Pima Environmental Services, LLC (Pima) has been contracted by Armstrong Energy Corporation to perform a spill assessment, remediation activities, and submit this closure report for two overlapping crude oil releases at the State 3 #001 (State) site. The initial C-141 was submitted on April 3, 2024 (Appendix C). This incident was assigned Incident ID NAPP2408179114, by the New Mexico Oil Conservation Division (NMOCD).

Site Characterization

The State 3 #001 is located approximately two and a half (2.5) miles east of Lovington, NM. This spill site is in Unit D, Section 12, Township 16S, Range 36E, Latitude 32.9383049, Longitude -103.306366, Lea County, NM. Figure 1 references a Location map.

Per the New Mexico Bureau of Geology and Mineral Resources, the geology is Alluvial and Eolian deposits (Lower Pliocene to middle Miocene). The soil in this area is made up of Kimbrough gravelly loam, 0 to 3 percent slopes according to the United States Department of Agriculture Natural Resources Conservation Service soil survey (Appendix B). The drainage courses in this area are well-drained. There is a low potential for karst geology to be present around State 3 #001 (Figure 3).

Based on the well water data from the New Mexico Office of the State Engineer water well (RA 15209 POD1), the depth to the nearest groundwater in this vicinity measures 110 feet below grade surface (BGS), positioned roughly 0.18 miles away from the State, drilled on December 17, 2021. Conversely, as per the United States Geological Survey well water data (USGS325541103173801), the nearest groundwater depth in this region is recorded at 86 feet BGS, situated approximately 0.72 miles away from the State, with the last gauge conducted on December 18, 2015. For detailed references to water surveys and the precise locations of water wells, please refer to Appendix A, inclusive of the relevant maps. Notably, the State is situated within an area with a low potential for karst, as illustrated in Figure 3. Additionally, a comprehensive Topographic Map is available for reference in Figure 2.

Release Information

NAPP2408179114: On March 21, 2024, an oil production tank battery developed a hole in its bottom, causing oil to drain into the containment area. All the fluid remained within the containment, with approximately 275 barrels of crude oil being released. Of this, 123 barrels were recovered using a vacuum truck, resulting in a total loss of 152 barrels. A site map outlining the release area can be found in Figure 4.

nPRS0505531372: On October 13, 2004, a valve on a production tank had a handle but no bull plug. Cows kicked the valve open, leading to the removal of the valve handle. A firewall and fence were constructed around the tank. In the immediate area around the tank and off location, approximately 90x12 feet, a truck was used to collect free fluid and a loader was employed to remove the soil, which was then hauled to a land farm. Approximately 240 barrels of crude oil were released into the lined containment, and 75 barrels were recovered, resulting in a total loss of 165 barrels of crude oil. Since the release in 2004, the tank battery has been relocated. The area that was previously off-pad now overlaps with the location of the current tank battery containment. For reference, please see Figure 5.

Site Assessment and Soil Sampling Results

From March 22 through April 3, 2024, Armstrong Energy conducted an urgent excavation of the affected area within the lined containment to prevent crude oil from seeping further into the soil. They used a track hoe and belly dumps to remove the contaminated material from the site. The excavation covered approximately 4,500 square feet and reached a depth of 8 feet below ground surface (bgs). In total, 1,300 cubic yards of contaminated material were removed and transported to an NMOCD-approved landfill for disposal.

On April 5, 2024, Armstrong Energy proactively submitted a 48-hour sampling notification as part of the preliminary preparations leading up to the final confirmation sampling event. This precautionary step was taken with the expectation that all sampling results would fall below the closure criteria established by the New Mexico Oil Conservation Division (NMOCD). Should the results confirm compliance, the plan is to move forward with the closure process. For additional details, the 48-hour notification can be referenced in Appendix C.

On April 8, 2024, Pima Environmental collected 25 composite bottom samples (labeled CS1-CS25) and 8 composite sidewall samples (labeled CSW1-CSW8). All confirmation samples consist of a five-point composite sample from the excavated area. The bottom samples were collected at a depth of 8 feet below ground surface (bgs), while all sidewall samples were collected from depths ranging from the surface to 8 feet bgs. Each bottom sample represented no more than 200 square feet of the excavated area, and each sidewall sample represented no more than 50 linear feet. The soil samples were bagged, placed on ice, and transported to Envirotech in Farmington, NM, for analytical analysis. The laboratory results from this sampling event are presented in the following data table. Figure 7 provides a confirmation site map showing the location of each soil sample.

On April 30 and May 1, 2024, Pima Environmental returned to the site to collect delineation samples following the excavation. We collected ten vertical delineation samples (labeled VD1-VD10) from the bottom of the excavation at a depth of 11 feet below ground surface (bgs). These samples were taken using a hand auger and extended below the 8-foot excavation mark to find soil samples with analytical levels below the 600/100 criteria set by the NMOCD. Additionally, we collected eight horizontal delineation samples (labeled HD1-HD8) at depths of 1 foot and 2 feet bgs. These horizontal samples were collected outside of the excavated area to achieve full delineation below the 600/100 mark. The soil samples were bagged, placed on ice, and transported to Envirotech in Farmington, NM, for analytical analysis. The laboratory results of this sampling event are presented in the following data table. Figure 6 provides a delineation site map indicating the location of each soil sample.

QUESTIONS (continued)

| | |
|--|---|
| Operator: ARMSTRONG ENERGY CORP P.O. Box 1973 Roswell, NM 88202 | OGRID: 1092 |
| | Action Number: 348250 |
| | Action Type: [C-141] Remediation Closure Request C-141 (C-141-v-Closure) |

QUESTIONS

| Nature and Volume of Release (continued) | |
|---|--|
| Is this a gas only submission (i.e. only significant Mcf values reported) | No, according to supplied volumes this does not appear to be a "gas only" report. |
| Was this a major release as defined by Subsection A of 19.15.29.7 NMAC | Yes |
| Reasons why this would be considered a submission for a notification of a major release | From paragraph A. "Major release" determine using: (1) an unauthorized release of a volume, excluding gases, of 25 barrels or more. |

With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.

| Initial Response | |
|---|----------------------|
| <i>The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.</i> | |
| The source of the release has been stopped | True |
| The impacted area has been secured to protect human health and the environment | True |
| Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices | True |
| All free liquids and recoverable materials have been removed and managed appropriately | True |
| If all the actions described above have not been undertaken, explain why | <i>Not answered.</i> |

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

| On what date will (or did) the final sampling or liner inspection occur | 04/08/2024 |
| On what date will (or was) the remediation complete(d) | 04/03/2024 |
| What is the estimated surface area (in square feet) that will be reclaimed | 0 |
| What is the estimated volume (in cubic yards) that will be reclaimed | 0 |
| What is the estimated surface area (in square feet) that will be remediated | 4500 |

These estimated dates and measurements are recognized to be the best guess or calculation at the time of submission and may (be) change(d) over time as more remediation efforts are completed.

The OCD recognizes that proposed remediation measures may have to be minimally adjusted in accordance with the physical realities encountered during remediation. If the responsible party has any need to significantly deviate from the remediation plan proposed, then it should consult with the division to determine if another remediation plan submission is required.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Remediation Closure Request

Only answer the questions in this group if seeking remediation closure for this release because all remediation steps have been completed.

| | |
|--|---|
| Requesting a remediation closure approval with this submission | Yes |
| Have the lateral and vertical extents of contamination been fully delineated | Yes |
| Was this release entirely contained within a lined containment area | No |
| All areas reasonably needed for production or subsequent drilling operations have been stabilized, returned to the sites existing grade, and have a soil cover that prevents ponding of water, minimizing dust and erosion | Yes |
| What was the total surface area (in square feet) remediated | 4500 |
| What was the total volume (cubic yards) remediated | 1300 |
| All areas not reasonably needed for production or subsequent drilling operations have been reclaimed to contain a minimum of four feet of non-waste contain earthen material with concentrations less than 600 mg/kg chlorides, 100 mg/kg TPH, 50 mg/kg BTEX, and 10 mg/kg Benzene | Yes |
| What was the total surface area (in square feet) reclaimed | 0 |
| What was the total volume (in cubic yards) reclaimed | 0 |
| Summarize any additional remediation activities not included by answers (above) | From March 22 through April 3, 2024, Armstrong Energy conducted an urgent excavation of the affected area within the lined containment to prevent crude oil from seeping further into the soil. They used a track hoe and belly dumps to remove the contaminated material from the site. The excavation covered approximately 4,500 square feet and reached a depth of 8 feet below ground surface (bgs). In total, 1,300 cubic yards of contaminated material were removed and transported to an NMOCD-approved landfill for disposal. |

The responsible party must attach information demonstrating they have complied with all applicable closure requirements and any conditions or directives of the OCD. This demonstration should be in the form of a comprehensive report (in .pdf format) including a scaled site map, sampling diagrams, relevant field notes, photographs of any excavation prior to backfilling, laboratory data including chain of custody documents of final sampling, and a narrative of the remedial activities. Refer to 19.15.29.12 NMAC.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. The responsible party acknowledges they must substantially restore, reclaim, and re-vegetate the impacted surface area to the conditions that existed prior to the release or their final land use in accordance with 19.15.29.13 NMAC including notification to the OCD when reclamation and re-vegetation are complete.
