P&A Procedure

EPIC Energy – State 32-2

Lybrook Gallup

340' FSL & 847' FEL, Section 32, T24N, R7W

Rio Arriba County, New Mexico, API #30-039-24771

Plug & Abandonment Procedure:

Note: All cement volumes use 100% excess outside casing and 50' excess inside pipe. Stabilizing wellbore fluid will be 8.33 ppg, sufficient to balance all exposed formation pressures. All cement will be ASTM Class G neat 1.15 ft³/sk or equivalent. If casing pressure tests tagging plugs will not be required. Note: records indicate that primary cement job on both surface casing and production casing, circulated cement to surface.

Pertinent well data: See attached WBD

Prior to Mobilization

- 1. Notify NMOCD
- 2. Verify all cement volumes based on actual slurry to be pumped. Calculations based on 1.15 ft³/sk.
- 3. Comply with all COA's from NMOCD and SLO

P&A Procedure

- 1. MIRU PU and cement equipment
- 2. Hot oil/water rod string. ND horsehead and bridal. Lay down polish rod/stuffing box and rod string and pump.
- 3. ND WH, NU BOP, RU rig floor and 2 3/8" handling tools
- 4. POOH and LD 2 3/8" production string
- 5. Tally and PU 2 3/8" works string and RT 4 ½" casing scraper to top perf (6012').
- 6. TIH with 4 1/2" CICR and set @ 5864'
- 7. Pressure test tubing to 1000 psi, load hole w/ water, close pipe rams and pressure test casing to 500 psi.
- 8. Plug #1, 5864' 6120'. Gallup Top: 5914' Perfs: 6012' 6120'): Sting into CICR set @ 5864'. Mix & pump 23 sxs (26.45 ft³) of Class G neat cement (or equivalent) leaving 50' of cement on top of retainer. PU 100' above TOC and reverse circulate tubing clean. Shut pipe rams and pressure test casing to 500 psi. Note: Cement circulated to surface on primary cement jobs but if required, TOH and run CBL.
- 9. Plug #2, 5136' -- 5286'. Mancos Top: 5236'. Place EOT at 5286'. Mix and spot (in a balanced plug) 12 sx (13.8 cf) of Class G neat cement. Pull up to 100' above cement top and reverse tubing clean.
- 10. Plug #3, 4136' 4311'. Mesaverde Top: 4261'. Pull up to 4136'. Mix and spot (in a balanced plug) 12 sx (13.8 cf) of Class G neat cement. Pull up to 100' above cement and reverse tubing clean.

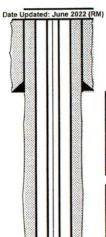

- 11. Plug #4, 3046' 3196'. Chacra Top: 3146'. Pull up to 4136'. Mix and spot (in a balanced plug) 12 sx (13.8 cf) of Class G neat cement. Pull up to 100' above cement and reverse tubing clean.
- 12. Plug #5, 2216' 2747'. Pictured Cliffs/Fruitland Top: 2316'. Pull up to 2747'. Mix and spot (in a balanced plug) 40 sx (46 cf) of Class G neat cement. Pull up to 100' above cement and reverse tubing clean.
- 13. Plug #6, 2006' 2366'. Kirtland/Ojo Alamo Top: 2056'. Pull up to 2366'. Mix and spot (in a balanced plug) 28 sx (32.2 cf) of Class G neat cement. Pull up to 100' above cement and reverse tubing clean.
- 14. Plug #7, (8-5/8" Surface casing shoe, 371' to Surface): Original surface casing circulated cement. Pull up to 50' below 8 5/8" surface casing shoe at 371' and mix approximately 30 sxs (34.5 cf) class G neat cement. Pull out of cement and lay down the remaining tubing. Top off as necessary.
- 15. ND BOP and cut off wellhead below surface casing flange, top off casing and annulus as necessary. Install P&A marker and cut off and/or remove anchors. RD, MOL Restore location per reclamation plan.

State 32-2 Reclamation

1. Epic Energy LLC is proposing to plug and abandon the State 32-2 wellbore and reclaim the well pad. This location is located on lands owned and managed by the State Land Office. The access road to the State 32-2 is currently being used for ingress/egress to BLM and private lands to the south. All production equipment including rig anchors and piping will be removed from the location. The area no longer in use will be ripped and seeded. The vegetation community which best represents the proposed project area is Mesa or Pinion—Juniper Community. The Mesa or Pinion—Juniper Community is comprised primarily of pinion and juniper trees with lesser amounts of basin big sage and minor areas of black sage with various grasses. It is found on all aspects from about 4,800 to 8,800 with pinion trees dominating at higher elevations and Juniper trees at lower elevations. The Mesa or Pinion—Juniper Community are typically found in shallow rock soils. The seed mix will be used with an emphasis placed on protecting reclaimed well pads from exotic plant invasion. Water management or erosion control features will be completed where necessary.
