NMOCD:

Amerede II, LLC submits this characterization and remediation plan for the above referenced incidents.

Incident # nAPP2416135052 occurred on June 6, 2024 when a Cudd Blender operator overflowed the tub during wireline operations (during active frac operations). The release was estimated at 6 bbls with 5 bbls recovered. Incident nAPP2416148867 occurred on June 8, 2024 when a Cudd Blender operator overflowed the tub during frac stage. The release was estimated at 65 bbls with 60 bbls, rapidly recovered. The second release comingled with and extended over the entire first release extent.

Incident # nAPP2416148867 was reported as a major release based on volume (> 25 bbls) on June 9, 2024.

Communication with NMOCD directed including both comingled releases in the same report, with separate online submission of the report for each incident. Communications are included in Appendix A.

## 1. Characterization

The following table and sections address items as described in 19.15.29.11.A, paragraphs 1- 4. Please refer to Plates 2-9 for verification of setback criteria. Both releases occurred during frac operations and personnel could not access the area to assess the extent of the releases due to location of production equipment and health and safety concerns.

The horizontal extent of the release was assessed following completion of frac operations and was determined by visual observations while the release flow pattern was visible and mapped utilizing GPS technology with sub-meter accuracy. The extent was further evaluated with the use of an Electromagnetic Induction Survey used to measure apparent “soil salinity”. Figure 1 shows the comingled release extent.

## 1.2. Depth to Ground Water

The nearest depth-to-water measurement, dated 02/09/2023, relative to the release extent, is mapped on Plate 2. This borehole has been plugged. The Office of the State Engineer well log is attached in Appendix B:

- MISC-422 (CP-1952 POD 1) is located 1262 ft SW of the releases. Depth to water is greater than 101 feet below ground surface.

## 1.3. Soil/Waste Characteristics

The release occurred in an area where depth to water is greater than 100 ft below ground surface (bgs) on a well pad in use for oil and gas production.

The USDA Natural Resources Conservation Service (NRCS) soil survey<sup>1</sup> describes the upper 5-feet of lithology as Pyote soils and Dune land with 0-3 percent slope:

### Description of Pyote

- A - 0 to 30 inches: fine sand
- Bt - 30 to 60 inches: fine sandy loam

### Description of Dune land

- A - 0 to 6 inches: fine sand
- C - 6 to 60 inches: sandy loam

The lithology as described by the NRCS is consistent with observed lithology during sampling event at most sample points.

## 1.4 Site Delineation

Ameredev performed site characterization and delineation sampling on August 28 and 29, 2024. Samples obtained from CS-01, CS-02, CS-03 and CS-04 provided horizontal delineation. Samples obtained from CS-06, CS-07 and CS-08 provided vertical delineation. Vertical delineation at CS-05 was limited by hand auger refusal. Vertical delineation at the CS-05 location will be obtained at the time of remediation.

- Sample point coordinates are located in Table A
- Characterization/delineation sample point locations are shown in Plate 10
- Summary of Analytical is shown in Table B
- Certificates of Analysis are located in Appendix C

Closure Criteria for releases on-site at an active production site for oil and gas operations, where depth to water is > 100 ft and based on above setback data; closure criteria per Table 1 of 19.15.29 NMAC are:

- Chloride < 20,000 mg/kg
- TPH (GRO + DRO + MRO) < 2,500 mg/kg
- TPH (GRO + DRO) < 1,000 mg/kg
- BTEX < 50 mg/kg
- Benzene < 10 mg/kg

Review of analytical reveals that the areas of concern center around

- CS-05, where chloride is constituent of concern, meeting closure criteria as defined above at 2 ft bgs.
- CS-07, where TPH is the constituent of concern, meeting closure criteria as defined above at 2 ft bgs.

## 2. Remediation Plan

Remediation Plan	
Requesting a remediation plan approval with this submission?	Yes
Have the lateral and vertical extents of the contamination been fully delineated ( <i>attach report demonstrating lateral and vertical extents</i> )?	Yes

• Chloride	40,000
• TPH (DRO+GRO+MRO)	1777
• GRO+DRO	1350
• BTEX	<0.3
• Benzene	<0.05
On what estimated date will the remediation commence	11/04/2024
On what date will (or did) the final sampling or liner inspection occur	11/11/2024
On what date will (or was) the remediation completed	11/18/2024
What is the estimated surface area (in square feet) that will be reclaimed	1750
What is the estimated volume (in cubic yards) that will be reclaimed	130
What is the estimated surface area (in square ft) that will be remediated	1750
What is the estimated volume (in cubic yards) that will be remediated	130
The remediation will (or is expected to) utilize the following processes to remediate/reduce contaminants:	
• Excavation and off-site disposal	Yes

Ameredev proposes that remediation activities will commence by 11/04/2024 or within 60 days of remediation plan approval. All soils impacted to a level above closure criteria for on site use will be excavated and hauled off site to an approved disposal facility. It is anticipated that the remediation and restoration process will take 2 weeks.

Excavation will be centered around the two areas of concern noted above and will extend outwards until all base and wall samples meet above closure criteria. Five-point composite confirmation samples will be obtained from base and wall areas where excavation occurs and analyzed for constituents of concern listed on Table 1 19.15.29 NMAC of with all base and wall sample grids not exceeding 200 sq ft.

To meet closure criteria requirements, it is anticipated that excavation will occur to a depth of 2 feet. It is estimated that excavation around CS-05 may include an area of 1000 sq ft, and excavation around CS-07 may include 750 sq ft for a total of 3500 cubic feet. It is estimated that

130 cubic yards of impacted material will be removed from the site. Estimation is based on available delineation sample analytical.

When remediation and confirmation sampling is complete, the area will be backfilled with clean, soil with confirmed with sampling of backfill material for all constituents of concern.

### 3. Surface Restoration

The release extent will be restored per 19.15.29.13. A-C NMAC to prior condition as an active production site, and will be compacted, or otherwise stabilized and maintained in such a way as prevent ponding of water and to minimize dust and erosion. The release area will be reclaimed when the location is no longer in use for oil and gas operations to the original condition or final land use per 19.15.29.13.D NMAC.

Sincerely,

Andrew Parker  
Environmental Scientist

Good morning Laura,

From pg. 8 of the December 1, 2023 Public Notice, Cancellation of an incident applies in the following cases:

- o Association API#, Facility # were incorrectly recorded.
- o Locational Data, Unit Letter, Section, Township, Range, Latitude and Longitude incorrectly recorded.
- o Duplicate incidents were reported.
- o False incident or incident was not reportable.
- o Venting/Flaring event was incorrectly reported on C-141 and needs to be reported on C-129.
- o Responsible operator incorrectly reported.

Since these are two separate releases in the same location, the same report can be submitted for both but you will submit it for nAPP2416135052 and then nAPP2416148867, individually. Hope this helps!

Kind regards,

Shelly

NMOCD

Please advise as to approach to take for reporting 2 separate releases that occurred on the same location, within 2 days of each other.

6/6/2024 - nAPP2416135052 - 7 bbls produced water (6 bbls recovered)

6/8/2024 - nAPP2416148867 – 65 bbls produced water (60 bbls recovered)

The release on 6/8/2024 completely encompassed the area of the 6/6/2024 release, therefore the remediation effort for 6/8/2024 - nAPP2416148867 will be inclusive of the 6/6/2024 - nAPP2416135052 release extent.

Would NMOCD recommend cancelling 6/6/2024 - nAPP2416135052? Or include both releases as a part of the same report, with 2 separate submissions.

We look forward to your feedback.

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Please answer all the questions in this group (only required when seeking remediation plan approval and beyond). This information must be provided to the appropriate district office no later than 90 days after the release discovery date.

What is the shallowest depth to groundwater beneath the area affected by the release in feet below ground surface (ft bgs)	Between 100 and 500 (ft.)
What method was used to determine the depth to ground water	Direct Measurement
Did this release impact groundwater or surface water	No
<b>What is the minimum distance, between the closest lateral extents of the release and the following surface areas:</b>	
A continuously flowing watercourse or any other significant watercourse	Between 1000 (ft.) and ½ (mi.)
Any lakebed, sinkhole, or playa lake (measured from the ordinary high-water mark)	Between 1 and 5 (mi.)
An occupied permanent residence, school, hospital, institution, or church	Between 1 and 5 (mi.)

Incorporated municipal boundaries or a defined municipal fresh water well field	Between 1 and 5 (mi.)
A wetland	Between 1 and 5 (mi.)
A subsurface mine	Greater than 5 (mi.)
An (non-karst) unstable area	Greater than 5 (mi.)
Categorize the risk of this well / site being in a karst geology	Low
A 100-year floodplain	Between 1 and 5 (mi.)
Did the release impact areas not on an exploration, development, production, or storage site	No

**Remediation Plan**

Please answer all the questions that apply or are indicated. This information must be provided to the appropriate district office no later than 90 days after the release discovery date.

Requesting a remediation plan approval with this submission	Yes
Attach a comprehensive report demonstrating the lateral and vertical extents of soil contamination associated with the release have been determined, pursuant to 19.15.29.11 NMAC and 19.15.29.13 NMAC.	
Have the lateral and vertical extents of contamination been fully delineated	Yes
Was this release entirely contained within a lined containment area	No

**Soil Contamination Sampling:** (Provide the highest observable value for each, in milligrams per kilograms.)

Chloride	(EPA 300.0 or SM4500 Cl B)	40000
TPH (GRO+DRO+MRO)	(EPA SW-846 Method 8015M)	1777
GRO+DRO	(EPA SW-846 Method 8015M)	1350
BTEX	(EPA SW-846 Method 8021B or 8260B)	0
Benzene	(EPA SW-846 Method 8021B or 8260B)	0

Per Subsection B of 19.15.29.11 NMAC unless the site characterization report includes completed efforts at remediation, the report must include a proposed remediation plan in accordance with 19.15.29.12 NMAC, which includes the anticipated timelines for beginning and completing the remediation.

On what estimated date will the remediation commence	11/04/2024
On what date will (or did) the final sampling or liner inspection occur	11/11/2024
On what date will (or was) the remediation complete(d)	11/18/2024
What is the estimated surface area (in square feet) that will be reclaimed	1750
What is the estimated volume (in cubic yards) that will be reclaimed	130
What is the estimated surface area (in square feet) that will be remediated	1750
What is the estimated volume (in cubic yards) that will be remediated	130

These estimated dates and measurements are recognized to be the best guess or calculation at the time of submission and may (be) change(d) over time as more remediation efforts are completed.

The OCD recognizes that proposed remediation measures may have to be minimally adjusted in accordance with the physical realities encountered during remediation. If the responsible party has any need to significantly deviate from the remediation plan proposed, then it should consult with the division to determine if another remediation plan submission is required.
