Notice of Intent

Sundry ID: 2686541

Type of Submission: Notice of Intent	Type of Action: Plug and Abandonment
Date Sundry Submitted: 08/10/2022	Time Sundry Submitted: 12:31
Date proposed operation will begin: 06/07/2022	

**Procedure Description:** SG Interests I, Ltd. plans to P&A the subject well. An onsite has been held and reported on previous Sundries. Attached is the plugging procedure, reclamation procedure and well bore drawings. Actual work will commence after BLM and OCD approval.

Surface Disturbance

Is any additional surface disturbance proposed?: No

**Directions:**

From Counselor Trading Post on U.S. Hwy. 550, travel south on U.S. 550 ±0.1 miles, turn right on dirt road with sign "Star Lake Compressor-26 miles". This is the 0 miles point for this description. Follow dirt road:

4.30 miles- Turn left at "Ojo Encino School" sign,  
 11.00 miles- Transition to pavement with sign "N 474",  
 15.40 miles- Turn right off pavement through cattle guard onto dirt road, signed SG Interests – El Pintado CDP South. Continue on dirt road in a south westerly direction,  
 16.60 miles- Turn left immediately after old cattle guard, follow lease road east and then south,  
 17.65 miles - Follow improved access road south ±7500 feet to location.

**N00 Navajo #1**  
**P&A Procedure**

**Current Wellbore Diagram**

*Note 1) Cell Phone service is nonexistent to limited on location.*

*Note 2) Comply with all safety and environmental requirements.*

*All P&A fluids (rig pits, flow back tanks, frac tanks)*

*Will be hauled to nearest available legal disposal site.*

*Note 3) BLM & NMOCD must be Notified 24 hrs in advance of any cementing*

*Note 4) This well will be prepped with Rig and initially cemented above perforations  
with a work string. The final P&A will be done Rig-less.*

*Rig pit will be "salted" with 5-7 sx of sugar to keep cement from setting  
in pit.*

*Note 5) There is a heavy presence of Archaeology in this area and all traffic  
will be restricted to the actual driving surface of the roads and location.*

**N00 Navajo #1  
P&A Procedure**

**Procedure, Part One:**

- 1) Hold Safety Meeting. No rig anchors necessary and will already be pulled. Use water truck for fresh water tank.
- 2) MIRUSU. Check & record bradenhead, tubing & casing pressures. Record. Blow well down to rig pit.
- 2) POOH w rods & pump, laying down on trailer. Send Pump, ratigan and stuffing box to Drake, and the polished rod, rods/sinker bars to M&R yard.
- 3) NDWH, NUBOP. RU Tuboscope. POOH standing back good tubing. Lay down bad tubing. Keep separate. Check for corrosion and operation of valves. Replace valves and fittings as necessary. Replace bad tubing with yellow band for work-string and add for TD depth. TIH w/ bit, scraper, SN and tbg. Check for fill and/or scale. Report. If fill is below 2735' KB do not CO. If fill is above 2735' KB, RU bailer & CO until comfortably below 2735' KB.
- 4) POOH w/ work string. LD on bank bit, scraper, SN or Bailer. TIH w/ tubing to btm. Pull up 1 jt and circulate hole with fresh water.
- 5) RU Drake Cement Pump Truck. Mix 66 sx Type III Cement (90 cu ft), and cement to approx. 1750' KB and above perforations. POOH with tbg and lay down.
- 6) NDBOP. NUWH. Allow cement to harden.
- 7) Police location for trash, etc. RDMOSU.

**Cementing Program:**

Interval	Size, Wt, Grade, Thread	Depth	Cement
Production	4-1/2", 10.5#, J-55, ST&C	1000' KB	72 sx Type III (10% xcess capacity)
Cement & Additives	Water Requirements	Weight/Yield	
Type III	6.68 gals/sx	14.6 ppg / 1.37 cu.ft/sx	

**N00 Navajo #1  
P&A Procedure**

**Procedure, Part Two:**

- 1) Hold Safety meeting. MIRU Drake Cementing Unit, rig pit, cementing WH spool and poly-pipe spool. Record bradenhead, casing and tubing pressures. Report any problem pressures. Blow down casing gently in case of thermal expansion pressure.
- 2) NDWH & NU spool for circulation to rig pit. RU poly spooling unit.
- 3) RIH with 2" poly-pipe to Cement top,  $\pm 1750'$  KB. Connect poly-pipe to cementing unit.
- 4) Establish circulation with fresh water and circulate hole with 127 sx (174 cu ft), Type III cement, displacing water/cement to sugar spiked rig pit. (10% excess capacity) *(Note: adjust cement volumes for depth of part one cement top)*
- 5) When cement is circulated to surface, shut down, Cleanout pump and piping to pit. RD Drake Cementing Unit.
- 6) Cut poly off at surface. Top off casing and after BLM approval, install P&A marker.
- 7) RDMO Drake Cementing.
- 8) MIRU Keystone and start surface remediation.

**Cementing Program:**

Interval	Size, Wt, Grade, Thread	Depth	Cement
Production	4-1/2", 10.5#, J-55, ST&C	1231' KB	115 sx Type III (10% xcess capacity)
Cement & Additives	Water Requirements	Weight/Yield	
Type III	6.68 gals/sx	14.6 ppg / 1.37 cu.ft/sx

Attachment to notice of Intention to Abandon

Well: Noo Navajo 1

\*Fill up wellbore with cement proposal. BLM Geology Report not applicable.

**CONDITIONS OF APPROVAL**

1. Plugging operations authorized are subject to the attached "General Requirements for Permanent Abandonment of Wells on Federal and Indian Lease."
2. Farmington Office is to be notified at least 24 hours before the plugging operations commence at (505) 564-7750.

You are also required to place cement excesses per 4.2 and 4.4 of the attached General Requirements.

Office Hours: 7:45 a.m. to 4:30 p.m.

K. Rennick 08/10/2022

**GENERAL REQUIREMENTS FOR  
PERMANENT ABANDONMENT OF WELLS ON FEDERAL AND INDIAN LEASES  
FARMINGTON FIELD OFFICE**

1.0 The approved plugging plans may contain variances from the following minimum general requirements.

1.1 Modification of the approved plugging procedure is allowed only with the prior approval of the Authorized Officer, Farmington Field Office.

1.2 Requirements may be added to address specific well conditions.

2.0 Materials used must be accurately measured. (densometer/scales)

3.0 A tank or lined pit must be used for containment of any fluids from the wellbore during plugging operations and all pits are to be fenced with woven wire. These pits will be fenced on three sides and once the rig leaves location, the fourth side will be fenced.

3.1 Pits are not to be used for disposal of any hydrocarbons. If hydrocarbons are present in the pit, the fluids must be removed prior to filling in.

4.0 All cement plugs are to be placed through a work string. Cement may be bull-headed down the casing with prior approval. Cement caps on top of bridge plugs or cement retainers may be placed by dump bailer.

4.1 The cement shall be as specified in the approved plugging plan.

4.2 All cement plugs placed inside casing shall have sufficient volume to fill a minimum of 100' of the casing, or annular void(s) between casings, plus an excess volume sufficient to provide for 50 linear feet of fill above the plug.

4.3 Surface plugs may be no less than 50' in length.

4.4 All cement plugs placed to fill annular void(s) between casing and the formation shall be of sufficient volume to fill a minimum of 100' of the annular space plus 100% excess, calculated using the bit size, or 100' of annular capacity, determined from a caliper log, plus an excess volume sufficient to provide for 50 linear feet of fill above the plug.

4.5 All cement plugs placed to fill an open hole shall be of sufficient volume to fill a minimum of 100' of hole, as calculated from a caliper log, plus an excess volume sufficient to provide for 50 linear feet of fill above the plug. In the absence of a caliper log, an excess of 100% shall be required.

**4.6 A cement bond log or other accepted cement evaluation tool is required to be run if one had not been previously ran or cement did not circulate to surface during the original casing cementing job or subsequent cementing jobs.**

5.0 All cement plugs spotted across, or above, any exposed zone(s), when; the wellbore is not full of fluid or the fluid level will not remain static, and in the case of lost circulation or partial returns during cement placement, shall be tested by tagging with the work string.

- 5.1 The top of any cement plug verified by tagging must be at or above the depth specified in the approved plan, without regard to any excess.
- 5.2 Testing will not be required for any cement plug that is mechanically contained by use of a bridge plug and/or cement retainer, if casing integrity has been established.
- 5.3 Any cement plug which is the only isolating medium, for a fresh water interval or a zone containing a prospectively valuable deposit of minerals, shall be tested by tagging.
- 5.4 If perforations are required below the surface casing shoe, a 30 minute minimum wait time will be required to determine if gas and/or water flows are present. If flow is present, the well will be shut-in for a minimum of one hour and the pressure recorded. Short or long term venting may be necessary to evacuate trapped gas. **If only a water flow occurs with no associated gas, shut well in and record the pressures. Contact the Engineer as it may be necessary to change the cement weight and additives.**

6.0 Before setting any cement plugs the hole needs to be rolled. All wells are to be controlled by means of a fluid that is to be of a weight and consistency necessary to stabilize the wellbore. This fluid shall be left in place as filler between all plugs.

- 6.1 Drilling mud may be used as the wellbore fluid in open hole plugging operations.
- 6.2 The wellbore fluid used in cased holes shall be of sufficient weight to balance known pore pressures in all exposed formations.

7.0 A blowout preventer and related equipment (BOPE) shall be installed and tested prior to working in a wellbore with any exposed zone(s); (1) that are over pressured, (2) where the pressures are unknown, or (3) known to contain H<sub>2</sub>S.

8.0 Within 30 days after plugging work is completed, file a Sundry Notice, Subsequent Report of Abandonment (Form 3160-5), five copies, with the Field Manager, Bureau of Land Management, 6251 College Blvd., Suite A, Farmington, NM 87402. The report should show the manner in which the plugging work was carried out, the extent, by depth(s), of cement plugs placed, and the size and location, by depth(s), of casing left in the well. Show date well was plugged.

9.0 All permanently abandoned wells are to be marked with a permanent monument as specified in 43 CFR 3162.6(d). Unless otherwise approved.

10.0 If this well is located in a Specially Designated Area (SDA), compliance with the appropriate seasonal closure requirements will be necessary.

All of the above are minimum requirements. Failure to comply with the above conditions of approval may result in an assessment for noncompliance and/or a Shut-in Order being issued pursuant to 43 CFR 3163.1. You are further advised that any instructions, orders or decisions issued by the Bureau of Land Management are subject to administrative review pursuant to 43 CFR 3165.3 and appeal pursuant to 43 CFR 3165.4 and 43 CFR 4.700.
