13. Describe proposed or completed operations. (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work). SEE RULE 19.15.7.14 NMAC. For Multiple Completions: Attach wellbore diagram of proposed completion or recompletion.

12/6/2021 Cellar was excavated considerably to finish removing the wellhead.

12/7/2021 After all parties arrived a safety meeting was conducted and the protocol for removing the wellhead was reviewed. TFH safety and two engineers inspected the exposed casing below the wellhead with gas detection equipment. No explosive gases were detected. The wellhead was removed. The 5 1/2" casing was approximately 6' from the cut off point. The 5 1/2" casing had parted and fallen on the previous attempt to remove the wellhead. Oil was present the 5 1/2" x 9 5/8" annulus. 3/4" PVC was ran to a depth of 100'. Calculated volume of the 100' 5 1/2" x 9 5/8" annulus is 4.14 barrels. Annulus was circulated clean and cement was circulated to surface with 18 sx Class C cement. Filled up the 9 5/8" x 13 3/8" annulus with 47 sx Class C cement. Cement remained static in all casing strings. Installed standard dry hole marker.

12/8/2021 Back filled the cellar

WELL # 53

Furnish welder to remove well head after inspection by T & H safety and other representatives on location

Once well head was removed ran 3/4" PVC to 100' and circulated 5 1/2" x 9 5/8" annulus until all oil was removed. Circulated cement to surface in 34-41 annulus with 18 sx Class C (148# 1.37 yield) cement. Also drilled 9 5/8" x 13 3/8" annulus to surface with 47 sx Class C cement. Calculated depth from cement volume @ 250'. Cement remained stable @ surface.

Installed $\frac{1}{4}$ " plate on $13\frac{1}{8}$ casing to cap well head
and installed standard oil hole marker
