Read & Stevens has sought and been unable to obtain voluntary agreement for the development of these lands from all interest owners in the proposed spacing units. The pooling of interests will allow Read & Stevens to obtain a just and fair share of the oil and gas underlying the subject lands, avoid the drilling of unnecessary wells, will prevent waste, and will protect correlative rights.

Cimarex Case Nos. 23448-23455 and 23594-23601 seek to create competing Bone Spring and Wolfcamp spacing units, respectively, in same acreage Read & Stevens seeks to develop with its proposed wells.

Read & Stevens believes that the following facts are undisputed and material to the issues presented in these consolidated cases:

1. Read & Stevens has proposed a co-development plan with initial wells proposed to be completed in several zones across multiple offsetting spacing units within the Bone Spring and Wolfcamp pools. In contrast, Cimarex's competing development plan proposes to complete initial wells only in the Bone Spring pool and to create Wolfcamp spacing units without the completed interval of any proposed initial wells penetrating any of the tracts in the Wolfcamp pool. In short, Cimarex proposes to force pool working interest owners into Wolfcamp spacing units without proposing or drilling any initial wells within the Wolfcamp pool.

2. Working interest owners and their share of the working interest within the subject acreage are not uniform between the Bone Spring and Wolfcamp formations. Some owners in the Wolfcamp formation own a larger proportion of working interest in the Wolfcamp formation than they do in the Bone Spring formation. And some owners in the Wolfcamp formation do not own any interests in the Bone Spring formation.

3. Read & Stevens proposes to complete its proposed initial wells using a staggered and stacked "wine-rack" pattern across all its targeted zones with simultaneous completions across the Third Bone Spring and Wolfcamp targets at a density of 24 wells per section. In contrast, Cimarex proposes completed intervals in a vertically stacked pattern within only the Bone Spring pool at a density of 12 wells per section.

4. Read & Stevens' proposed horizontal spacing and wine-rack pattern takes into consideration the location and setbacks of existing and planned horizontal wells in offsetting spacing units, in particular Permian Resources' operated Riddler Bone Spring and Wolfcamp spacing units immediately adjacent to the east approved under Order Nos. R-22748 through R-22754.

5. There are no faults, pinch outs, or other geologic impediments to efficiently and effectively developing Read & Stevens' proposed Bone Spring and Wolfcamp spacing units with two-mile horizontal wells.

Cimarex's plan to try to develop and pool the entire Wolfcamp formation through wells drilled and completed in the Bone Spring will (1) violate the statutory mandate to allocate production under compulsory pooling orders on a strict acreage basis; (2) impair the correlative rights of working interest owners due to non-uniform ownership between the Bone Spring and Wolfcamp formations and harm royalty and overriding royalty interest owners; and (3) violate the Division's requirements governing pool rules and horizontal well spacing units.

In addition to these fatal defects that cannot be cured, Cimarex proposes sub-optimal spacing relative to existing and planned offsetting development and will cause substantial waste by failing to co-develop the Third Bone Spring with the Upper Wolfcamp using simultaneous wine-rack completions, as Read & Stevens proposes to do.

Read & Stevens has an extensive position across the acreage and a comprehensive development plan for the area that optimizes drilling flexibility, prevents waste by developing incremental reserves that would otherwise be lost, and protects the correlative rights of all owners and royalty interests in both target pools.

In addition, Read & Stevens' plan prioritizes re-use of produced water, capitalizes on substantial existing surface infrastructure, can leverage existing development and production to secure favorable takeaway agreements, and minimizes surface disturbance by consolidating roads, flowlines, pads, and tank batteries. As with its adjacent developments, it plans to commingle production from its Joker and Bane units into a

single battery, reducing surface impacts and minimizing waste by eliminating emissions with fewer surface facilities and potential emission sources.
