Olympic # 4

The TOC from CBL appear to be approximately at 350' from surface. Based on the CBL, we request the following change to the original approved procedure.

- **Plug VI: Kirtland-Ojo Alamo-Surface Casing shoe 0-399'** : Will perforate at 340'. Attempt to get rates through perforations. If a rate cannot be established, perforate at 300' and attempt again. RIH open ended to 399' to cover the Kirtland top to surface (Kirtland top at 349')

If the requested changes are acceptable to BLM & NMOCD, please let us know and we will proceed accordingly.

Regards,

Aliph
