	NORT	HWEST NEWMEXICO	PACKER LEAKAGE	E TEST INSTRUCTIO	NS			
<ol> <li>A packer leakage test shall be comm completion of the well, and annually ther Such tests shall also be commenced on al chemical or fracture treatment, and when the tubing have been disturbed. Tests shall be the tubing have been disturbed.</li> </ol>	eafter as prescribed by the order author l multiple completions within seven day ever remedial work has been done on a	izing the multiple completion s following recompletion an well during which the packe	n. for Flow Tes d/or remain shut- r or	st No. 2 is to be the same a	ed even though no leak was indicated during Flow Test No. 1. Procedure as for Flow Test No. 1 except that the previously produced zone shall as previously shut-in is produced.			
<ol> <li>At least 72 hours prior to the comm Division in writing of the exact time the t</li> </ol>			intervals as f intervals dur immediately flow period, to the conclu	follows: 3 hours tests: imm ing the first hour thereof, a prior to the conclusion of at least one time during ea usion of each flow period.	be measured on each zone with a deadweight pressure gauge at time aediately prior to the beginning of each flow period, at fifteen-minute and at hourly intervals thereafter, including one pressure measurement each flow period. 7-day tests: immediately prior to the beginning of each ach flow period (at approximately the midway point) and immediately prior Other pressures may be taken as desired, or may be requested on wells			
3. The packer leakage test shall commence when both zones of the dual completion are shut-in for pressure stabilization. Both zones shall remain shut-in until the well-head pressure in each has stabilized, provided however, that they need not remain shut-in more than seven days.				which have previously shown questionable test data. 24-hour oil zone tests: all pressures, throughout the entire test, shall be continuously measured and recorded with recording pressure gauges the accuracy of which must be checked at least twice, once at the beginning and once at the end of each test, with a deadweight pressure gauge. If a well is a gas-oil or an oil-gas dual completion, the recording gauge shall be required on the oil zone only, with deadweight pressures as required above being taken on the gas zone.				
4. For Flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shut-in. Such test shall be continued for seven days in the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial packer leakage test, a gas well is being flowed to the atmosphere due to lack of a pipeline connection the flow period shall be three hours.				e filed with the Aztec Distr Packer Leakage Test For	d tests shall be filed in triplicate within 15 days after completion of the test. rict Office of the New Mexico Oil Conservation Division on Northwest m Revised 10-01-78 with all deadweight pressures indicated thereon as zones only) and gravity and GOR (oil zones only).			
5. Following completion of Flow Test above.	No. 1, the well shall again be shut-in, ir	accordance with Paragraph	3
