	NORT	THWEST NEWMEXICO I	PACKER LEAKAGE	E TEST INSTRUCTIO	DNS
	nmenced on each multiply completed we ereafter as prescribed by the order autho				ted even though no leak was indicated during Flow Test No. 1. Procedure as for Flow Test No. 1 except that the previously produced zone shall
Such tests shall also be commenced on	all multiple completions within seven da enever remedial work has been done on	ys following recompletion and	/or remain shut-		vas previously shut-in is produced.
	shall also be taken at any time that comm			res for gas-zone tests mus	t be measured on each zone with a deadweight pressure gauge at time
. ,			intervals as i	follows: 3 hours tests: im	and at hourly intervals thereafter, including one pressure gauge at time and at hourly intervals thereafter, including one pressure measurement
	imencement of any packer leakage test, t e test is to be commenced. Offset operat		immediately flow period,	prior to the conclusion o at least one time during of	f each flow period. 7-day tests: immediately prior to the beginning of each each flow period (at approximately the midway point) and immediately prior
e	operation		which have j	previously shown questio	
			with recordi	ng pressure gauges the ac	res, throughout the entire test, shall be continuously measured and record curacy of which must be checked at least twice, once at the beginning and
3. The packer leakage test shall commence when both zones of the dual completion are shut-in for pressure stabilization. Both zones shall remain shut-in until the well-head pressure in each has stabilized, provided however, that they need not remain shut-in more than seven days.					adweight pressure gauge. If a well is a gas-oil or an oil-gas dual be required on the oil zone only, with deadweight pressures as required

4. For Flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shut-in. Such test shall be continued for seven days in the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial packer leakage test, a gas well is being flowed to the atmosphere due to lack of a pipeline connection the flow period shall be three hours.

5. Following completion of Flow Test No. 1, the well shall again be shut-in, in accordance with Paragraph 3 above.

Released to Imaging: 6/12/2023 1:53:07 PM

all be required on the oil zone only, with deadweight pressures as required above being taken on the gas zone.

8. The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the Aztec District Office of the New Mexico Oil Conservation Division on Northwest New Mexico Packer Leakage Test Form Revised 10-01-78 with all deadweight pressures indicated thereon as well as the flowing temperatures (gas zones only) and gravity and GOR (oil zones only).
