Natural Gas Flared (Mcf) Details	Cause: Commissioning to Purge Pipeline (Any) Natural Gas Flared Released: 79 Mcf Recovered: 0 Mcf Lost: 79 Mcf.
Other Released Details	Not answered.
Additional details for Measured or Estimated Volume(s). Please specify	Not answered.
Is this a gas only submission (i.e. only significant Mcf values reported)	Yes, according to supplied volumes this appears to be a "gas only" report.

Venting or Flaring Resulting from Downstream Activity	
Was this vent or flare a result of downstream activity	No
Was notification of downstream activity received by this operator	Not answered.
Downstream OGRID that should have notified this operator	Not answered.
Date notified of downstream activity requiring this vent or flare	Not answered.
Time notified of downstream activity requiring this vent or flare	Not answered.

Steps and Actions to Prevent Waste	
For this event, this operator could not have reasonably anticipated the current event and it was beyond this operator's control.	True
Please explain reason for why this event was beyond this operator's control	Gas was routed to a portable flare when the caper lateral receiver was depressurized for a line tie-in. Gas was flared to minimize emissions and the line had to be depressurized to safely perform the tie in.
Steps taken to limit the duration and magnitude of vent or flare	Gas was flared until the line was depressurized. The emission event then ended. The tie in was then completed.
Corrective actions taken to eliminate the cause and reoccurrence of vent or flare	Gas was depressurized, and the emission event ended. The tie in was then completed and the line was put back in service.
