	NORT	THWEST NEWMEXICO	PACKER LEAKAGE	E TEST INSTRUCTIO	NS			
 A packer leakage test shall be com completion of the well, and annually the 					ed even though no leak was indicated during Flow Test No. 1. Procedure as for Flow Test No. 1 except that the previously produced zone shall			
Such tests shall also be commenced on a chemical or fracture treatment, and whe	all multiple completions within seven day never remedial work has been done on a	ys following recompletion and a well during which the packet	d/or remain shut- r or		as previously shut-in is produced.			
the tubing have been disturbed. Tests sl requested by the Division.	hall also be taken at any time that comm	unication is suspected or whe	Pressur		be measured on each zone with a deadweight pressure gauge at time ediately prior to the beginning of each flow period, at fifteen-minute			
2. At least 72 hours prior to the comm			intervals dur immediately	ring the first hour thereof, a prior to the conclusion of	and at hourly intervals thereafter, including one pressure measurement each flow period. 7-day tests: immediately prior to the beginning of each the flow period (at approximately the midway point) and immediately prior			
Division in writing of the exact time the	test is to be commenced. Offset operat	ors shall also be so notified.	to the conclu- which have j	usion of each flow period. previously shown question	Other pressures may be taken as desired, or may be requested on wells able test data.			
 The packer leakage test shall comm stabilization. Both zones shall remain sh however, that they need not remain shut 	nut-in until the well-head pressure in eac		e with recordi once at the e completion,	ing pressure gauges the acc end of each test, with a dea	es, throughout the entire test, shall be continuously measured and recorded uracy of which must be checked at least twice, once at the beginning and dweight pressure gauge. If a well is a gas-oil or an oil-gas dual be required on the oil zone only, with deadweight pressures as required			
4. For Flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shut-in. Such test shall be continued for seven days in the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial packer leakage test, a gas well is being flowed to the atmosphere due to lack of a pipeline connection the flow period shall be three hours.				shall be filed with the Azteo New Mexico Packer Leaka	d tests shall be filed in triplicate within 15 days after completion of the District Office of the New Mexico Oil Conservation Division on ge Test Form Revised 10-01-78 with all deadweight pressures indicated tures (gas zones only) and gravity and GOR (oil zones only).			
5. Following completion of Flow Test above.	t No. 1, the well shall again be shut-in, i	n accordance with Paragraph	3
