OTHER:	☐			OTHER: Quarterly Injection Data Reports	☒		

13. Describe proposed or completed operations. (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work). SEE RULE 19.15.7.14 NMAC. For Multiple Completions: Attach wellbore diagram of proposed completion or recompletion. **Well bore Diagrams attached.**

MONUMENT AGI D #2 MAOP 3000 psig NMOCC Administrative Order SWD-1654.
Quarterly Report for the period from April 1 through June 30, 2022 Pursuant to NMOCC AO SWD-1654.
This report includes the data and analysis of surface injection pressure, TAG temperature, casing annular pressures as well as downhole injection pressure, and temperature (i.e. injection parameters) for the Monument AGI D #2 for Q2 2022. Based on data for surface injection/annular pressure, the well continues to show excellent integrity throughout all of this reporting period. For this quarter, the values for injection parameters are generally stable (almost identical to Q1 2022) and yielded the following results, which are graphed in detail in attached Figures 1 through 6. Brief interruptions in flow occurred in early May due to compressor repair and about 48hrs of injection rate data was not recorded in early June due to power supply interruption to meter. The following average values represent the operational condition of the well and the conditions reflect the events described above incorporated in the averages:
Surface Measurements: Average TAG Injection Pressure: 1547 psig, Average Annular Pressure: 311 psig, Average Pressure Differential: 1236 psig, Average Tag Temperature: 105 °F, Average TAG injection rate: 2073 MSCFD.
Downhole Measurements: Average bottom-hole pressure 4,424 psig, Average bottom-hole Temperature: 117° F.

The data gathered throughout this quarter demonstrate the correlative behavior of the annular pressure with the flowrate, injection pressure and temperature, and show the sensitive and correlative response of the annular pressure confirming that the well has good integrity and is functioning appropriately within the requirements of the NMOCC order despite the data loss. Upsets and drops in injection rate caused decreases in TAG injection rates resulting in typical and corresponding changes in the other injection parameters. Average injection rate was slightly lower than in Q1 2022 while injection and bottom hole pressures dropped about 8%. This well is had its successful annual required MIT and Braden head test completed in January 2022 and reported to OCD. No mechanical changes to the well or wellhead have been made since the last quarterly report. The Monument AGI D #2 well displays excellent reservoir characteristics easily accommodating the required volumes of TAG from the facility.
I hereby certify that the information above is true and complete to the best of my knowledge and belief.
