**Re: Deferral Request Addendum
Rustler Breaks 2 Booster Station
Incident Numbers nAPP2321360002
Eddy County, New Mexico**

To Whom It May Concern:

Ensolum, LLC (Ensolum), on behalf of Matador Production Company (Matador), has prepared this *Deferral Request Addendum (DRA)* to document excavation and soil sampling activities performed at the Rustler Breaks 2 Booster Station (Site). The purpose of the excavation and soil sampling activities was to address impacts to soil following a release of produced water onto the well pad. Based on field observations following excavation, field screening activities, and soil sample laboratory analytical results, Matador is submitting this *Deferral Request Addendum*, describing Site assessment and excavation activities that have occurred and requesting deferral of final remediation for Incident Number nAPP2321360002 until the Site is reconstructed and/or the booster pad is abandoned.

SITE DESCRIPTION AND RELEASE SUMMARY

The Site is located in in Unit E, Section 06, Township 24 South, Range 28 East, in Eddy County, New Mexico (32.25081°, -104.13487°) and is associated with oil and gas exploration and production operations on private land.

On February 20, 2023, the discharge pump bracket failed causing the release of approximately 32 barrels (bbls) of produced water to the pad surface and slightly off-pad; released fluids were not recovered. Matador reported the release to the New Mexico Oil Conservation Division (NMOCD) on a Release Notification Form C-141 (Form C-141) on August 2, 2023, which is included in Appendix A. The release was assigned Incident Number nAPP2321360002.

On November 8, 2024, Ensolum submitted a *Deferral Request (DR)* to the New Mexico Oil Conservation Division (NMOCD); however, the DR was denied by the NMOCD for the following reasons:

- *Deferral denied. At the top of pg. 3, it says SW09@0-10' and SW09@0-10'. Update this. Remediation on an active site can be deferred in areas immediately under or around production equipment such as production tanks, wellheads, and pipelines where remediation could cause a major facility deconstruction so long as the contamination is fully delineated and does not cause an imminent risk to human health, the environment, or ground water. FS23, though vertically delineated, has not been horizontally delineated. No sidewall sample was collected around this part of the excavation and as such we don't exactly know how big of an area still needs remediation.*

This DRA addresses NMOCD's concerns regarding additional delineation sampling around the area of requested deferral and the text listing side wall samples (SW08 and SW09) on page 3 was corrected.

SITE CHARACTERIZATION AND CLOSURE CRITERIA

The Site was characterized to assess the applicability of Table I, Closure Criteria for Soils Impacted by a Release, of Title 19, Chapter 15, Part 29 (19.15.29) of the New Mexico Administrative Code (NMAC). Results from the characterization desktop review are presented on page 3 of the Form C-141, Site Assessment/Characterization.

The closest permitted groundwater well with depth to groundwater data is New Mexico Office of the State Engineer (NMOSE) well C 04085 POD 2, located approximately 0.9 miles north of the Site. The well had a reported depth to groundwater at 100 feet below ground surface (bgs) and a total depth of 240 feet bgs. All wells used for depth to groundwater determination are presented in Figure 1. The referenced well record is included in Appendix B.

The closest continuously flowing or significant watercourse to the Site is a dry wash, located approximately 0.83 miles east of the Site. The Site is greater than 200 feet from a lakebed, sinkhole, or playa lake and greater than 300 feet from an occupied residence, school, hospital, institution, church, or wetland. The Site is greater than 1,000 feet to a freshwater well or spring and is not within a 100-year floodplain or overlying a subsurface mine. The Site is underlain by unstable geology (high potential karst designation area). Site receptors are identified in Figure 1.

Based on the results of the Site Characterization, the following NMOCD Table I Closure Criteria (Closure Criteria) apply:

- Benzene: 10 milligrams per kilogram (mg/kg)
- Benzene, toluene, ethylbenzene, and total xylenes (BTEX): 50 mg/kg
- Total petroleum hydrocarbons (TPH): 100 mg/kg
- Chloride: 600 mg/kg

DELINEATION AND EXCAVATION SOIL SAMPLING ACTIVITIES

On August 21, 2023, September 5, 2023, and August 5, 2024, Site assessment activities were conducted to evaluate the release extent based on information provided on the Form C-141 and visual observations. Six preliminary assessment soil samples (SS01 through SS06) were collected around the release extent at ground surface to assess the lateral extent of the spill area. One borehole (BH01) was advanced via hand auger, one borehole (BH02) was advanced via backhoe, and one borehole (BH03) was advanced via a backpack drill within the release extent to assess the vertical extent of soil. Borehole BH01 was advanced to a depth of 2 feet bgs, borehole BH02 was advanced to a depth of 10 feet bgs, and BH03 was advanced to a depth of 5.5 feet bgs. The preliminary assessment soil samples were field screened for TPH using a PetroFLAG® soil analyzer system and chloride using Mohr method titration. The release extent and preliminary soil sample locations were mapped utilizing a handheld Global Positioning System (GPS) unit and are depicted on Figures 2. Photographic documentation was collected, and a photographic log is included in Appendix C.

The delineation soil samples were placed directly into pre-cleaned glass jars, labeled with the location, date, time, sampler name, method of analysis, and immediately placed on ice. The soil samples were transported under strict chain-of-custody procedures to Envirotech Laboratory Analysis (Envirotech) in

Farmington, New Mexico, for analysis of the following constituents of concern (COCs): BTEX following United States Environmental Protection Agency (EPA) Method 8021B; TPH-gasoline range organics (GRO), TPH-diesel range organics (DRO), and TPH-oil range organics (ORO) following EPA Method 8015M/D; and chloride following EPA Method 300.0.

From November 20 through November 29, 2023, and August 5 through August 6, 2024, Ensolum personnel were onsite to oversee the excavation and removal of impacted and waste-containing soil at the Site. Excavation activities were performed using a backhoe and transport vehicles. The excavation occurred on-pad, in the pasture area south of the pad, and west-southwest following the pipeline right-of-way (ROW). To direct excavation activities, soil was screened for chloride using the Mohr method titration.

Ensolum personnel returned to the Site on September 3, 2024, to excavate the remaining waste-containing soil identified at a depth greater than 2 feet bgs in borehole (BH02). Ensolum personnel excavated confirmation sample area FS17 (BH02) to a depth of 10 feet bgs. Ensolum personnel collected two 5-point composite samples (SW08@0-10' and SW09@0-10') from the sidewalls of confirmation sample area FS17.

On November 11, 2024, Ensolum personnel returned to the Site to collect additional delineation samples around the area of requested deferral. Three additional delineation soil samples (SS07 through SS09) were collected around the area of requested deferral (confirmation soil sample location FS23) at ground surface to assess the lateral extent of the spill area. The soil samples were field screened for chloride using Mohr method titration. The soil sample locations were mapped utilizing a handheld GPS unit and are depicted on Figures 2. Photographic documentation was collected, and a photographic log is included in Appendix C.

The Site excavation area measured approximately 7,929 square feet. A total of approximately 1,379 cubic yards of soil was removed from the excavation area. The soil was transported and properly disposed of at the R360 Hobbs Facility in New Mexico.

Following removal of impacted and waste-containing soil, 5-point composite soil samples were collected at least every 200 square feet from the floor of the excavation and every 200 feet from the sidewalls of the excavation. The 5-point composite samples were collected by placing five equivalent aliquots of soil into a 1-gallon, resealable plastic bag and homogenizing the samples by thoroughly mixing. Excavation floor soil samples FS01 through FS40 were collected at depths ranging from 1-foot to 6.5 feet bgs and excavation sidewall soil samples (SW01 through SW07) were collected at depths ranging from the ground surface to 6 feet bgs. The excavation extent and excavation soil sample locations are presented on Figure 3.

LABORATORY ANALYTICAL RESULTS

Laboratory analytical results for preliminary assessment soil samples (SS01 through SS06) indicated all COC concentrations were in compliance with the Site Closure Criteria at ground surface. Laboratory analytical results from boreholes BH01 and BH02 indicated the presence of elevated chloride concentrations at the ground surface. Laboratory analytical results from borehole BH01 indicated soil impacts from the produced water release did not extend below 2 feet bgs; however, chloride concentrations at depths greater than 2 feet bgs in sample location BH02 exceeded the Site Closure Criteria. Laboratory analytical results for preliminary assessment soil samples are summarized in Table 1.

Laboratory analytical results for excavation floor samples and excavation sidewall samples were all in compliance with the Site Closure Criteria and with the reclamation requirement except for FS23,

collected at 4-feet bgs. Delineation soil sample collected at 4.5 feet and 5.5 feet bgs in sample location BH03 were collected to verify the vertical extent of the Area of Requested Deferral. Laboratory analytical results from FS17@10' and sidewall samples (SW08@0-10' and SW09@ 0-10') were all below the Site Closure Criteria. The laboratory analytical results are summarized in Tables 2 and 3 and the complete laboratory analytical reports are included in Appendix D. All sampling notifications to NMOCD and additional correspondence is included in Appendix E.

DEFERRAL REQUEST

Matador is requesting deferral of final remediation due to the presence of active production equipment, process piping, and the supports beneath them, preventing full excavation of impacted soil. The estimated area of remaining impacted soil measures approximately 200 square feet, and assuming a depth of up to 4.5 feet bgs under the electrical panels and pumps based on the analytical results from surrounding confirmation samples and 4 feet bgs in sample area FS23 based on delineation borehole BH03, a total of approximately 4 cubic yards of impacted soil remains in place. Soil in the vicinity of floor confirmation soil sample FS23 are included in this deferment request due to the proximity of production equipment and safety concerns of excavating deeper, which has the potential to destabilize the equipment and harm workers and/or the environment. The deferral area and delineation soil samples are depicted on Figure 4.

Impacted soil is limited to the area beneath active production equipment, where remediation would require a major facility deconstruction. The release extent has been laterally delineated by delineation soil samples SS01 through SS09 at 0 feet bgs and vertically delineated by borehole samples BH01 at 2 feet bgs, BH02 at 2 feet bgs and borehole sample BH03 at 4.5 feet bgs.

Matador does not believe deferment will result in imminent risk to human health, the environment, or groundwater. Depth to groundwater was determined to be 100 feet bgs, and all accessible impacted soil was removed to the maximum extent practicable (MEP) during the excavation activities. Based on the presence of active production equipment within the release area and the complete lateral and vertical delineation of impacted soil remaining in place, Matador requests deferral of final remediation for Incident Number nAPP2321360002 until final reclamation of the well pad or major construction, whichever comes first.

Was this a major release as defined by 19.15.29.7(A) NMAC? ☒ Yes ☐ No	If YES, for what reason(s) does the responsible party consider this a major release? Volume exceeded 25 bbls.
If YES, was immediate notice given to the OCD? By whom? To whom? When and by what means (phone, email, etc)? Immediate notice was given to NMOCD on 08/01/2023 via website.	

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury

☒ The source of the release has been stopped. ☒ The impacted area has been secured to protect human health and the environment. ☒ Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices. ☒ All free liquids and recoverable materials have been removed and managed appropriately.	
If all the actions described above have <u>not</u> been undertaken, explain why:	
Per 19.15.29.8 B. (4) NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please attach a narrative of actions to date. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see 19.15.29.11(A)(5)(a) NMAC), please attach all information needed for closure evaluation.	
I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Site Assessment/Characterization

This information must be provided to the appropriate district office no later than 90 days after the release discovery date.

What is the shallowest depth to groundwater beneath the area affected by the release?	_____ (ft bgs)

Are the lateral extents of the release within 300 feet of a continuously flowing watercourse or any other significant watercourse?	☐ Yes ☐ No
Are the lateral extents of the release within 200 feet of any lakebed, sinkhole, or playa lake (measured from the ordinary high-water mark)?	☐ Yes ☐ No
Are the lateral extents of the release within 300 feet of an occupied permanent residence, school, hospital, institution, or church?	☐ Yes ☐ No
Are the lateral extents of the release within 500 horizontal feet of a spring or a private domestic fresh water well used by less than five households for domestic or stock watering purposes?	☐ Yes ☐ No
Are the lateral extents of the release within 1000 feet of any other fresh water well or spring?	☐ Yes ☐ No
Are the lateral extents of the release within incorporated municipal boundaries or within a defined municipal fresh water well field?	☐ Yes ☐ No
Are the lateral extents of the release within 300 feet of a wetland?	☐ Yes ☐ No

Did the release impact areas not on an exploration, development, production, or storage site?	☐ Yes ☐ No

Attach a comprehensive report (electronic submittals in .pdf format are preferred) demonstrating the lateral and vertical extents of soil contamination associated with the release have been determined. Refer to 19.15.29.11 NMAC for specifics.

Characterization Report Checklist: <i>Each of the following items must be included in the report.</i> ☐ Scaled site map showing impacted area, surface features, subsurface features, delineation points, and monitoring wells.☐ Field data☐ Data table of soil contaminant concentration data☐ Depth to water determination☐ Determination of water sources and significant watercourses within ½-mile of the lateral extents of the release☐ Boring or excavation logs☐ Photographs including date and GIS information☐ Topographic/Aerial maps☐ Laboratory data including chain of custody

If the site characterization report does not include completed efforts at remediation of the release, the report must include a proposed remediation plan. That plan must include the estimated volume of material to be remediated, the proposed remediation technique, proposed sampling plan and methods, anticipated timelines for beginning and completing the remediation. The closure criteria for a release are contained in Table 1 of 19.15.29.12 NMAC, however, use of the table is modified by site- and release-specific parameters.

QUESTIONS

Nature and Volume of Release (continued)	
Is this a gas only submission (i.e. only significant Mcf values reported)	No, according to supplied volumes this does not appear to be a "gas only" report.
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	Yes
Reasons why this would be considered a submission for a notification of a major release	From paragraph A. "Major release" determine using: (1) an unauthorized release of a volume, excluding gases, of 25 barrels or more.
With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.	

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.

The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	Not answered.

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

I hereby agree and sign off to the above statement	Name: Jason Touchet Title: EHS Field Rep Email: jason.touchet@matadorresources.com Date: 12/10/2024
