**Glenn Springs Holdings, Inc.**  
**E.C. Hill "A, B and C" Tank Battery**  
**Section 27, Township 23 South, Range 37 East**  
**Lea County, New Mexico**  
**1RP-440 and 1RP-462**

Mr. Rose-Coss,

This report summarizes the results of the semi-annual sampling events that occurred in 2019 for the E. C. Hill A, B and C Tank Battery (Site). The Site is located in Lea County, Section 27, Township 23 South, Range 37 East, approximately 11 miles south of Eunice, New Mexico. The GPS coordinates for the Site are 32.272283°N, 103.151018°W. Prior to being operated by OXY, the facility was operated by Plains Exploration and Production, Pogo Producing Company (Pogo) and Chevron Mid-Continent. The Site location is shown on **Figures 1 and 2**.

### **FACILITY BACKGROUND**

This facility is a historic tank battery, which accumulated numerous spills from previous operators. Prior to being operated by OXY, the facility was operated by Plains Exploration and Production, Pogo Producing Company (Pogo) and Chevron Mid-Continent. During Pogo's operation of this facility, several documented spills occurred at the facility. The majority of the spills occurred around production equipment and active underground lines. Pogo had proposed deferring all major cleanup activities on the inaccessible areas of the tank battery until the tank battery was abandoned.

In November 2003, Pogo decided to shut down all production to the tank battery and removed all tanks, vessels, equipment and lines in order to make the former tank battery location accessible to perform further assessment. Once the facility was dismantled, the impacted soils were excavated in the areas of the tanks, vessels and lines. In February 2004, fifteen test trenches were excavated to a depth of 5 feet below ground surface (bgs) throughout the former tank battery location to delineate the extent of impacted soils. The trenches were found to be impacted with elevated levels of Total Petroleum Hydrocarbons (TPH), Benzene, Toluene, Ethylbenzene and Xylenes (BTEX) and Chlorides. Based on the results of the trenching, it was decided that soil borings would be required to complete the delineation at the site.

Between May and August 2005, thirteen boreholes were installed throughout the former tank battery area. The soil laboratory results indicated the Site was impacted to groundwater with elevated levels of TPH, BTEX and chlorides. It was evident from the

Review of 2020 Groundwater Monitoring Report: Content satisfactory

1. Continued semi-annual groundwater monitoring and PSH recovery system operation
2. Submit the Annual Monitoring Report to the OCD no later than March 31, 2022

TETRA TECH

boreholes and excavations performed at the site that there was very little lateral migration of hydrocarbons in subsurface soils and the impact was defined. In order to prevent leaching of the surrounding soils to groundwater, a 40-mil thick plastic liner (CAP) was installed in the excavation measuring 100' by 180'. The liner was installed to a depth of 3.5 feet bgs with the impacted excavated soils placed beneath the liner to prevent leaching. Once placed in the ground, the liner was backfilled, and the excavation brought up to grade with clean soils.

Between September 2004 and July 2006, Pogo installed five monitor wells (MW-1 through MW-5) to assess the groundwater impacts to the Site. Monitor well MW-1 was installed immediately south of the excavation, while monitor wells MW-2 and MW-3 were installed north of the excavation. Monitor wells MW-4 and MW-5 were installed to the east and southeast of the excavation. Phase separated hydrocarbons (PSH) were measured in monitor well MW-1, while dissolved phase hydrocarbons were detected in monitor wells MW-3, MW-4 and MW-5 at concentrations below the New Mexico Water Quality Control Commission (NMWQCC) standards.

Between May 2, 2011 and May 11, 2011, OXY installed two recovery wells (RW-1 and RW-2) for PSH recovery. Recovery well RW-1 was installed just north of monitor well MW-1, whereas recovery well RW-2 was installed just southwest of monitor well MW-3. PSH were measured in both recovery well RW-1 and recovery well RW-2.

On September 29, 2015, one permanent monitor well (MW-6) was installed to the northeast and one temporary monitor well (TMW-7) was installed to the southwest of the Site. Temporary monitor well TMW-7 was plugged and abandoned on March 2, 2016. The locations of all monitor and recovery wells are depicted on **Figure 3**.

### **RECOVERY SYSTEM OPERATIONS AND MAINTENANCE**

During 2014, QED™ skimmer pumps were installed in monitor wells MW-1 and MW-2 and a Xitech skimmer pump was installed in recovery well RW-1 for the recovery of PSH. The skimmer pumps operate with solar recharged battery power and a nitrogen bottle. The PSH from each well was pumped into drums inside secondary containment where it is periodically removed for offsite disposal. System schematics are included in **Appendix A**. An estimated volume of 30 gallons of phase separated product (PSH) was recovered during 2019, bringing the estimated total volume of PSH recovered since the system started in 2014 to 1,007 gallons.

### **GAUGING AND MONITOR WELL SAMPLING**

In 2019, Tetra Tech Inc. personnel were onsite to gauge monitor wells MW-1, MW-2, MW-3, MW-4, MW-5, MW-6, RW-1, and RW-2 on a semi-annual basis. All of the wells on site were gauged with an electronic interface probe to the nearest 0.01 foot. The gauging data is summarized in **Table 1**. During all of the 2019 sampling events, PSH were measured in two monitor wells (MW-1 and MW-3) and in both recovery wells (RW-1 and RW-2). The range of PSH thickness measured during the 2019 sampling events were as follows: (MW-1), 1.79 – 2.10 feet; (MW-3), 1.45 – 2.18 feet; (RW-1), 2.47 – 2.52 feet and (RW-2), 2.52 – 6.04 feet. Utilizing the water level elevation calculations, groundwater gradient maps were generated for the February 7, 2019 and August 8, 2019 sampling events. The groundwater gradient in 2019 was to the southeast which is consistent with previous years. Groundwater gradient maps for the two 2019 sampling events are included as **Figure 4** and **Figure 5**.

TETRA TECH

During each groundwater sampling event, the monitor wells were purged to remove approximately three well casing volumes of water using disposable rope or twine with a new polyethylene bailer for each well. The sample bottles were filled directly from the bailers. The sample bottles were placed on ice and shipped under proper chain-of-custody control to ALS Laboratories of Houston, Texas for analysis of BTEX by EPA Method SW8260 and chlorides by EPA Method E300.

Analytical results indicate that BTEX concentrations were below method detection limits for all monitor wells sampled during all 2019 sampling events.

Chloride analytical results for monitor wells MW-2 and MW-5, were below the 250 milligrams per liter (mg/L) NMWQCC standard during the two 2019 sampling events. The chloride analytical results for MW-4 and MW-6 exceeded the NMWQCC standards during both 2019 sampling events. Chloride concentrations in monitor well MW-4 decreased from 602 mg/L on February 7, 2019 to 555 mg/L on August 8, 2019. Chloride concentrations in monitor well MW-6 decreased from 1,000 mg/L on February 7, 2019 to 887 mg/L on August 8, 2019.

Graphs of chloride concentrations versus groundwater elevations for monitor wells MW-2, MW-4, MW-5, and MW-6 are included in **Appendix B**. These graphs indicate generally stable chloride concentrations in monitor well MW-2 and fluctuations within the historic range of concentrations in monitor well MW-5. For the two monitor wells with chloride concentrations exceeding the NMWQCC standards, chloride concentrations in downgradient monitor well MW-4 have been fluctuating within the historic range of previously detected concentrations and chloride concentrations in cross-gradient monitor well MW-6 generally increased between 2017 and February 7, 2019 but significantly decreased during the August 8, 2019 sampling event.

Chloride concentration maps for the two 2019 sampling events are included as **Figures 6** and **7**. The groundwater analytical data is summarized in **Table 2**. Copies of the laboratory analytical reports are included in **Appendix C**.

## **CONCLUSIONS**

1. The chloride analytical results for monitor wells MW-4 and MW-6 exceeded the NMWQCC standards during both 2019 sampling events which is consistent with previous results. Chloride concentrations in monitor wells MW-4 and MW-6 decreased over the reporting period.
2. Chloride concentrations for monitor wells MW-2 and MW-5 were below the NMWQCC standard of 250 mg/L during both 2019 sampling events which is consistent with previous results.
3. Analytical results indicate that at all four wells sampled had no BTEX concentrations exceeding the method detection limits.
4. A total estimated volume of 1,007 gallons of PSH has been recovered by the remediation system between startup in 2014 and December 2019.

## **PROPOSED 2020 GROUNDWATER MONITORING PROGRAM**

Continued semiannual groundwater monitoring and PSH recovery system operations are proposed for 2020.

If you have any questions or comments concerning this report, please feel free to contact Ray Cheatham at (713) 203-0852.

Respectfully submitted,

( - ) No data (TOC) Top of casing

(MW-1 and MW-3) Groundwater elevation corrected using 0.75 specific gravity

NM - Not Measured

NA - Top of Casing Elevation not available

NG - Not Gauged, instrument malfunction

TOC elevations resurveyed by John West Survey Company on October 29, 2015. This was the initial survey-for MW-6, TMW-7, RW-1 and RW-2.

TMW-7 plugged on March 2, 2016.

8/26/2016, LNAPL Specific Gravity analysis: RW-1 = 0.824 and MW-3 = 0.826, used to correct groundwater elevations Specific Gravity of 0.824 to correct RW-1 and MW-1; SG = 0.826 to correct RW-2 and MW-3 groundwater elevations

PO Box 2148

Houston, TX 77252-2148

Work Order: **HS19020503**

Laboratory Results for: **55628DM GSHI PXP Hill E.C. ABC TB**

Dear James,

ALS Environmental received 6 sample(s) on Feb 08, 2019 for the analysis presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested. Results are expressed as "as received" unless otherwise noted.

QC sample results for this data met EPA or laboratory specifications except as noted in the Case Narrative or as noted with qualifiers in the QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained by ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

If you have any questions regarding this report, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "Dane J. Wacasey".

Laboratory Results for: **55628DM GSHI PXP Hill E.C. ABC TB**

Dear James,

ALS Environmental received 6 sample(s) on Aug 09, 2019 for the analysis presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested. Results are expressed as "as received" unless otherwise noted.

QC sample results for this data met EPA or laboratory specifications except as noted in the Case Narrative or as noted with qualifiers in the QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained by ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

If you have any questions regarding this report, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "Dane J. Wacasey".

**QUALIFIERS,  
ACRONYMS, UNITS**

<b>Qualifier</b>	<b>Description</b>
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte detected below quantitation limit
M	Manually integrated, see raw data for justification
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL/SDL

<b>Acronym</b>	<b>Description</b>
DCS	Detectability Check Study
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
MBLK	Method Blank
MDL	Method Detection Limit
MQL	Method Quantitation Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PDS	Post Digestion Spike
PQL	Practical Quantitaion Limit
SD	Serial Dilution
SDL	Sample Detection Limit
TRRP	Texas Risk Reduction Program

<b>Unit Reported</b>	<b>Description</b>
µg/L	Micrograms per Liter
mg/L	Milligrams per Liter
