1. Introduction

On behalf of Earthstone Operating, LLC (Earthstone), New Tech Global Environmental, LLC (NTGE) has prepared this closure/deferral report to document site assessment and remedial action activities at the Salt Draw 10 State Com Battery (Site). The site is located in Unit Letter B, Section 10, of Township 25 South and Range 28 East in Eddy County, New Mexico. The GPS coordinates for the release site are 32.150936° N and -104.071110 W. The release occurred on State land. Figures 1 and 2 depict the site location, while Figure 3 details site facility production and confirmation sample locations.

2. Background

Based on the Release Notification C-141 obtained from the New Mexico Oil Conservation Division (NMOCD), the release occurred on December 23, 2022. The initial C-141 was submitted to the NMOCD on January 6, 2023, affirming the release was caused by a frozen line from wellhead going the supply gas pot, which caused the dumps to stop working releasing fluid from the flare. Approximately 20 barrels (bbls) of crude oil were released, with approximately 0 bbls recovered, for a loss of 20 bbls of crude oil.

The release falls under the jurisdiction of the NMOCD District 2 Office in Artesia, New Mexico. The Release Notification, Site Assessment/Characterization, Remediation Plan and Closure portions of form C-141 for incident number nAPP2300658682 are attached to the front of this report.

3. Site Characterization

Based on a review of the New Mexico Office of State Engineers and USGS databases, there are no known water sources within a half mile radius of the Site. No other receptors (playas, wetlands, waterways, lakebeds, or ordinance boundaries) were located within each specific boundary or distance from the Site. According to the Karst map, the site is located within a high Karst area. The Site characterization documentation (Points of Diversion, Karst Potential, Significant Watercourse Map, Wetlands Map, and FEMA Map) are provided in Attachment A.

NTGE characterized the Site according to Table I, Closure Criteria for Soils Impacted by a Release, from New Mexico Administrative Code (NMAC) Title 19, Chapter 15, Part 29, Section 12 (NMAC 19.15.29.12).

General Site Characterization and Groundwater:

Site Characterization	Average Groundwater Depth (ft)
High Karst	Unknown

Table 3.1 Closure Criteria for Soils Impacted by a Release (NMAC 19.15.29.12)

Regulatory Standard	Chloride	TPH (GRO+DRO+MRO)	TPH (GRO+DRO)	BTEX	Benzene

Notes: --- = not defined					

4. Remedial Action Activities, Confirmation Sampling, and Extension Request

On February 16, 2023, NTGE and Standard Safety and Supply (Standard) mobilized to the site to begin remediation activities. During and upon completion of the remediation, composite bottom hole and sidewall confirmation samples were collected by way of a five (5) point composite sample from areas representing no greater than two hundred (200) square feet. The confirmation samples were analyzed for BTEX (EPA Method 8021B), TPH (EPA Method 8015 Modified), and chloride (Method 4500 CL-B or EPA 300.0).

On March 1, 2023, a confirmation sampling event was conducted by NTGE whereby sixty (60) bottom hole composite samples (CS-1 through CS-60) and eighteen (18) sidewall composite samples (SW-1 through SW-18) were collected. Additionally, eight (8) berm samples (Berm-1 through Berm-8) were collected on the surface and south of the excavation along the southern edge of the pad by the earthen berm to vertically delineate impacted soils in the area. All samples were submitted for analysis to Eurofins in Carlsbad, New Mexico. Analytical results indicated that eleven (11) bottom hole confirmation samples (CS-1, CS-7, CS-18, CS-20, CS-23, CS-25, CS-26, CS-27, CS-28, CS-51, and CS-52) and nine (9) sidewall composite samples (SW-1, SW-3 through SW-6, SW-10 through SW-12, and SW-18) exhibited TPH and/or chloride concentrations exceeded Table I Closure Criteria. Analytical results for the berm samples were all below regulatory standards, except for (Berm-5), which exhibited TPH concentrations above the regulatory limit.

On March 28, 2023, after further excavation by Standard, NTGE returned to the site for a second confirmation sampling event, whereby fifteen (15) bottom hole composite samples (CS-1, CS-7, CS-18, CS-20, CS-23, CS-25 through 28, CS-51, CS-52, and CS-61 through CS-64), twenty-six (26) sidewall composite samples (SW-1A, SW-4A, SW-5A, SW-6A, SW-12A, SW-18A, SW-19 through SW31, and SW-32 through SW-38), and one (1) composite berm sample (Berm-5A) was collected and submitted to Cardinal Laboratories, New Mexico (Cardinal) for analysis. Sidewall samples SW-3 and SW-10 couldn't be further excavated due to the proximity of the tank battery and flare trailer, respectively. In order to delineate these two (2) samples points, two (2) deferral delineation samples (HD-1 and HD-2) were collected at (0-0.5') ft below ground surface (bgs) to ensure horizontal delineation was achieved for impacts being left in-situ around the tank battery and flare trailer. Figure 4 shows the location of HD-1 and HD-2. Analytical results indicated that SW-31 exhibited TPH concentrations that were above the Table I Closure Criteria. Analytical results indicated that all deferral samples, and the berm sample (Berm-5A) were below Table 1 closure criteria.

The area represented by sidewall confirmation sample SW-31 was further excavated by Standard. On April 6, 2023, NTGE returned to the site for a third confirmation sampling event whereby one (1) sidewall composite sample (SW-31A) was collected and submitted to Cardinal Labs in Hobbs, New Mexico. Analytical results indicated that SW-31A was under the Table 1 Closure Criteria for benzene, BTEX, TPH, and chlorides. Figure 3, Confirmation Sampling Map depicts the final excavation extent and confirmation sample locations. Analytical results are provided on Table 1, Summary of Soil Analytical Data – Confirmation Samples, and in the Laboratory Analytical Reports provided in Appendix E. A photographic log is included in Attachment B. Confirmation Sampling Notifications are provided in Attachment C.

On March 2, 2023, NTGE on behalf of Earthstone submitted an email requesting an extension for the project remediation activities. The extension was granted on March 29, 2023, by the NMOCD for an additional 90 days. See Attachment D for extension request and NMOCD approval.

5. Soils Disposition and Backfill Activities

Between March 3 and April 17, 2023, approximately 660 cubic yards of impacted soils were transported offsite for disposal at R360's Red Bluff Facility, for final disposition. Manifests are available upon request and are not included in this report due to the size of the file. Upon completion of the excavation, the site was backfilled with like-sourced materials and brought back up to surface grade.

6. Closing and Deferral Request

Based on the assessment, remediation efforts, and requisite confirmation sampling, the Site is in compliance with NMOCD regulatory standards with the exception of soil sample SW-3 which could not be further remediated without destabilizing the tank battery. As such, soil sample HD-1 @ 0-6" was collected to horizontally delineate the area near SW-3. Analytical results indicated HD-1 exhibited concentrations below Table I Closure Criteria for benzene, BTEX, TPH, and chlorides. Deferral Sample HD-2 was collected south of the flare trailer because excavation near sidewall sample SW-10 was not possible without encroachment upon the flare trailer which is critical to site operations. Therefore, approximately six (6) feet of impacted soil was left in-situ at the site around the flare trailer. The Release Notification, Site Assessment/Characterization, Remediation Plan, and Closure portions of form C-141 are attached to the front of the report. Based upon supporting documentation provided in this report, NTGE, on behalf of Earthstone, respectfully requests closure with a deferral of soils left in-situ and no further regulatory actions for nAPP2300658682.

If you have any questions or comments concerning this Site Characterization and Closure/Deferral Report, please do not hesitate to contact us at (432)-685-3898.

Sincerely,

NTG Environmental

rhamlet	Earthstone's deferral requests deferral of final remediation for Incident Number NAPP2300658682 until decommissioning and abandonment of the facility. NTG Environmental and Earthstone do not believe deferment will result in imminent risk to human health, the environment, or groundwater. The areas requested for deferral are the impacted soil around the tank battery and flare trailer (Figure 4), which include sample areas (SW-3 and SW-10). The areas have been delineated and documented in the report. At this time, OCD approves this request. The Deferral Request and C-141 will be accepted for record. The release will remain open in OCD database files and reflect an open environmental issue.	12/19/2023
