JUST TO KEEP YOU UPDATED ON THE 19 30 24 1 J

WE RIGGED UP ON THE WELL, SET BLANKING PLUG IN THE PACKER AND WERE ABLE TO BLEED DOWN THE TUBING BUT THE CASING WILL NOT BLEED DOWN INDICATING AN ISSUE WITH THE PACKER . BECAUSE THE RELATIVE HIGH PRESSURE ~ 500 PSIG AND THE FACT THE WELL DOES MAKE PRODUCTION BUT A TON OF WATER WE DECIDE TO RIG DOWN AND COME BACK TO IT LATER THIS SUMMER WHEN WE WILL HAVE AN OPTION TO ACTUALLY PRODUCE THE WELL BUT KNOW OFF MOST OF THE WATER AT THE WELLHEAD.

THIS IS THE WELL THAT SHOWED PRESSURE ON THE ANNULUS WHEN WE RECORDER THE ANNUAL PRESSURE IN ORDER TO EXTEND THE TA STATUS .

WITH TAKING OVER WBDU WE NOW HAVE ADDITIONAL SOURCES FROM WHICH WE CAN GET PRESSURE DATA THEREFORE WE PLAN TO TA WELL WITH PLUG.

THANK YOU
