13. Describe proposed or completed operations. (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work). SEE RULE 19.15.7.14 NMAC. For Multiple Completions: Attach wellbore diagram of proposed completion or recompletion. **Wellbore Diagrams attached.**

**Zia AGI#1 MAOP 2,233 psig NMOCC Order R-13809 / Zia AGI D#2 MAOP 5,208 psig NMOCC Order R-14207**

**Quarterly Report for the period from July 1 to September 30, 2025 (Q3) Pursuant to NMOCC Orders 13809 and 14207 for Zia AGI #1 and AGI D#2, respectively.**

This report includes the data and analysis of surface injection pressure, TAG temperature, casing annular pressure as well as downhole injection pressure, temperature, and annular pressure for the Zia AGI#1 and for the Zia AGI D#2 for Q3, 2025. AGI D#2 is the primary well for this facility with the Zia AGI #1 to be used only as a redundant and backup well. Based on data for surface injection/annular pressure and their current MITs both wells continue to show excellent integrity. For this quarter, the values for injection parameters are generally stable and yielded the following results which are graphed in detail in attached Figures 1 through 10. All the values presented below are averages for the static conditions in AGI #1 since the well was not in operation for the entire reporting period. Only AGI D#2 was operated during this quarter and its average values represent the normal operational condition of the well. Average injection rates for AGI D#2 have remained generally the same (5.40 MMSCFD in Q2 and 5.49 MMSCFD in Q3).

**AGI #1 Surface Measurements (inactive):** Average TAG Line Pressure: 10 psig, Average Annular Pressure: 300 psig, Average Pressure Differential: -290 psig, Average Tag Line Temperature: 101°F, Average TAG injection rate: 0.00 MMSCFD (not in use this quarter).

**AGI #1 Downhole Measurements (inactive):** Average bottom hole pressure: 3,274 psig, Average annular bottom hole pressure: 2,285 psig, Average annular bottom hole temperature: 98 °F, Average bottom hole TAG Temperature: 98 °F (all unchanged since 2021).

**AGI D#2 Surface Measurements:** Average TAG Injection Pressure: 1,933 psig, Average Annular Pressure: 134 psig, Average Pressure Differential: 1,799 psig, Average Tag Temperature: 110 °F, Average TAG injection rate: 5.49 MMSCFD.

**AGI D#2 Downhole Measurements:** Average bottom hole pressure 6,761 psig, Average bottom hole TAG Temperature: 162 °F. Only AGI D#2 was operated during this reporting period.

The data gathered throughout this quarter demonstrates the correlative behavior of the annular pressure with the flowrate, injection pressure and temperature confirming that both wells have good integrity and are functioning appropriately within the requirements of their respective NMOCC orders. No mechanical changes to either well or wellhead have been made since the last quarterly report. Well AGI D#2 displays excellent reservoir characteristics easily accommodating the required volumes of TAG from the facility. This well will be used as the primary disposal well for the facility with the AGI #1 well being operated as needed to confirm functionality and to allow for any required future maintenance on the AGI D#2 well.

I hereby certify that the information above is true and complete to the best of my knowledge and belief.
