Northwest New Mexico Packer-Leakage Test

Flow Test No. 2 Commenced at: Zone Producing (Upper or Lower) Time Lapsed Time PRESSURE Prod Zone (date/time) Since* Temperature Remarks Upper zone Lower zone Production rate during test Oil: BOPD Based on: Bbls. In Hrs. Grav. GOR Gas MCFPD; Test thru (Orifice or Meter) Remarks: packer test only one producing zone. Flowed non- producing zone (PC) through the seperator to the pit. Flowed for one hour. Shut in the PC and turned the MV to sale. Witnessed by Jason Sandoval, Jicarilla oil and gas representative. I hereby certify that the information herein contained is true and complete to the best of my knowledge. Approved: 20 Operator: Hilcorp Energy Company New Mexico Oil Conservation Division By: Allen Sadahiro By: Title: Multi-Skilled Operator Date: Tuesday, August 3, 2021 Title: NORTHWEST NEWMEXICO PACKER LEAKAGE TEST INSTRUCTIONS A packer leakage test shall be commenced on each multiply completed well within seven days after actual Flow Test No. 2 shall be conducted even though no leak was indicated during Flow Test No. 1. Procedure completion of the well, and annually thereafter as prescribed by the order authorizing the multiple completion. for Flow Test No. 2 is to be the same as for Flow Test No. 1 except that the previously produced zone shall Such tests shall also be commenced on all multiple completions within seven days following recompletion and/or remain shut-in while the zone which was previously shut-in is produced. chemical or fracture treatment, and whenever remedial work has been done on a well during which the packer or the tubing have been disturbed. Tests shall also be taken at any time that communication is suspected or when requested by the Division. 7. Pressures for gas-zone tests must be measured on each zone with a deadweight pressure gauge at time intervals as follows: 3 hours tests: immediately prior to the beginning of each flow period, at fifteen-minute intervals during the first hour thereof, and at hourly intervals thereafter, including one pressure measurement immediately prior to the conclusion of each flow period. 7-day tests: immediately prior to the beginning of each At least 72 hours prior to the commencement of any packer leakage test, the operator shall notify the flow period, at least one time during each flow period (at approximately the midway point) and immediately prior to the conclusion of each flow period. Other pressures may be taken as desired, or may be requested on wells Division in writing of the exact time the test is to be commenced. Offset operators shall also be so notified. which have previously shown questionable test data.

3. The packer leakage test shall commence when both zones of the dual completion are shut-in for pressure stabilization. Both zones shall remain shut-in until the well-head pressure in each has stabilized, provided however, that they need not remain shut-in more than seven days.

4. For Flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shut-in. Such test shall be continued for seven days in the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial packer leakage test, a gas well is being flowed to the atmosphere due to lack of a pipeline connection the flow period shall be three hours.

5. Following completion of Flow Test No. 1, the well shall again be shut-in, in accordance with Paragraph 3 above.

Released to Imaging: 8/6/2021 10:10:01 AM

Page 2 of 3 Page 2

24-hour oil zone tests: all pressources, throughout the entire test, shall be continuously measured and recorded with recording pressure gauges the accuracy of which must be checked at least twice, once at the beginning and once at the end of each test, with a deadweight pressure gauge. If a well is a gas-oil or an oil-gas dual completion, the recording gauge shall be required on the oil zone only, with deadweight pressures as required above being taken on the gas zone.

8. The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the Aztec District Office of the New Mexico Oil Conservation Division on Northwest New Mexico Packer Leakage Test Form Revised 10-01-78 with all deadweight pressures indicated thereon as well as the flowing temperatures (gas zones only) and gravity and GOR (oil zones only).
