A tractor with a seed drill box was utilized to reseed the site with BLM Seed mix #3 Shallow.

The extent of reclamation activities can be seen under Attachment B: Figure 5 Reclamation Map.

When revegetation efforts meet NMOCD approval for administrative site release, a final Revegetation Report will be submitted.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:20,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service

Web Soil Survey URL:

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Lea County, New Mexico

Survey Area Data: Version 22, Sep 9, 2025

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Feb 7, 2020—May 12, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.
