**1. Visual Examination**

An API 16C, 3"x 45' ft Conti choke & kill hose with SS armor and 4 1/16" 10K flanges was received from Nabors for inspection, testing and external cosmetic repairs. The hydrostatic pressure testing was requested to 15,000 PSI, by the customer "Nabors Drilling".

Visual inspection and examination of hose armor over the assembly; identified damaged areas at 3'10", 24'9" from reference point End 1. Both external & internal hose body and couplings of the hose were examined. Photos in Table 2, captures the external details of the hoses, in good condition along the length.

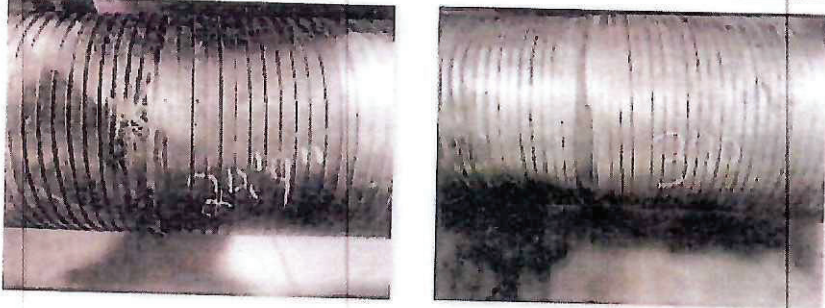

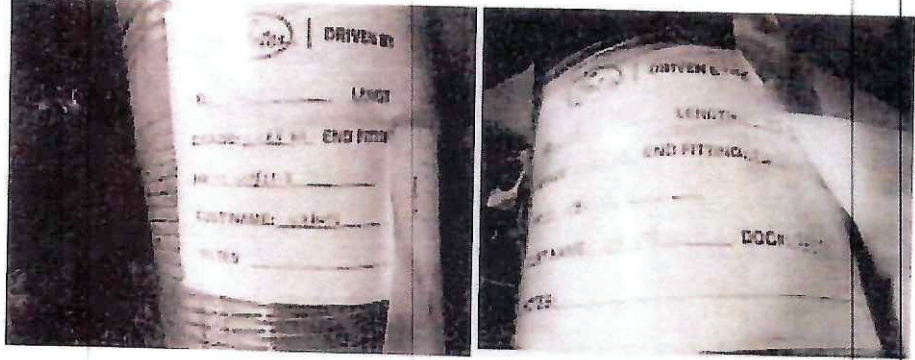

The hose was hydrostatically tested at 15,000 psi test pressure with an hour long hold. On completion of hydrostatic testing, borescoping was carried out, to check the condition of internal hose areas, mainly hose tube and coupling hose interface. The coupling-tube interface and the general tube condition appeared to be good as shown in Section 3 photos.
