SUNDRY NOTICES AND REPORTS ON WELLS

(DO NOT USE THIS FORM FOR PROPOSALS TO DRILL OR TO DEEPEN OR PLUG BACK TO A DIFFERENT RESERVOIR. USE "APPLICATION FOR PERMIT" (FORM C-101) FOR SUCH PROPOSALS.)

1. Type of Well: Oil Well ☒ Gas Well ☐ Other

2. Name of Operator
 Extex Operating Company

3. Address of Operator
 5065 Westheimer Road #625, Houston, TX 77056

4. Well Location
 Unit Letter H : 1980 feet from the N line and 660 feet from the E line
 Section 25 Township 20S Range 38E NMPM County Lea

11. Elevation (Show whether DR, RKB, RT, GR, etc.)
 3,564' GR

12. Check Appropriate Box to Indicate Nature of Notice, Report or Other Data

NOTICE OF INTENTION TO:

PERFORM REMEDIAL WORK ☐ PLUG AND ABANDON ☐
 TEMPORARILY ABANDON ☐ CHANGE PLANS ☐
 PULL OR ALTER CASING ☐ MULTIPLE COMPL ☐
 DOWNHOLE COMMINGLE ☐
 CLOSED-LOOP SYSTEM ☐
 OTHER: Recomplete to San Andres zone ☒

SUBSEQUENT REPORT OF:

REMEDIAL WORK ☐ ALTERING CASING ☐
 COMMENCE DRILLING OPNS. ☐ P AND A ☐
 CASING/CEMENT JOB ☐

OTHER: ☐

13. Describe proposed or completed operations. (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work). SEE RULE 19.15.7.14 NMAC. For Multiple Completions: Attach wellbore diagram of proposed completion or recompletion.

Extex Operating will be recompleting the DK #2 to the San Andres zone. Extex Operating's planned procedure to recomplete the well is as follows:

- MIRU PU as soon as work is approved by OCD.
- Set CIBP (w/20' cement) @ ~5,950'.
- Perf San Andres fr/~4,400'-4,750'.
- Treat zone w/acid & fracture treat if necessary.
- Return well to production in San Andres zone.

NATURAL GAS MANAGEMENT PLAN

This Natural Gas Management Plan must be submitted with each Application for Permit to Drill (APD) for a new or recompleted well.

Section 1 – Plan Description

Effective May 25, 2021

I. Operator: Extex Operating Company **OGRID:** 330423 **Date:** 06 / 23 / 2022

II. Type: ☒ Original ☐ Amendment due to ☐ 19.15.27.9.D(6)(a) NMAC ☐ 19.15.27.9.D(6)(b) NMAC ☐ Other.

If Other, please describe: _____

III. Well(s): Provide the following information for each new or recompleted well or set of wells proposed to be drilled or proposed to be recompleted from a single well pad or connected to a central delivery point.

Well Name	API	ULSTR	Footages	Anticipated Oil BBL/D	Anticipated Gas MCF/D	Anticipated Produced Water BBL/D
DK #1	30-025-30136	A-25-20S-38E	660 FNL 660 FEL	25	50	50
DK #2	30-025-30403	H-25-20S-38E	1980 FNL 660 FEL	25	50	50
DK #3	30-025-30520	B-25-20S-38E	660 FNL 1980 FEL	25	50	50
DK #4	30-025-33577	G-25-20S-38E	1980 FNL 1980 FEL	25	50	50

IV. Central Delivery Point Name: DK #1 Tank Btry [See 19.15.27.9(D)(1) NMAC]

V. Anticipated Schedule: Provide the following information for each new or recompleted well or set of wells proposed to be drilled or proposed to be recompleted from a single well pad or connected to a central delivery point.

Well Name	API	Spud Date	TD Reached Date	Completion Commencement Date	Initial Flow Back Date	First Production Date
DK #1	30-025-30136			09/01/2022	09/15/2022	09/15/2022
DK #2	30-025-30403			08/01/2022	08/15/2022	08/15/2022
DK #3	30-025-30520			07/15/2022	08/01/2022	08/01/2022
DK #4	30-025-33577			09/15/2022	10/01/2022	10/01/2022

VI. Separation Equipment: ☒ Attach a complete description of how Operator will size separation equipment to optimize gas capture.

VII. Operational Practices: ☒ Attach a complete description of the actions Operator will take to comply with the requirements of Subsection A through F of 19.15.27.8 NMAC.

VIII. Best Management Practices: ☒ Attach a complete description of Operator's best management practices to minimize venting during active and planned maintenance.

Section 2 – Enhanced Plan**EFFECTIVE APRIL 1, 2022**

Beginning April 1, 2022, an operator that is not in compliance with its statewide natural gas capture requirement for the applicable reporting area must complete this section.

☒ Operator certifies that it is not required to complete this section because Operator is in compliance with its statewide natural gas capture requirement for the applicable reporting area.

IX. Anticipated Natural Gas Production:

Well	API	Anticipated Average Natural Gas Rate MCF/D	Anticipated Volume of Natural Gas for the First Year MCF

X. Natural Gas Gathering System (NGGS):

Operator	System	ULSTR of Tie-in	Anticipated Gathering Start Date	Available Maximum Daily Capacity of System Segment Tie-in

XI. Map. ☐ Attach an accurate and legible map depicting the location of the well(s), the anticipated pipeline route(s) connecting the production operations to the existing or planned interconnect of the natural gas gathering system(s), and the maximum daily capacity of the segment or portion of the natural gas gathering system(s) to which the well(s) will be connected.

XII. Line Capacity. The natural gas gathering system ☐ will ☐ will not have capacity to gather 100% of the anticipated natural gas production volume from the well prior to the date of first production.

XIII. Line Pressure. Operator ☐ does ☐ does not anticipate that its existing well(s) connected to the same segment, or portion, of the natural gas gathering system(s) described above will continue to meet anticipated increases in line pressure caused by the new well(s).

☐ Attach Operator's plan to manage production in response to the increased line pressure.

XIV. Confidentiality: ☐ Operator asserts confidentiality pursuant to Section 71-2-8 NMSA 1978 for the information provided in Section 2 as provided in Paragraph (2) of Subsection D of 19.15.27.9 NMAC, and attaches a full description of the specific information for which confidentiality is asserted and the basis for such assertion.

Section 3 - Certifications

Effective May 25, 2021

Operator certifies that, after reasonable inquiry and based on the available information at the time of submittal:

☒ Operator will be able to connect the well(s) to a natural gas gathering system in the general area with sufficient capacity to transport one hundred percent of the anticipated volume of natural gas produced from the well(s) commencing on the date of first production, taking into account the current and anticipated volumes of produced natural gas from other wells connected to the pipeline gathering system; or

☐ Operator will not be able to connect to a natural gas gathering system in the general area with sufficient capacity to transport one hundred percent of the anticipated volume of natural gas produced from the well(s) commencing on the date of first production, taking into account the current and anticipated volumes of produced natural gas from other wells connected to the pipeline gathering system.

If Operator checks this box, Operator will select one of the following:

Well Shut-In. ☐ Operator will shut-in and not produce the well until it submits the certification required by Paragraph (4) of Subsection D of 19.15.27.9 NMAC; or

Venting and Flaring Plan. ☐ Operator has attached a venting and flaring plan that evaluates and selects one or more of the potential alternative beneficial uses for the natural gas until a natural gas gathering system is available, including:

- (a) power generation on lease;
- (b) power generation for grid;
- (c) compression on lease;
- (d) liquids removal on lease;
- (e) reinjection for underground storage;
- (f) reinjection for temporary storage;
- (g) reinjection for enhanced oil recovery;
- (h) fuel cell production; and
- (i) other alternative beneficial uses approved by the division.

Section 4 - Notices

1. If, at any time after Operator submits this Natural Gas Management Plan and before the well is spud:

(a) Operator becomes aware that the natural gas gathering system it planned to connect the well(s) to has become unavailable or will not have capacity to transport one hundred percent of the production from the well(s), no later than 20 days after becoming aware of such information, Operator shall submit for OCD's approval a new or revised venting and flaring plan containing the information specified in Paragraph (5) of Subsection D of 19.15.27.9 NMAC; or

(b) Operator becomes aware that it has, cumulatively for the year, become out of compliance with its baseline natural gas capture rate or natural gas capture requirement, no later than 20 days after becoming aware of such information, Operator shall submit for OCD's approval a new or revised Natural Gas Management Plan for each well it plans to spud during the next 90 days containing the information specified in Paragraph (2) of Subsection D of 19.15.27.9 NMAC, and shall file an update for each Natural Gas Management Plan until Operator is back in compliance with its baseline natural gas capture rate or natural gas capture requirement.

2. OCD may deny or conditionally approve an APD if Operator does not make a certification, fails to submit an adequate venting and flaring plan which includes alternative beneficial uses for the anticipated volume of natural gas produced, or if OCD determines that Operator will not have adequate natural gas takeaway capacity at the time a well will be spud.

I certify that, after reasonable inquiry, the statements in and attached to this Natural Gas Management Plan are true and correct to the best of my knowledge and acknowledge that a false statement may be subject to civil and criminal penalties under the Oil and Gas Act.

NATURAL GAS MANAGEMENT PLAN - ATTACHMENTS

DK 1234 FACILITY – LEA COUNTY, NM

VI. Separation Equipment:

The DK 1234 production facility is an established production facility. The current daily production through the facility is approximately 9 bopd + 47 mcfgpd + 47 bwpd. The facility is sized to handle 800 bopd + 1000 mcfgpd + 500 bwpd. During and upon completion of the planned recompletion work the maximum anticipated production at any given time is estimated to be 100 bopd + 200 mcfgpd + 200 bwpd. The current sizing of the facility is such that the anticipated maximum production can be handled without any adjustments. If the actual maximum production exceeds the capability of the current facility it will be modified to handle such increase.

VII. Operational Practices:

19.15.27.8 (A) Venting and Flaring of Natural Gas

Extex Operating Company understands the requirements of NMAC 19.15.27.8 which states that the venting and flaring of natural gas during drilling, completion or production that constitutes waste as defined in 19.15.2 are prohibited.

19.15.27.8 (B) Venting and Flaring During Drilling Operations

Extex Operating Company shall capture or combust natural gas if technically feasible during drilling operations using best industry practices.

During drilling operations a flare stack with a 100 percent capacity for expected volumes will be set on location of the DK 1234 facility at least 100' from the nearest surface hole location, well head, and storage tanks.

In the event of an emergency Extex Operating Company will vent natural gas in order to avoid substantial impact and shall report vented or flared gas to the NM OCD.

19.15.27.8 (C) Venting and Flaring During Completion or Recompletion

As Extex Operating Company has an adequately designed production facility in place, if during recompletion operations, the need to produce oil and gas arises it will direct such oil and gas through the completion equipment at the tank battery. Any gas vented during transition of routing the gas to the production facility will be measured or estimated regardless of the reason or authorization for venting. During the life of the well(s) producing to the DK 1234 facility an AVO inspection will be performed weekly (at minimum) to confirm that all production equipment

is operating properly and there are no leaks or releases as allowed in subsection D of 19.15.27.8 NMAC.

19.15.27.8 (D) Venting and Flaring During Production Operations

At any point in the life of the well(s) (production or inactive) an AVO inspection will be performed weekly (at minimum) to confirm that all production equipment is operating properly and there are no leaks except as allowed in subsection D of 19.15.27.8 NMAC. Monitoring of manual liquid unloading for wells on site or in close proximity, taking reasonable actions to stabilize rate and pressure as soon as practical, and take reasonable actions to minimize venting to the maximum extent practicable. Extex Operating Company will measure or estimate volumes of natural gas that is vented, flared or beneficially used during drilling, completion, and production operations, regardless of the reason for such venting or flaring.

19.15.27.8 (E) Performance Standards

All tanks and separation equipment are designed for maximum throughput and pressure to minimize waste. An AVO inspection will be performed weekly (at minimum) to confirm that all production equipment is operating properly and there are no leaks except as allowed in subsection D of 19.15.27.8 NMAC.

19.15.27.8 (F) Measurement or Estimation of Vented and Flared Natural Gas

The volume of natural gas vented or flared from process piping or a flowline piped from the equipment associated with a well and the DK 1234 facility will be measured or estimated. Measurement equipment is designed to allow diversion of natural gas around the equipment for the sole purpose of inspecting and servicing the measurement equipment, as noted in NMAC 19.15.27.8 Subsection G.

VIII. Best Management Practices:

Extex Operating Company utilizes best management practices to minimize venting during active and planned maintenance. All gas is sold during normal producing operations. The only time gas will be vented or flared will be during planned maintenance or for emergence reasons. During any required instance of gas venting or flaring the volume of gas will be measured or estimated.
