Solaris requests to run a 7-5/8" x 5-1/2" scab liner system to isolate a mechanical integrity issue within the existing 7-5/8" casing. The liner would be ran from a depth of 11,325' above the 7-5/8" casing patch and tie into the existing 5-1/2" liner top with a seal assembly at 13,622' covering all possible leak points in between. The casing for the liner would be 5-1/2", 20#, HCP-110, FJ3 (flush joint). As a result of the new liner, the 3-1/2" portion of the injection tubing string will need to be extended to above the new 5-1/2" liner top as shown below. We were unable to locate additional flush joint 3-1/2" on such short notice but were able to find 3.75" OD special clearance couplings for use inside of the 5-1/2", 20# scab liner system.
