Mr. Billings:

Tetra Tech, Inc. (Tetra Tech) was contacted by EOG Resources (EOG) to assess a release at the EOG Creek AL Federal Battery (API No. 30-015-10430). The release footprint is located in the Public Land Survey System (PLSS) Unit D, Section 25, Township 18 South, Range 30 East, Eddy County, New Mexico (Site). The Site coordinates are 32.72282°, -103.91761°. The site location is shown on Figures 1 and 2.

Background

According to the State of New Mexico there are two C-141 Initial Reports, the first release occurred on January 2, 2010 as a result of a load of produced water was scheduled for pick up, but the water hauler did not arrive before the tank filled and ran over. The release consisted of 10 barrels (bbls.) of produced water affecting an area of approximate 20 feet (ft.) by 20 ft within the bermed battery. During immediate response actions, a truck was called to empty the water tank. No free fluids were recovered. The initial C-141 report was submitted to the New Mexico Oil Conservation Division (NMOCD) on February 13, 2010. The release was subsequently assigned the Remediation Permit (RP) number 2RP-558 and Incident No. nKmw1101328629. The C-141 forms are included in Appendix A.

A second C-141 Initial Report was submitted to the NMOCD on March 01, 2011. The release occurred on February 19, 2011 due to the produced water tank ran over. The release consisted of 15 bbls. of produced water affecting an approximate area of 20 ft. by 20 ft. within the bermed area. During immediate response actions, a vacuum truck recovered 14 bbls. of produced water. The release was subsequently assigned the Remediation Permit (RP) number 2RP-623 and Incident No. nKmw1106136997. The C-141 forms are included in Appendix A.

Site Characterization

A site characterization was performed for the site, and no watercourses, lakebeds, sinkholes, playa lakes, residences, schools, hospitals, institutions, churches, springs, private domestic water wells, wetlands, incorporated municipal boundaries, subsurface mines, or floodplains are located within the specified distances, and the site is in a medium karst potential area. The nearest well is listed in the USGS National Water Information Database website in Section 26, approximately 1.3 miles southwest of the site, and has a reported depth to groundwater of 183.99 feet below ground surface last sample on 1994. In addition, according to the New Mexico Office of the State Engineer, there are no water wells within 800 meters ($\frac{1}{2}$ miles) radius. However, there are six (6) water wells are located within 7,200 meters (approximately 4.5 miles) of the Site. The average depth to groundwater is 92 ft. bgs. Site characterization data is included in Appendix B.

Regulatory

A risk-based evaluation was performed for the site per the New Mexico Oil Conservation Division (NMOCD) Guidelines for Remediation of Leaks, Spills and Releases, updated August 14, 2018. The guidelines require a risk-based evaluation of the site to determine recommended remedial action levels (RRAL) for benzene, toluene, ethylbenzene and xylene (collectively referred to as BTEX) and total petroleum hydrocarbons (TPH) in soil. The proposed RRAL for benzene was determined to be 10 parts per million (ppm) or milligrams per kilogram (mg/kg) and 50 ppm for total BTEX (sum of benzene, toluene, ethylbenzene, and xylene). Based on the site characterization, the proposed RRAL for TPH is 100 mg/kg (GRO+DRO+MRO). Additionally, based on the site characterization, the proposed RRAL for chlorides is 600 mg/kg.

Soil Assessment and Analytical Results

On March 1, 2021, Tetra Tech personnel were on site to evaluate and sample the release area. The formerly impacted area was identified from the description in the C-141 and the aerial imagery. Soils were field screened for salinity using an Extech EC400 ExStik to determine sampling intervals. A total of two (2) auger holes (AH-1 and AH-2) were advanced to a total depth from surface to 3 ft. bgs. In addition, four (4) horizontal samples (H-1 through H-4) were installed along the perimeter of the release footprint to the north, east, west and south to a total depth of 0.5 ft. bgs. A total of ten (10) samples were analyzed for TPH analysis by EPA method 8015 modified, BTEX by EPA Method 8021B and chloride by EPA method 300.0. Copies of laboratory analysis and chain-of-custody documentation are included in Appendix D. The results of the sampling are summarized in Table 1. The auger hole locations are shown on Figure 3. Photographic documentation is included.

Referring to Table 1, the sample locations (AH-1 and AH-2) exceeded the Site RRAL for TPH (100 mg/kg) at the upper 3 ft. bgs. Horizontal delineation samples were below the Site RRAL for chloride (600 mg/kg), BTEX (50 m/kg) and benzene (10 mg/kg).

Remediation Activities

Between April 8th and June 4th, 2021, Tetra Tech personnel were on site to supervise the excavation and remediation activities in order to remove the impacted soil from the release area. The excavated areas are shown on Figure 4. Three (3) areas were excavated to a total depths of

**TETRA TECH**

2.5 ft. bgs. and 3.5 ft. bgs. Once the excavations were complete, confirmation samples were collected for every 200 sq. ft. One (1) bottom hole sample (BH-1) was collected at the north excavation area and two (2) bottom hole samples (BH-2 and BH-3) were collected at the south excavation area. In addition, (16) sidewall samples (SW-1 through SW-16) were collected at the three excavated areas. The impacted area was treated with Microblaze to reduce the Site levels of TPH. A total of nineteen (19) samples were analyzed for TPH analysis by EPA method 8015 modified, BTEX by EPA Method 8021B and chloride by EPA method 300.0. Copies of laboratory analysis and chain-of-custody documentation are included in Appendix D. The results of the sampling are summarized in Table 2.

Referring to Table 2, all final confirmation samples analyzed were below the Site RRAL for chloride (600 mg/kg), TPH (100 mg/kg), BTEX (50 m/kg) and benzene (10 mg/kg).

The excavation areas were backfilled with clean material to surface grade. Approximately 112 cubic yards of material was transported offsite for proper disposal.

Conclusion

Based on the laboratory results and remediation activities performed, EOG requests closure of this spill issue. The final C-141 initial reports are enclosed in Appendix A. If you have any questions or comments concerning the assessment or remediation activities for this site, please call at (432) 682-4559.

A load of produced water was scheduled for pick up, but the water hauler did not arrive before the tank filled and ran over. No produced water to recover, truck called to empty water tank.

Describe Area Affected and Cleanup Action Taken.*

An approximate area of 20' X 20'. All water remained within bermed battery. Vertical and horizontal delineation samples will be taken and analysis ran for TPH & BTX. Chlorides will be documented. If results are above RRAL's for site ranking of zero (0), a work plan or corrective action plan will be submitted. If results are below RRAL's for site ranking of zero (0), a Final Report C-141 will be submitted requesting closure. Depth to Ground Water: >100' (approximately 184'), Wellhead Protection Area: No, Distance to Surface Water Body: >1000', SITE RANKING IS 0.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NM OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NM OCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NM OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the Eurofins Xenco, LLC Report Number(s) 690616. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by Eurofins Xenco, LLC. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. Flagging Criteria

- X** In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.
- B** A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- D** The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
- E** The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- F** RPD exceeded lab control limits.
- J** The target analyte was positively identified below the quantitation limit and above the detection limit.
- U** Analyte was not detected.
- L** The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
- H** The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
- K** Sample analyzed outside of recommended hold time.
- JN** A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

** Surrogate recovered outside laboratory control limit.

GC VOA

Method 8021B: Surrogate recovery for the following samples were outside control limits: H-1 (880-1334-1), H-3 (880-1334-3), H-4 (880-1334-4), SW-2 (880-1334-6), SW-5 (880-1334-9), SW-10 (880-1334-14), SW-11 (880-1334-15), SW-13 (880-1334-17), SW-15 (880-1334-19) and BH-1 (880-1334-21). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8021B: Internal standard responses were outside of acceptance limits for the following samples: SW-1 (880-1334-5), SW-3 (880-1334-7), SW-4 (880-1334-8), SW-7 (880-1334-11), SW-9 (880-1334-13), SW-13 (880-1334-17), SW-15 (880-1334-19), BH-2 (880-1334-22) and BH-3 (880-1334-23). The sample(s) shows evidence of matrix interference.

Method 8021B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-1872 and analytical batch 880-1897 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 8021B: Surrogate recovery for the following sample was outside control limits: SW-14 (880-1334-18). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Receipt

The samples were received on 4/29/2021 11:26 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 0.5° C.

GC VOA

Method 8021B: Internal standard responses were outside of acceptance limits for the following samples: SW 11 (880-1719-6) and SW 13 (880-1719-8). The sample(s) shows evidence of matrix interference.

Method 8021B: Surrogate recovery for the following sample was outside control limits: BH-3 (2.5') (880-1719-11). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

Method 8015B NM: The continuing calibration verification (CCV) associated with batch 880-2484 recovered above the upper control limit for < Diesel Range Organics (Over C10-C28)>. The samples that took a detection in this range were reanalyzed to confirm the detection, therefore the data is reportable.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

The sample was received on 5/21/2021 9:46 AM. Unless otherwise noted below, the sample arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 4.6°C

GC VOA

Method 8021B: Surrogate recovery for the following sample was outside control limits: SW-15 (2-3) (880-2356-1). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA

Method 8015MOD_NM: The continuing calibration verification (CCV) associated with batch 880-3369 recovered above the upper control limit for Diesel Range Organics (Over C10-C28) The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The samples associated with this CCV that had a detection in this range were only reported if there were multiple runs to confirm.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC VOA

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA

Method 8015MOD_NM: Manual integration was performed on the following samples: SW-15 (880-2754-1), BH-3 (880-2754-2) and (890-776-A-1-H). A manual integration was performed on these jobs because baseline rise in the >C12-C28 hydrocarbon range and the >C28-C35 hydrocarbon range created a false detection.
