For State Use Only

APPROVED BY: TITLE DATE

Conditions of Approval (if any):

Llano Disposal, LLC
BW-35 API 30-025-30701

- 1) It is the intention of Llano Disposal LLC to perform a brine cavity pressure test (MIT) on our Siringo AC St. # 1 bw-35 API 30-025-30701.
- 2) We would like to schedule this test to begin at 11:00 AM on Wednesday, January 28th, 2026. We will notify the Hobbs NMOCD office by telephone well in advance of the test.
- 3) We will prepare the well for testing by exposing and opening all casing risers, isolating well piping from all external connections, and assuring that all equipment is in good working order.
- 4) We will pressure up on the entire system (casing and cavern) by pumping on the tubing string (the OCD required regimen of pressuring the system for the production of brine water) until static pressure reaches 325 PSIG. We will have a recently calibrated and certified pressure recorder connected that is equipped with a spring of 500 PSI rating, a matching 500 psi chart, and a 12 hour clock.
- 5) We will be prepared to monitor the well with OCD witness for the full duration of the 4-hour test. We will use water as a testing media.
- 6) After the test has been completed, the chart will be labeled to note operator name, well name, well API number, and well legal location. We will note on the chart that test pressure was applied to the casing, tubing, and formation, or "Testing Procedure # 1".
- 7) A representative of Llano Disposal, LLC will sign and date the pressure chart for presentation to the OCD witness on site.
