**UPSET FLARING EVENT SPECIFIC JUSTIFICATIONS FORM****Facility:** Corral 2S CS**Flare Date:** 04/01/2022**Duration of event:** 50 Minutes**MCF Flared:** 556**Start Time:** 03:05 PM**End Time:** 03:50 PM**Cause:** Miscommunications**Method of Flared Gas Measurement:** Gas Flare Meter**Comments:** This upset event was not caused by any wells associated with the facility.

---

**1. Reason why this event was beyond Operator's control:**

The emissions event was caused by the unforeseen, unexpected, sudden, and unavoidable interruption, restriction or complete shut-in of a gas pipeline by a third-party pipeline operator, which impacted Oxy's ability to send gas to a third-party gas pipeline. This interruption, restriction or complete shut-in of the gas pipeline by a third-party pipeline operator is downstream of Oxy's custody transfer point and out of Oxy's control to avoid or prevent from happening and did not stem from any of Oxy's upstream facility activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and preventative maintenance practices. Internal Oxy procedures ensure that upon a sudden and unexpected flaring event, production techs are promptly notified, and are instructed to assess the issue as soon as possible to take prompt corrective action and minimize emissions. Oxy production techs must assess and determine cause of flaring at its upstream facility. In this case, ETC had completed its maintenance activities and was scheduled to begin receiving gas from OXY, yet due to the fact of a time zone miscommunication and additional miscommunication between Enterprise, ETC and Oxy personnel as to when to open and close specific valves to send and receive gas, a flaring event occurred. Oxy was scheduled to send gas sales to ETC at 9:00 am, MDT, while Enterprise personnel at their downstream New Mexico facility, were instructed to shut their valve off to Oxy at 9:25 am, CDT, which was shut at 8:25 am, MDT, triggering a flaring event. An Oxy production tech arrived at our facility at 9:00 am, MDT, and waited for the ETC tech to open their valve to received gas again and for such action to be communicated when it occurred, yet Oxy production tech did not know that ETC's tech had arrived earlier and had already opened their valve at 08:35 AM, CDT. The Oxy production tech was waiting for communication from ETC that such action was occurring or about to occur, so that gas could be sent. Once miscommunication was cleared up and gas routed back to ETC, flaring ceased at 09:40 AM.

**2. Steps Taken to limit duration and magnitude of venting or flaring:**

It is OXY's policy to route all stranded gas to a flare during an unforeseen and unavoidable emergency or malfunction, that is beyond Oxy's control to avoid, prevent or foresee, to minimize emissions as much as possible as part of the overall steps taken to limit duration and magnitude of flaring. The flare at this facility has a 98% combustion efficiency to lessen emissions as much as possible. In this case, ETC had a planned maintenance activity scheduled, which prompted Oxy to coordinate with Enterprise personnel for a scheduled switchover, while ETC conducted their maintenance activities. Due to a misunderstanding regarding specific time zones for the states of Texas and New Mexico, an unexpected flaring event occurred. ETC failed to communicate to OXY that their technician had opened their valve an hour earlier than

previously scheduled, on Texas time zone, to receive Oxy's gas when it was scheduled via New Mexico time zone, which is an hour later than Texas time. Oxy personnel were waiting for communication from Enterprise that their valve was open to send its gas, and not being informed of such, Oxy routed its gas to flare, given that ETC had closed their valve for service at 09:25 A.M.

**3. Corrective Actions taken to eliminate the cause and reoccurrence of venting or flaring:**

The corrective actions OXY will take to eliminate the cause and reoccurrence of this type of flaring from a miscommunication regarding time zones, is for OXY personnel to confirm coordinated schedules and specific time zones when coordinating dual operator efforts shut-ins, maintenance activities, etc.

QUESTIONS

Action 99582

**QUESTIONS**

Operator: OXY USA INC P.O. Box 4294 Houston, TX 772104294	OGRID: 16696
	Action Number: 99582
	Action Type: [C-129] Amend Venting and/or Flaring (C-129A)

**QUESTIONS**

<b>Prerequisites</b>	
Any messages presented in this section, will prevent submission of this application. Please resolve these issues before continuing with the rest of the questions.	
Incident Operator	[16696] OXY USA INC
Incident Type	Flare
Incident Status	Closure Not Approved
Incident Well	Not answered.
Incident Facility	[fAPP2126640958] CORRAL #2 SOUTH COMP STATION
Only valid Vent, Flare or Vent with Flaring incidents (selected above in the Application Details section) that are assigned to your current operator can be amended with this C-129A application.	

**Determination of Reporting Requirements**

Answer all questions that apply. The Reason(s) statements are calculated based on your answers and may provide additional guidance.

Was this vent or flare caused by an emergency or malfunction	Yes
Did this vent or flare last eight hours or more cumulatively within any 24-hour period from a single event	No
Is this considered a submission for a vent or flare event	Yes, major venting and/or flaring of natural gas.
An operator shall file a form C-141 instead of a form C-129 for a release that, includes liquid during venting and/or flaring that is or may be a major or minor release under 19.15.29.7 NMAC.	
Was there <b>at least 50 MCF</b> of natural gas vented and/or flared during this event	Yes
Did this vent or flare result in the release of <b>ANY</b> liquids (not fully and/or completely flared) that reached (or has a chance of reaching) the ground, a surface, a watercourse, or otherwise, with reasonable probability, endanger public health, the environment or fresh water	No
Was the vent or flare within an incorporated municipal boundary or withing 300 feet from an occupied permanent residence, school, hospital, institution or church in existence	No

**Equipment Involved**

Primary Equipment Involved	Other (Specify)
Additional details for Equipment Involved. Please specify	Emergency Flare > Miscommunications

**Representative Compositional Analysis of Vented or Flared Natural Gas**

Please provide the mole percent for the percentage questions in this group.

Methane (CH4) percentage	76
Nitrogen (N2) percentage, if greater than one percent	1
Hydrogen Sulfide (H2S) PPM, rounded up	0
Carbon Dioxide (CO2) percentage, if greater than one percent	0
Oxygen (O2) percentage, if greater than one percent	0
If you are venting and/or flaring because of Pipeline Specification, please provide the required specifications for each gas.	
Methane (CH4) percentage quality requirement	Not answered.
Nitrogen (N2) percentage quality requirement	Not answered.
Hydrogen Sulfide (H2S) PPM quality requirement	Not answered.
Carbon Dioxide (CO2) percentage quality requirement	Not answered.
Oxygen (O2) percentage quality requirement	Not answered.

QUESTIONS, Page 2

Action 99582

QUESTIONS (continued)

Operator:  OXY USA INC P.O. Box 4294 Houston, TX 772104294	OGRID:  16696
	Action Number:  99582
	Action Type:  [C-129] Amend Venting and/or Flaring (C-129A)

QUESTIONS

Date(s) and Time(s)	
Date vent or flare was discovered or commenced	04/01/2022
Time vent or flare was discovered or commenced	08:50 AM
Time vent or flare was terminated	09:40 AM
Cumulative hours during this event	1

Measured or Estimated Volume of Vented or Flared Natural Gas	
Natural Gas Vented (Mcf) Details	Not answered.
Natural Gas Flared (Mcf) Details	Cause: Other   Other (Specify)   Natural Gas Flared   Released: 556 Mcf   Recovered: 0 Mcf   Lost: 556 Mcf ]
Other Released Details	Not answered.
Additional details for Measured or Estimated Volume(s). Please specify	Gas Flare Meter
Is this a gas only submission (i.e. only significant Mcf values reported)	Yes, according to supplied volumes this appears to be a "gas only" report.

Venting or Flaring Resulting from Downstream Activity	
Was this vent or flare a result of downstream activity	Yes
Was notification of downstream activity received by this operator	No
Downstream OGRID that should have notified this operator	[267255] ENERGY TRANSFER PARTNERS, LP
Date notified of downstream activity requiring this vent or flare	Not answered.
Time notified of downstream activity requiring this vent or flare	Not answered.

Steps and Actions to Prevent Waste	
For this event, this operator could not have reasonably anticipated the current event and it was beyond this operator's control	True
Please explain reason for why this event was beyond this operator's control	The emissions event was caused by the unforeseen, unexpected, sudden, and unavoidable interruption, restriction or complete shut-in of a gas pipeline by a third-party pipeline operator, which impacted Oxy's ability to send gas to a third-party gas pipeline. This interruption, restriction or complete shut-in of the gas pipeline by a third-party pipeline operator is downstream of Oxy's custody transfer point and out of Oxy's control to avoid or prevent from happening and did not stem from any of Oxy's upstream facility activity that could have been foreseen and avoided, and could not have been avoided by good design, operation, and preventative maintenance practices. Internal Oxy procedures ensure that upon a sudden and unexpected flaring event, production techs are promptly notified, and are instructed to assess the issue as soon as possible to take prompt corrective action and minimize emissions. Oxy production techs must assess and determine cause of flaring at its upstream facility. In this case, ETC had completed its maintenance activities and was scheduled to begin receiving gas from OXY, yet due to the fact of a time zone miscommunication and additional miscommunication between Enterprise, ETC and Oxy personnel as to when to open and close specific valves to send and receive gas, a flaring event occurred. Oxy was scheduled to send gas sales to ETC at 9:00 am, MDT, while Enterprise personnel at their downstream New Mexico facility, were instructed to shut their valve off to Oxy at 9:25 am, CDT , which was shut at 8:25 am, MDT, triggering a flaring event. An Oxy production tech arrived at our facility at 9:00 am, MDT, and waited for the ETC tech to open their valve to received gas again and for such action to be communicated when it occurred, yet Oxy production tech did not know that ETC's tech had arrived earlier and had already opened their valve at 08:35 AM, CDT.
Steps taken to limit the duration and magnitude of vent or flare	It is OXY's policy to route all stranded gas to a flare during an unforeseen and unavoidable emergency or malfunction, that is beyond Oxy's control to avoid, prevent or foresee, to minimize emissions as much as possible as part of the overall steps taken to limit duration and magnitude of flaring. The flare at this facility has a 98% combustion efficiency to lessen emissions as much as possible. In this case, ETC had a planned maintenance activity scheduled, which prompted Oxy to coordinate with Enterprise personnel for a scheduled switchover, while ETC conducted their maintenance activities. Due to a misunderstanding regarding specific time zones for the states of Texas and New Mexico, an unexpected flaring event occurred. ETC failed to communicate to OXY that their technician had opened their valve an hour earlier than previously scheduled, on Texas time zone, to receive Oxy's gas when it was scheduled via New Mexico time zone, which is an hour later than Texas time. Oxy personnel were waiting for communication from Enterprise that their valve was open to send its gas, and not being informed of such, Oxy routed its gas to flare, given that ETC had closed their valve for service at 09:25 A.M.
Corrective actions taken to eliminate the cause and reoccurrence of vent or flare	The corrective actions OXY will take to eliminate the cause and reoccurrence of this type of flaring from a miscommunication regarding time zones, is for OXY personnel to confirm coordinated schedules and specific time zones when coordinating dual operator efforts shut-ins, maintenance activities, etc.

**ACKNOWLEDGMENTS**

<input checked="" type="checkbox"/>	I acknowledge that with this application I will be amending an existing incident file (assigned to this operator) for a vent or flare event, pursuant to 19.15.27 and 19.15.28 NMAC.
<input checked="" type="checkbox"/>	I acknowledge that amending an incident file does not replace original submitted application(s) or information and understand that any C-129 forms submitted to the OCD will be logged and stored as public record.
<input checked="" type="checkbox"/>	I hereby certify the statements in this amending report are true and correct to the best of my knowledge and acknowledge that any false statement may be subject to civil and criminal penalties under the Oil and Gas Act.
<input checked="" type="checkbox"/>	I acknowledge that the acceptance of any C-129 forms by the OCD does not relieve this operator of liability should their operations have failed to adequately investigate, report, and remediate contamination that poses a threat to groundwater, surface water, human health, or the environment.
<input checked="" type="checkbox"/>	I acknowledge that OCD acceptance of any C-129 forms does not relieve this operator of responsibility for compliance with any other applicable federal, state, or local laws and/or regulations.
