Introduction

On behalf of Devon Energy Production Corporation (Devon), New Tech Global Environmental, LLC (NTGE) has prepared this Site Characterization and Remediation Work Plan for submittal to the New Mexico Oil Conservation Division (NMCOD) District 2 Office in Artesia, New Mexico to document site assessment, remedial action activities, and sample analysis results for release numbers: nAPP2425341702 & nAPP2426476658– Red Bull 29 CTB 2 (Site). The Site is in Unit Letter N, Section 29, of Township 23 South and Range 35 East in Lea County, New Mexico. The GPS coordinates for the release site are 32.26943° N latitude and 103.39078° W longitude. The site location with respect to the nearest town is shown on Figure 1 and the topography of the area is shown on Figure 2.

Background

Release Incident ID: nAPP2425341702

Based on the Release Notification C-141 Form, the release was discovered on September 7, 2024, and was due to an equipment failure. Upon discovery, the Site was shut-in and repairs ensued. The spill resulted in a release of approximately nine (9) barrels (bbls) of produced water of which zero (0) bbls were recovered for an approximate net loss of nine (9) bbls of produced water.

Release Incident ID: nAPP2426476658

Based on the Release Notification C-141 Form, the release was discovered on September 20, 2024, and was due to an equipment failure. Upon discovery, the Site was shut-in and repairs were made. The spill resulted in a release of approximately five (5) barrels (bbls) of produced water of which two (2) barrels (bbls) were recovered, resulting in an approximate net loss of three (3) barrels (bbls) of produced water. The release areas are shown on Figure 3 & Figure 3A.

Groundwater and Site Characterization

Based on a review of the New Mexico Office of State Engineers and USGS databases, there is one known water well (CP-00614 POD-2) within a ½-mile radius of the Site with a recorded groundwater depth of three-hundred and twenty (320) feet below ground surface (ft bgs). No other receptors (playas, wetlands, waterways, lakebeds, or ordinance boundaries) are located within each specific boundary or distance from the Site. According to the Karst Potential Map, the Site is located within a Low Karst area. The Site characterization documentation (Points of Diversion, Karst Potential, Significant Watercourse Map, Wetlands Map, and FEMA Map) are attached to the report.

NTGE characterized the Site according to Table I, Closure Criteria for Soils Impacted by a Release, from the New Mexico Administrative Code (NMCA) Title 19, Chapter 15, Part 29, Section 12 (NMAC 19.15.29.12).

Initial Soil Delineation Assessment Summary and Findings

On September 13, 2024, NTGE conducted site assessment activities to assess the extent of impacts at the Site. Three (3) vertical sample points (V-1 through V-3) were installed within the release area, while five (5) horizontal sample points (H-1 through H-5) were installed adjacent to the NTGE Project No.: 249136

release area in order to characterize the impacts. Soil samples were collected at half-foot (0.5) to one (1) foot (ft) intervals from depths ranging from zero (0) to nine and a half (9.5) ft below ground surface (bgs) with a geotechnical hand auger. The hand auger was decontaminated with Alconox and deionized water between soil samples to prevent cross-contamination. Soil samples were placed directly into laboratory provided samples containers, placed on ice, and transported under proper chain-of-custody protocol to Cardinal Laboratories in Hobbs, New Mexico for analysis of benzene, toluene, ethylbenzene, and xylene (BTEX) (by EPA Method 8021B), total petroleum hydrocarbon (TPH) (by EPA method 8015 modified), and chloride (method SM4500Cl-B). Analytical results indicated Chloride concentrations were above NMOCD standards for 19.15.29.13 for reclamation at V-1 from surface to two and a half (2.5) ft bgs, V-2 and V-3 from surface to three and a half (3.5) ft bgs. Furthermore, TPH concentrations were above NMOCD standards for V-1 at surface to half a foot (0-0.5) ft bgs. All other analytes were below NMOCD standards.

On September 24, 2024, NTGE conducted site assessment activities to assess the extent of impacts at the Site. Two (2) vertical sample points (V-1 and V-2) were installed within the release area, while six (6) horizontal sample points (H-1 through H-6) were installed adjacent to the release area in order to characterize the impacts. Soil samples were collected at half-foot (0.5) to one (1) foot (ft) intervals from depths ranging from zero (0) eight and a half (8.5) ft below ground surface (bgs) with a geotechnical hand auger. The hand auger was decontaminated with Alconox and deionized water between soil samples to prevent cross-contamination. Soil samples were placed directly into laboratory provided samples containers, placed on ice, and transported under proper chain-of-custody protocol to Cardinal Laboratories in Hobbs, New Mexico for analysis of benzene, toluene, ethylbenzene, and xylene (BTEX) (by EPA Method 8021B), total petroleum hydrocarbon (TPH) (by EPA method 8015 modified), and chloride (method SM4500Cl-B). Analytical results indicated chloride concentrations were above NMOCD standards for V-1 from surface to six and a half (6.5) ft bgs, and V-2 from surface to three and half (3.5) ft bgs. Additionally, TPH concentrations were above NMOCD standards for V-1 at surface to half a foot (0-0.5) ft bgs. All other analytes were below NMOCD standards.

Analytical results are included in Table 1 for the two releases, while soil boring locations are shown on Figure 3 & Figure 3A. The laboratory reports containing analytical methods and chain-of-custody documents are attached to the report.

Proposed Work Plan

After receiving and evaluating the soil boring data, for release incident ID nAPP2425341702, which occurred on September 7, 2024, NTGE proposes to excavate the areas of V-1 to a depth of three (3) ft bgs and V-3 to a depth of four (4) ft bgs to ensure that the impacted soil has been removed from the Site. Approximately 71 cubic yards of impacted material will be excavated and transported offsite for disposal at an NMOCD approved landfill. The proposed excavation map is shown on Figure 4. The area of V-2 will be deferred due to on-site equipment and piping as outlined on Figure 4.

After receiving and evaluating the soil boring data, for release incident ID nAPP2426476658, which occurred on September 20, 2024, NTGE proposes to excavate the areas of V-1 to a depth of two (2) ft bgs and V-2 to a depth of four (4) ft bgs to ensure that the impacted soil has been removed from the Site. Approximately 64 cubic yards of impacted material will be excavated and

transported offsite for disposal at an NMOCD approved landfill. The proposed excavation map is shown in Figure 4A. The remaining impacts in the area of V-1 will be deferred as outlined on Figure 4A due to on-site equipment and piping.

Upon completion of the excavation, confirmation samples will be taken with a five (5) point composite sample and represent an area no greater than 200 square feet to comply with NMAC 19.15.23.12 and 19.15.29.13. Discrete soil samples will be collected from the sidewalls and bottom of the excavation if any staining is observed. All confirmation samples will be taken to a certified laboratory and analyzed for BTEX by EPA Method 8021B, TPH by EPA Method 8015B Modified and chloride by SM4500 Cl -B. If any of the confirmation samples collected exhibit concentrations above regulatory standards set by NMAC 19.15.23.12 and 19.15.23.13, the areas will be further excavated until concentrations are below Table I Closure Criteria.

Job Narrative 890-7319-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 10/29/2024 4:30 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was -5.8°C.

GC VOA

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics

Method 8015MOD_NM: The method blank for preparation batch 880-94386 and analytical batch 880-94393 contained Diesel Range Organics (Over C10-C28) above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 8015MOD_NM: The surrogate recovery for the blank associated with preparation batch 880-94386 and analytical batch 880-94393 was outside the upper control limits.

Method 8015MOD_NM: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-94386 and analytical batch 880-94393 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8015MOD_NM: Surrogate recovery for the following sample was outside control limits: V - 1 (890-7319-2). Evidence of matrix interferences is not obvious.

Method 8015MOD_NM: The surrogate recovery for the blank associated with preparation batch 880-94523 and analytical batch 880-94538 was outside the upper control limits.

Method 8015MOD_NM: An incorrect volume of surrogate spiking solution was inadvertently added the following samples: (LCS 880-94523/2-A) and (LCSD 880-94523/3-A). Percent recoveries are based on the amount spiked.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

Method 300_ORGFM_28D - Soluble: The Chloride matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 880-94433 and analytical batch 880-94449 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

The associated samples are: V - 1 (890-7319-2), (880-50438-A-11-A), (880-50438-A-11-B MS) and (880-50438-A-11-C MSD).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Hi Ethan,

Thank you for getting back to me on this one and providing the photos/etc. to verify the location of the releases. Can you please email me the correct latitude and longitude of the release locations so that the incidents can be updated to reflect this? Also, when you submit your closure reports/deferral requests please ensure the correct lat and long are updated in the reports themselves. That will be all that is needed to address this.

Kind regards,

Shelly

We have attached both the satellite imagery along with the NMOCD wells map that currently shows the incorrect site location, which has no visible equipment on the pad, along with the spill reference materials that Devon provided for us which indicates that the spill occurred on the pad to the northeast of the GPS coordinates that were written on the C-141.

After referencing additional field information collected on the initial site visit it is clear that the C-141 coordinates are incorrect. Please let us know how you want to proceed.

Hi Ethan,

I am reviewing the submitted remediation plans for Red Bull 29 CTB 2 and the location of both releases entered in the initial C-141 puts it here: 32.26943,-103.39078

However the figures provided look like they are located .35 miles to the northeast of there-on the pad located at top right of screenshot. Also the photographs provided were taken at that location to the northeast. Can you please explain?

Kind regards,

Shelly

Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	No
Reasons why this would be considered a submission for a notification of a major release	Unavailable.

With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.

The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	Not answered.

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
