Gettysburg State 002H CTB Release
Unit Letter C, Section 16, Township 23 South, Range 34 East
Lea County, New Mexico
Incident ID: NAPP2115338013

Sir or Madam:

Tetra Tech, Inc. (Tetra Tech) was contacted by ConocoPhillips (COP) to assess a release that occurred at the Gettysburg State 002H Central Tank Battery (associated API# 30-025-40874). The release footprint is located in Public Land Survey System (PLSS) Unit Letter C, Section 16, Township 23 South, Range 34 East, in Lea County, New Mexico (Site). The approximate release point occurred at coordinates 32.31098°, -103.47764°, as shown on Figures 1 and 2.

BACKGROUND

According to the State of New Mexico C-141 Initial Report (Appendix A), the release was discovered on May 17, 2021. As documented on the C-141 form, the cause of release is stated to be from a gasket failure at the top of the fire tube causing oil and water to spray out eventually igniting and catching fire. This resulted in the approximate release of 20 barrels (bbls) of produced water and 20 barrels (bbls) of crude oil.

The release was reported to have occurred within a gravel lined facility, on the developed well pad, and with minor overspray into the pasture. The approximate release extent is shown in Figure 3. Approximately 15 bbls of produced water were recovered after the release using a vacuum truck to remove freestanding fluids. The C-141 report form for the release was submitted to the New Mexico Oil Conservation District (NMOCD) on June 1, 2021. The NMOCD assigned this release Incident ID NAPP2115338013. The release area footprint was fenced as a portion of initial response activities.

SITE CHARACTERIZATION

A site characterization was performed and no watercourses, sinkholes, residences, schools, hospitals, institutions, churches, springs, private domestic water wells, springs, playa lakes, wetlands, incorporated municipal boundaries, subsurface mines, or floodplains are located within the distances specified in 19.15.29 New Mexico Administrative Code (NMAC). The Site is in an area of low karst potential.

According to the New Mexico Office of the State Engineers (NMOSE) reporting system, there are two water wells within a ½ mile (800-meter) radius of the Site with an average depth to groundwater at 245 feet below ground surface (bgs). The site characterization data is included in Appendix B.

REGULATORY FRAMEWORK

Based upon the release footprint and in accordance with Subsection E of 19.15.29.12 NMAC, per 19.15.29.11 NMAC, the site characterization data was used to determine recommended remedial action levels (RRALs) for benzene, toluene, ethylbenzene, and xylene (collectively referred to as BTEX), total petroleum hydrocarbons (TPH), and chlorides in soil.

Based on the site characterization and in accordance with Table I of 19.15.29.12 NMAC, the remediation RRALs for the Site are as follows:

Constituent	Remediation RRAL
Chloride	20,000 mg/kg
TPH (GRO+DRO+ORO)	2,500 mg/kg
BTEX	50 mg/kg
Benzene	10 mg/kg

Additionally, in accordance with the NMOCD guidance *Procedures for Implementation of the Spill Rule (19.15.29 NMAC)* (September 6, 2019), the following reclamation requirements for surface soils (0-4 feet bgs) outside of active oil and gas operations are as follows:

Constituent	Reclamation Requirements
Chloride	600 mg/kg
TPH (GRO+DRO+ORO)	100 mg/kg

INITIAL RESPONSE AND SITE ASSESSMENT

The approximate release extent is shown in Figure 3. As mentioned above, the release area footprint was fenced as a portion of initial response. In accordance with 19.15.29.8.B.(4) NMAC, which states "the responsible party may commence remediation immediately after discovery of a release", COP elected to begin remediation of the impacted area in May 2021. According to the C-141, a vacuum truck was dispatched to remove all freestanding fluids.

In order to properly characterize the release footprint and achieve horizontal and vertical delineation of the release extent, Tetra Tech personnel conducted soil sampling following initial response activities. A total of twenty (20) borings were installed within and outside the release footprint using a hand auger and trenching on May 26, 2021. A total of five (5) borings (AH-1 through AH-5) were installed inside the release area footprint to achieve vertical delineation. A total of fifteen (15) borings (AH-6 through AH-12 and H-1 through H-8) were installed along the perimeter of the release extent as well as inside the tank battery's bermed area to achieve horizontal delineation. Soil samples collected were field screened for salinity parts per million (ppm) using an ExStik II EC 400 meter.

A total of forty-eight (48) samples were collected from the twenty (20) sampling locations and submitted to Xenco Laboratories (Xenco) in Midland, Texas to be analyzed for chlorides via EPA Method 300.0, TPH via EPA Method 8015M, and BTEX via EPA Method 8021B. A copy of the laboratory analytical report and chain-of-custody documentation are included in Appendix C.

SUMMARY OF SAMPLING RESULTS

Results from the May 2021 soil sampling event are summarized in Table 1. The analytical results associated with the interior sampling locations AH-2 through AH-4 exceeded the Site reclamation requirement for chloride (600 mg/kg) in the 0'-0.5' sample interval, as well as the 1' sample at AH-2. The interior sampling locations AH-1 through AH-5 exceeded the Site reclamation requirement for TPH (100 mg/kg) in the 0'-0.5' sample interval, with sampling locations AH-1 and AH-2 exceeding the Site reclamation requirement for TPH (100 mg/kg) down to 1 foot bgs. Additionally, the interior sampling location AH-5 exceeded the Site reclamation RRAL for TPH (100 mg/kg) in the 1'-1.5' sample interval. There were no other analytical results which exceeded the Site reclamation requirements or remediation RRALs for TPH, chlorides, or BTEX in

the interior sampling locations. The analytical results associated with the samples collected from the perimeter locations (AH-6 through AH-12 and H-1 through H-8) were below both the Site reclamation requirements and remediation RRALs for all analyzed constituents. After review of the analytical results from the sampling event, both horizontal and vertical delineation was achieved during the May 2021 soil assessment activities.

REMEDIATION ACTIVITIES

Based on the analytical results and the initial C-141, COP elected to remove the remaining impacted material within the remainder of the release footprint as shown in Figure 4. In July and August 2021, visually impacted soils were initially excavated based on the reported release footprint and the assessment data. Excavation in the impacted areas continued down to a maximum depth of 1.5 feet bgs, until a representative sample from the walls and bottom of the excavation had a field screening value inferred as lower than the reclamation requirements for the site. Photographic documentation of the release excavation is included in Appendix D.

Soils in the vicinity of sample locations AH-1, AH-3, and AH-4 were excavated to 1 foot bgs based on the assessment data. Soils in the remainder of the footprint in the vicinity of sample locations AH-2 and AH-5 were excavated to 1.5 feet bgs. Impacted soils were excavated using heavy equipment (backhoes and track hoes) until a representative sample from the walls and bottom of the excavation was below the RRALs. Areas in the vicinity of subsurface lines were hand dug to the appropriate excavation depths. Approximately 352 cubic yards of excavated material were transported to the Northern Delaware Basin Landfill near Jal, New Mexico. Copies of the waste manifests are included in Appendix E.

CONFIRMATION SAMPLING RESULTS

In accordance with 19.15.29.12(D)(1)(b) NMAC, ConocoPhillips conducted confirmation sampling of the remediated area for verification of remedial activities where each sidewall and floor sample was representative of approximately 200 square feet. A total of fifteen (15) floor samples and twenty-four (24) sidewall samples were collected during the remedial activities occurring in July and August 2021.

Confirmation samples were placed into laboratory-provided sample containers, transferred under chain-of-custody, and analyzed for TPH, BTEX, and chloride within appropriate holding times by Xenco. As this is an active, developed well pad, the confirmation samples were field screened with an ExStik EC400 for salinity. For the health and safety of onsite workers, after confirmation sampling, the open excavation was fenced off to await confirmation sample analytical results.

The total remediated area encompassed a surface area of approximately 6,700 square feet. Each confirmation sample laboratory analytical result was directly compared to the proposed RRALs to demonstrate compliance. All final confirmation soil samples (floor and sidewall) were below the respective RRALs for BTEX, TPH and chlorides. Results from the July to August 2021 confirmation sampling event are summarized in Table 2.

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury

<input type="checkbox"/> The source of the release has been stopped. <input type="checkbox"/> The impacted area has been secured to protect human health and the environment. <input type="checkbox"/> Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices. <input type="checkbox"/> All free liquids and recoverable materials have been removed and managed appropriately.
If all the actions described above have <u>not</u> been undertaken, explain why:

Per 19.15.29.8 B. (4) NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please attach a narrative of actions to date. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see 19.15.29.11(A)(5)(a) NMAC), please attach all information needed for closure evaluation.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Attach a comprehensive report (electronic submittals in .pdf format are preferred) demonstrating the lateral and vertical extents of soil contamination associated with the release have been determined. Refer to 19.15.29.11 NMAC for specifics.

Characterization Report Checklist: *Each of the following items must be included in the report.*

- Scaled site map showing impacted area, surface features, subsurface features, delineation points, and monitoring wells.
- Field data
- Data table of soil contaminant concentration data
- Depth to water determination
- Determination of water sources and significant watercourses within ½-mile of the lateral extents of the release
- Boring or excavation logs
- Photographs including date and GIS information
- Topographic/Aerial maps
- Laboratory data including chain of custody

If the site characterization report does not include completed efforts at remediation of the release, the report must include a proposed remediation plan. That plan must include the estimated volume of material to be remediated, the proposed remediation technique, proposed sampling plan and methods, anticipated timelines for beginning and completing the remediation. The closure criteria for a release are contained in Table 1 of 19.15.29.12 NMAC, however, use of the table is modified by site- and release-specific parameters.

Remediation Plan

Remediation Plan Checklist: *Each of the following items must be included in the plan.*

- Detailed description of proposed remediation technique
- Scaled sitemap with GPS coordinates showing delineation points
- Estimated volume of material to be remediated
- Closure criteria is to Table 1 specifications subject to 19.15.29.12(C)(4) NMAC
- Proposed schedule for remediation (note if remediation plan timeline is more than 90 days OCD approval is required)

Deferral Requests Only: *Each of the following items must be confirmed as part of any request for deferral of remediation.*

- Contamination must be in areas immediately under or around production equipment where remediation could cause a major facility deconstruction.
- Extents of contamination must be fully delineated.
- Contamination does not cause an imminent risk to human health, the environment, or groundwater.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. Closure

The responsible party must attach information demonstrating they have complied with all applicable closure requirements and any conditions or directives of the OCD. This demonstration should be in the form of a comprehensive report (electronic submittals in .pdf format are preferred) including a scaled site map, sampling diagrams, relevant field notes, photographs of any excavation prior to backfilling, laboratory data including chain of custody documents of final sampling, and a narrative of the remedial activities. Refer to 19.15.29.12 NMAC.

Closure Report Attachment Checklist: *Each of the following items must be included in the closure report.*

- A scaled site and sampling diagram as described in 19.15.29.11 NMAC
- Photographs of the remediated site prior to backfill or photos of the liner integrity if applicable (Note: appropriate OCD District office must be notified 2 days prior to liner inspection)
- Laboratory analyses of final sampling (Note: appropriate ODC District office must be notified 2 days prior to final sampling)
- Description of remediation activities

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. The responsible party acknowledges they must substantially restore, reclaim, and re-vegetate the impacted surface area to the conditions that existed prior to the release or their final land use in accordance with 19.15.29.13 NMAC including notification to the OCD when reclamation and re-vegetation are complete.

Receipt

The samples were received on 5/27/2021 1:27 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 5.0° C.

GC VOA

Method 8021B: Internal standard responses were outside of acceptance limits for the following samples: AH-1 1-1.5 (890-738-2), AH-3 (T-2) 0-6 (890-738-10), H-4 0-6 (890-738-44) and H-5 0-6 (890-738-45). The sample(s) shows evidence of matrix interference.

Method 8021B: Surrogate recovery for the following samples were outside control limits: AH-1 1-1.5 (890-738-2), H-4 0-6 (890-738-44) and H-5 0-6 (890-738-45). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8021B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-3592 and analytical batch 880-3699 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 8021B: Surrogate recovery for the following sample was outside control limits: AH-5 1-1.5 (890-738-21). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8021B: Internal standard responses were outside of acceptance limits for the following samples: AH-5 1-1.5 (890-738-21), AH-8 1-1.5 (890-738-29), AH-10 0-1 (890-738-32) and AH-11 1-1.5 (890-738-36). The sample(s) shows evidence of matrix interference.

Method 8021B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-3706 and analytical batch 880-3751 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

Method 8015B NM: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 880-3701 and 880-3701 and analytical batch 880-3691 recovered outside control limits for the following analytes however both are within passing range: Gasoline Range Organics (GRO)-C6-C10

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.
