	NORT	HWEST NEWMEXICO	PACKER LEAKAGE	TEST INSTRUCTIO	NS
1. A packer leakage test shall be comr					ted even though no leak was indicated during Flow Test No. 1. Procedure
completion of the well, and annually ther Such tests shall also be commenced on a chemical or fracture treatment, and wher	ll multiple completions within seven day	s following recompletion and	l/or remain shut-		as for Flow Test No. 1 except that the previously produced zone shall as previously shut-in is produced.
the tubing have been disturbed. Tests sh requested by the Division.			1	es for gas-zone tests mus	t be measured on each zone with a deadweight pressure gauge at time
1			intervals as f	ollows: 3 hours tests: imr	and at hourly intervals thereafter, including one pressure measurement
2. At least 72 hours prior to the comm Division in writing of the exact time the	nencement of any packer leakage test, th test is to be commenced. Offset operate		immediately flow period,	prior to the conclusion of at least one time during e	each flow period. 7-day tests: immediately prior to the beginning of each ach flow period (at approximately the midway point) and immediately prior Other pressures may be taken as desired, or may be requested on wells

The packer leakage test shall commence when both zones of the dual completion are shut-in for pressure 3. stabilization. Both zones shall remain shut-in until the well-head pressure in each has stabilized, provided however, that they need not remain shut-in more than seven days.

4. For Flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shut-in. Such test shall be continued for seven days in the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial packer leakage test, a gas well is being flowed to the atmosphere due to lack of a pipeline connection the flow period shall be three hours.

5. Following completion of Flow Test No. 1, the well shall again be shut-in, in accordance with Paragraph 3 above.

which have previously shown questionable test data.

24-hour oil zone tests: all pressures, throughout the entire test, shall be continuously measured and recorded with recording pressure gauges the accuracy of which must be checked at least twice, once at the beginning and once at the end of each test, with a deadweight pressure gauge. If a well is a gas-oil or an oil-gas dual completion, the recording gauge shall be required on the oil zone only, with deadweight pressures as required above being taken on the gas zone.

 The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the Aztec District Office of the New Mexico Oil Conservation Division on Northwest New Mexico Packer Leakage Test Form Revised 10-01-78 with all deadweight pressures indicated thereon as well as the flowing temperatures (gas zones only) and gravity and GOR (oil zones only).
